American Railroad Journal.

Saturday, February 28, 1863.

Stock Exchange and Money Market.

If it were not for the rise in gold, and the violent fluctuations which attend its sales, we should be able to pronounce the financial policy of the Government, and the financial condition of the Country under all the circumstance of the case, an unparallelled and brilliant success. We have borrowed no money from abroad, have asked no foreign assistance; on the contrary we have redeemed our own stocks out of the hands of the timid foreign holders, and continued to export gold without an effort to withhold it. Whether any other country could have gone on for two such years, under such difficulties as we have experienced, is very questionable.

It is then very proper for us to consider the reality of this disturbing element, the rise of gold, and see what really its essentials are, and how far its movements determine the stability of other commodities. Our readers will remember that many weeks ago we hazarded the opinion, that we saw no reason why it should not rise to 200; and as on Tuesday it jumped 7 per cent, and now stands at 173½, we are inclined to think our prediction is fast approaching verification. The reasons are several. It is a commodity of small comparative amount, if we regard the enormous values which are created and exist around us in the shape of real and personal property, and it requires but few combinations to manage it. In this city about one hundred dealers, according to

a cotemporary, control the whole business, and strange to say, these merchants in gold, do the largest part of it through the means of paper. A certificate of deposit of ten thousand dollars has been known to be used fifteen times in the course of a single day, and the quotations of the transfers have gone forth to the world as evidences of actual sales, when the gold itself never left the bank where it was deposited.

We have all along maintained, though the price of gold advances, it can not be said it causes the depreciation of other properties, nor is it true to the extent maintained, that inflation of prices follows, as an immediate consequence, the substitution of a paper currency. At least it has not so happened up to this time in this Country. The most important articles of our own production are still in abundance, and are at former prices. Articles of foreign production and subject to duty may be expected to increase in price to the consumer, just as they did under our high tariffs of former years in times of peace. But let us subject this one idea, that our currency has depreciated to the extent of the premium on gold paid in that currency, to a simple and common sense view of the subject. And for this purpose we quote from the columns of a cotemporary, distinguished for its long continued and able support of the hard money theories of Benton and others, the following passages. Nothing can be clearer than the following:

"Prices of some things have risen, it is true, but not of all, and the relation of supply to demand has left nearly or quite undisturbed the old relation between a paper dollar and a large number of articles of prime necessity, of which it will suffice to name beef, mutton, pork, potatoes, apples, use of real estate, &c. Any or all of those can be had now for "greenbacks" at as low rates as they could have been bought two years since for gold.

The absurdity of insisting that the government currency is depreciated because it requires more dollars of it to buy some things now than were formerly required in gold to buy the same things or quantities of things, is most forcibly illustrated by the following comparison of prices in gold for the articles named, before the issue of government currency and now, reckoning gold at 150 as compared with government currency:

	Former prices in gold.	Present price in gold.	Depreciation in gold, from whatever cause.
Cotton....	13	50	285 per cent.
Coffee.....	22	80	36 ..
Coal.....	$4 20	$5 67	35 ..
Old paper.	1	5⅓	433 ..
Stocks:			
Pacific Mail	50	1 19	138 ..
N. Y. Cent.	50	80	60 ..
Erie.....	4	50	1150 ..

Of what value would that man's opinion on the subject be, who should assert that gold had depreciated to the extent of the above figures, because more dollars of it are required now to buy a given quantity of some articles than formerly; who should gravely argue that gold had depreciated 1150 per cent., because formerly but $4 of it were required to buy a share of Erie, while now $50 of it are required to buy the same thing. Yet this is precisely and the only mode by which it can be shown that the government currency has been depreciated.

We have not space to follow up these facts to their legitimate conclusions at this time, but will reserve them for another opportunity with the assertion, that they are the key to many of our apparent difficulties in financial speculation.

The term "depreciated" cannot be properly applied to a legal-tender currency, issued for a full consideration by competent authority, until it can be shown that all prices as measured by it have advanced in direct ratio to the alleged depreciation, without reference to the relation of supply of commodities to the demand for them, and the term can never be properly applied to such a currency by comparing it with any one commodity as a standard—with gold, for example, at the present time, that being now simply a commodity having ceased to be money except for three purposes, in which it is still received and paid practically at nearly its former rates. Gold has been demonetized by Congress, except for the payment of duties, the interest on the public debt and the settlement of foreign balances, and by the substitution of legal-tender currency is no longer the standard for the settlement of debts in this country or the payment of state or national taxes; and there is and can be no more propriety in reckoning the price of government stocks by the standard of gold, under such circumstances, than by the standard of cotton, or of any other commodity the relative price of which has advanced, from whatever cause, as compared with government stocks. It is true that government currency or stocks will not buy as much gold, or cotton, or Pacific mail, or Erie as formerly, but the same is true of gold as compared with cotton, &c.

There has been no over-issue of circulation, if, as is presumed, it is meant to say that more circulation has been issued than was needed for the legitimate purposes of trade. No stronger proof could be adduced to negative the assertion of over-issue, than that for the last eighteen months circulation or currency has been scarce to such a degree as to greatly embarass settlements with laborers, operatives and others requiring currency, the volume of business apparently having greatly exceeded the circulation in all parts of the country.

The facts are that the withdrawal of specie from circulation, the retention of the legal tender in the vaults of banks for the redemption of their issues (which the wants of trade have kept out) and the increase of cash transactions in place of those heretofore settled by notes, have more than counterbalanced the government issues and the increased bank issues, and it may be safely asserted that the present volume of business could not be conducted on a cash basis, without a greatly increased volume of circulation.

By the operation of one of the causes which has produced the same result in gold, showing that each is subject to the same laws, the government currency of the first issue has been practically demonetized, and therefore withdrawn wholly from circulation, and is now quoted at the same price as gold.

The Banking Association and uniform currency bill having become a law of the land is naturally attracting attention. As an evidence of public opinion that way, we state that an association of capitalists has so far assumed shape in this city, as to have presented itself in the form of a bank of twenty millions of dollars, and an eminent hard-money banker and President of a leading State institution has been offered the Presidency. The main features of the new bill as we understand them are these.

Any number of persons, not less than five, may associate, and after complying with certain formalities specified in the act, become a bank with any amount of capital not less than $50,000. Thirty per cent. must be paid in "at the time of the *commencement* of its banking business," and ten per cent. every sixty days thereafter until the whole capital is paid in. The powers granted to such institutions are large and liberal.

This step being taken, then to obtain notes of circulation, U. S. bonds bearing interest are to be transferred to the Treasury of the U. S., and therefor the Comptroller of the Treasury will issue notes to the extent of ninety per cent. on the par value of the bonds and not exceeding that limit, in denominations of $5, $10, $20, $50, $100, $500 and $1,000, properly engraved and certified. One per cent. is to be retained in the Treasury out of each yearly half dividend of interest in lieu of taxes on circulation, &c. The bills so issued are to be redeemed by the associations payable on demand "in lawful money of the U. S." (whatever that may be,) and shall be received at par in all payments of "taxes, excises, public lands, and all other dues to the U. S., except for duties on imports, and also for all salaries, debts and demands owing by the U. S. to individuals, corporations and associations, except interest on public debt." It will be observed that these notes are not a legal tender as between man and man.

The bill contains a large number of sections regulating every conceivable detail of business arising under its general provisions.

It would seem therefore, the system is an exceedingly favorable one to capitalists. It permits them to bank on their capital, gives an undisputed value to their notes, ensures their circulation everywhere, and makes them equal to gold in a vast number of transactions, where mere local currency would not circulate at all; and as long as U. S. legal tender notes remain, no specie is requisite for the redemption of the bills. When specie payments are resumed, and gold and silver become lawful tender only, assuming their old functions, they will fall to par, and the banks can resume redemption in that form.

In our next we shall consider various other financial topics of importance, (connected with Congressional legislation, for which to-day we have no room,) as well as the high and prosperous condition of our railway companies.

The following quotations of sales of Railway and other securities and in addition to those given elsewhere in our columns:—

Rotary Boiler.

We hear of a new application of the rotary system to the construction of boilers. A patent has been taken out by Dr. Grimaldi, in England, for a boiler to rotate on its axis over the furnace. It is claimed for this invention that it produces a rapid generation of steam, and its superiority over the old forms consists in saving fuel, weight, bulk and floor space and height from one-third to one-half. A 30 horse engine is to be placed on board a steamer for further demonstration.

Mechanical Power and Wealth of Great Britain.

If we wish to know why the power and wealth of Great Britain are so enormous, we may easily ascertain the reason. They are the result of the enormous use of steam power.

In mining and metal manufactures it is equal to	1,350,000 horses.
In navigation	2,550,000 "
Locomotives	3,000,000 "
In Manufactures	4,050,000 "
Total	10,950,000 horses.

As each horse power is estimated to be equal to that of five men, we find that in addition to the actual population of the Kingdon, there is a constant industrial power engaged in production of some sort or other, equivalent to 54,750,000 men! It is no wonder then that the country is growing so enormously wealthy, and is able to bear such a weight of taxation, and such a vastness of expenditure.

This is an element of strength which we have also in the United States, increasing every day, and which is giving to the North its immense preponderance of means and money, over the merely agricultural states of the confederacy.

Railways in Germany.

In 1861 there were completed and in use in Germany, 8,866 miles of railways, one-fourth of the distance being provided with a double track; 88 per cent of these belong to the Government; the whole worked by 19 Government Departments, and 43 boards of Directors. The cost per mile averaged £16,400 per mile. The rate of speed is

Express trains	27 to 35 miles.
Ordinary passengers	20 to 25 "
Freight trains	10 to 15 "

Galena and Chicago Union Railroad.

The earnings of the Galena and Chicago Union Railroad, in 1862, were as follows:

	Freight.	Passengers.	Mails.	Totals.
January	$84,759 09	$19,587 88	$5,520 21	$109,867 18
February	82,292 40	17,170 42	5,960 60	105,423 42
March	44,592 20	22,636 06	6,117 90	74,346 16
April	56,676 68	27,252 63	6,250 33	90,179 64
May	125,766 82	26,510 53	5,916 68	158,194 03
June	187,778 77	30,735 68	6,533 46	225,047 91
July	147,178 65	37,054 26	6,223 38	190,456 29
August	84,716 83	36,307 88	7,994 58	129,019 29

October	149,038 32	48,585 12	5,951 65	203,575 09
November	121,267 24	31,760 15	6,502 96	159,530 35
December	101,035 42	33,422 61	9,074 26	143,532 29
Totals	$1,308,847 98	$389,832 71	$78,860 73	$1,777,541 42

New London Northern Railroad.

The earnings of this road during the year, ending December 31, 1862, were as follows;

From passengers	$65,104 85
" freight	60,397 85
" mails and express	7,925 00
" rents, and all other sources	18,403 03
	$151,730 73

And the expenses were:

Repairs of road and bridges	$15,534 24	
" rolling stock	14,414 75	
Salaries and wages	24,772 76	
Fuel	12,775 50	
Oil and waste	2,433 29	
Other ordinary expenses	8,188 46	
New rails	7,613 58	
Rebuilding fences	2,963 67	
Rebuilding drawbridge	6,503 87	
Other extraord'ry expenses	5,877 30	
Taxes	3,238 15	
Rent to city of New London	3,000 00	
Interest	5,648 98	
		112,964 57
Balance net earning		$38,766 16
Dividend No. 2, July 1862, 2 per cent	$12,043 04	
Dividend No. 3, Jan. 1863, 3 per cent	18,163 56	
		30,106 60
Balance after dividends		$8,659 56
Add surplus last year		2,132 23
Total surplus		$10,791 79

—which has been used in paying the indebtedness of the company for building the wharf and depot for the steamboats at New London.

The cost of the wharf and depot as per last report was $85,396 53; present valuation, $75,400, which is represented by the company's indebtedness to the Savings Bank of $24,000, and 7 per cent bonds issued, $51,000.

The company hold in their possession $9,000 of the $60,000 created by the mortgage of May, 1861, which they have not found it necessary to use.

The indebtedness of the company to the Trustees of the N. L., W. & P. R. R. Co. for cancelled stock, has been reduced by the surrender of bonds, never subscribed, valued at $476, leaving $125 89 still due on the bond given said Trustees.

New iron to the extent of 335 tons has been purchased and laid, and 2,338 old rails have been repaired in the company's shop.

Number of miles run by trains, 156,905; passengers carried, 153,830; ton of freight, 73,572.

BALANCE SHEET, JANUARY 1, 1863.

Seven per cent bonds surrendered	$602,152 00
Stock cancelled	602 89
New wharf and depot	75,400 00
Due from U. S. Gov., etc	867 14
Cash on hand	17,805 70
	$696,826 73
Capital stock	$602,152 00
Seven per cent bonds	51,000 00
Loan from Savings Bank	24,400 00
Bond from cancelled stock	125 89
Sundry accounts	42 05
Dividends 1 and 2 unpaid	386 08
Dividend No. 3, Jan., 1863	18,063 56
Profit and Loss—surplus	657 15
	$696,826 73

President—HENRY P. HAVEN.
Superintendent—RICHARD N. DOWD.
Auditor—WM. H. BARNES.

Northern Pitch.

We learn that pitch made from our northern pine, is now beginning to be extensively used in place of the southern. It can be manufactured at less than one-third the cost of the latter article, and is now sold in the Boston market for $3 to $3.50 per bbl., while the southern is worth $18 to $20. We hope that our northern foresters will go into the business extensively.

Water-proof Cement Pipes.

We notice that a French patent for the manufacture of water-proof cement pipes, and water and air-proof pipes, each a new assistance in pipe laying, has become the property of Thurlow Weed, Esq., of Albany.

The Oil Market.

The substitution of mineral oils for those obtained from the whale has created a remarkable change in several important branches of industry and commerce. We have given from time to time, all the current information with regard to petroleum, but the following comprehensive circular for 1862, of Mr. F. S. Pease, of Buffalo, embraces the whole subject and others cognate, and is worthy of being preserved as a part of the commercial history of the day:

The Oil trade for the year 1862 has been marked with important changes; the reverse of 1861, it has received its proportion of speculative movements, to the joy of some and sorrow of not a few. The crude and raw material have been mostly cash; straight fixed oils have received marked attention at home and abroad, and notwithstanding the high prices in very many cases, the demand exceeded the supply for export. The absence of a "thousand and one" substitutes, which with men of ordinary sense, have about played out, has increased the demand for prime oils for all purposes. Our foreign demands were well supplied in the fall and winter of 1861.

The war prospects hastened and brought out from Europe unlimited orders for both Sperm and Whale, consequently our foreign orders in 1862 were not as large as they otherwise would have been.

Comparative prices of Oils are as follows:

	Jan. 1, 1860.	Jan. 1, 1862.	Jan. 1, 1863.
Sperm Oil (Nat. Winter)	$1 60	$1 75	$2 00
Elephant (W. B.)	80	85	1 15
Winter Refined Whale	75	75	1 00
Fall " "	70	70	90
Lard Oil, Winter	1 00	85	90
Lard Oil, Fall	90	80	85
Linseed Oil	60	95	1 30
Refined Petroleum	75	35	50

LARD AND OIL.

The demand throughout the year for prime Lard Oil has been exceedingly good. The consumption will not fall short of 50,000 gallons for home use and shipping, an excess over 1861 of some 30,000 gallons. The year commenced on low prices, with a steady increase to the close of the year, with a good export demand all the summer. The increase in the consumption of Lard for Candles, is over eight millions of pounds, as reported by the Cincinnati *Price Current*. The Foreign demand has been extraordinary, and although there is an increase in the yield of Lard of some 28,339,409 lbs. over last year—full prices may be expected, and an active demand for 1863. The average yield of Lard per hog 84 lbs, being 2 lbs over 1861. Yield of Lard some 97,649,691 lbs.

The export of Lard in barrels and kegs for 1862, was 139,596 bbls; 61,352 kegs, an excess over 1861 of 38,790 barrels, and 15,709 kegs. Taking the average price of Lard at Cincinnati, 7½c, the exports amount to $7,423,705 07.

Average amount of Lard in 1861	$6,217,322 84
Average amount in favor of 1862	1,206,382 23

LINSEED OIL.

The importation of Linseed to the Atlantic States for the year was less than in 1861, and shows a large falling off compared with previous years, and our prospective for '62 has been more than realized in regard to high prices. The importations of Linseed for the year were less than in 1861, and '61 was some 291,810 bags less than in 1860. The importations of Calcutta and Bombay seed for 1862 were not far from 285,776 bags, and 54,484 pockets. Total equal to 294,857 bags. The year opened on good prices, which rapidly advanced to its close, owing to the increased cost of importation. This advance in prices was never before known in the Linseed market.

The total consumption for the year is equal to 310,657 bags, being 115,857 bags less than in 1861.

Stock on hand, January 1, 1863, equal to 11,533 bags—the consumption exceeding the imports by 15,800 bags.

From Calcutta, we have on the way some 34,039 bags, and from Bombay 15,260 bags, and no more loading from either place at last reports.

Amount on hand January 1, and on the way, equal to 60,832 bags.

The small amount of oil to arrive and on hand in this country, and the small amount in England (being only 9 tuns,) must keep prices high for some considerable time, and we see no reason why it should not be for the season, even if the western crop is as good as is anticipated. Gold will govern the price of this product, as in other matters.

January 1, 1862, we had on hand in this country some 27,000 to 28,000 bags, and to arrive some 162,371 bags, equal in all to 190,371 bags.

This year, January 1, 1863, we have some 11,533 bags, and to arrive, 39,299—equal to 60,832, being 129,539 less than in 1862.

The highest price reached at the seaboard for seed was $3 40 per bushel, and lowest $2 05.

Price of oil—highest, $1 30; lowest, 75c.

Average value of consumption of seed, $714,511 10—seed at $2 30 per bushel. This is, notwithstanding the great deficiency of imports, an excess over 1861 of $38,846 41, owing to the great advance in price of seed.

Reduced to oil, total average value, say 95c, equals $590,248 30.

The reports of the large crop of western seed had the tendency to keep prices down a considerable portion of the year, notwithstanding the deficiency in imports. But the large crop did not make up the wantage as shown above, consequently prices rapidly advanced during mid-summer, and closed the year with increased firmness. The crop of seed at the west is reported to be excellent in quality and quantity.

The imports at Cincinnati for 1862 amount to about 50,910 bushels. This is some 924 bushels less than in 1861, and 1861 was 192,000 bushels deficient. This makes 192,924 bushels, total.

There were some 24,000 bushels less seed sown in the spring of '61 than '60. Total consumption 50,559 bushels, being 5,016 bushels less that in 1861.

Amount on hand, equal to 6,351 bushels.

Average price of seed, $1 20.

Average price of oil, 77c.

Value of the consumption, $60,670 80.

If reduced to oil, total value of consumption $77,860 86.

Although 1862 is some 5,016 bushels short of 1861, equal to some 10,032 gallons oil, yet 1861 falls short of 1862, in point of value, some $27,728 86.

From our best information, the amount of seed sown within the vicinity of Dayton, O., in 1862, was some 24,500 bushels. The yield, or crop, for the year, some 185,000 bushels, and on hand Jan. 1, '62, some 70,000 bushels. Amount of oil, some 206,000 gallons.

From the above statement we can approximate nearly to the facts, and the position of the Linseed and oil would be as follows:

	Bus.
On hand Jan. 1, 1862, Atlantic States, say	27,333
Imported in 1862 " "	294,857
Imported in 1862, Cincinnati	56,910
Imported (or crop) Dayton	185,000
	564,100

	Bus.	
Consumed in 1862, Atlantic St'ts.	310,657	
" " Cincinnati	50,559	
" " Dayton	115,000	476,216

Amount on hand Jan. 1, 1863, Atlantic St's.		11,533
" " " Cincinnati		6,351
" " " Dayton		70,000
As above		87,884

TOTAL VALUE OF IMPORTS.

Atlantic States	$678,171 10
Cincinnati	58,292 00
Dayton (crop)	222,000 00
	$957,463 10

TOTAL VALUE OF CONSUMPTION.

Atlantic States	$714,511 10
Cincinnati	60,670 80
Dayton, (seed same value as Cin.)	138,000 00
	$813,181 90

TOTAL VALUE OF SEED ON HAND.

Atlantic States	$52,660 00	
Cincinnati	7,621 20	
Dayton	84,000 00	$144,281 20
Same as above		$957,463 10

Reduced to oil, and we have—

TOTAL VALUE OF CONSUMPTION.

Atlantic States	$590,248 55
Cincinnati	77,860 86
Dayton	177,100 00
	$845,209 41

The great demand and uses for which flax is so well adapted in taking the place of cotton, is receiving attention from every section of this country and Europe. It is only recently that the flax waste, or fibre, has been successfully worked. Price of flax has rapidly advanced, and the current high rates will stimulate planting. The yield of seed is from 6½ to 8 bushels per acre. Tangled straw about 1,000 lbs. The average price of straw about $4 per ton. But little pulled straw is brought to market—perhaps one-tenth of the whole. The fact is, the low price of the straw has offered little or no inducement to save it heretofore, but things have changed, and the great demand for flax—even the waste from the dresser being worth some $12 to $14 per ton—and the great advance in the price of oil, will induce the farmers to plant largely, and there is no doubt but that the prices will be remunerative.

Statistics show that in 1860 there were 152,040 pounds flax; 1861, 1,598,352 lbs; in 1862, as far as heard from, some 3,783,079 lbs; and this year it be three-fold over 1862.

The Linseed oil trade in this city was about equal to '61; if anything a few thousand gallons more. As prices advanced the demand fell off, until the luxury of being clean was a matter of absolute necessity. Although prices will rule high at the commencement of the year, we anticipate a fair demand.

WHALE FISHERIES.

The whalin gfisheries of 1862 can be set down as successful, although in numbers less, and less tonnage. A better class of vessels has been employed, and better fitted for the business.

The great advance in price of oil and bone, which have continued through the season, and the cheering prospects from the Northern grounds, give every encouragement for a prosperous year in 1863. The winter was mild and whales abundant. In 1862 there were some 33,281 tons less tonnage than in '61, while the importations were 46,530 barrels less, and 1861 was less than '60 by 18,096 tonnage, and 11,066 barrels of oil.

The last reports from Honolulu are exceedingly favorable. The general average of Arctic and Oshootsk whalers is some 926 barrels, and 12,380 lbs bone, which shows an average increase over 1861 of between 200 and 300 barrels. The catch of 1862 is some 45,530 bbls less than 1861, and '61 was deficient some 11,064 bbls. Deficit of 1861 and '62, 57,594 bbls. In 1861 there were 514 vessels employed in the American fishery, with a tonnage of 168,476 tons.

In 1862 there were 423 vessels employed, with a tonnage of 125,465. This shows a deficiency of 91 vessels, and 33,011 tonnage. 1862 came in with a tonnage of 103,888, or 21,577 tons less than '62 and 68 vessels less than 1862.

The exports of oil in 1862 were 96,559 bbls., being 9,043 bbls more than in '61.

The exports of 1861 exceeded 1860 by 41,717 bbls.

The excess of the exports of 1861 and '62 is equal to 26,223 bbls.

	bbls.
Stock on hand, Jan. 1, 1262, equal to	74,510
Imported in 1862	156,119
	230,629

	bbls.	
Exported in 1862	96,560	
Stock on hand, Jan. 1, 1863	39,057	135,617
Consumed		95,012

The foreign demand at the first of the year was not as large as anticipated, owing in a great degree to the stoppage of the English manufactories for the want of cotton.

The firmness which marked the close of the year '61 continued till May, when there was a temporary decline. The remainder of the year prices advanced with increased firmness, stimulated by the high rates of exchange.

The average price of sperm oil, $1 42½, which was higher than for the last six years, and whale, 59½c, for the last five years.

The importation of Sperm oil for the year was 55,641 bbls, and whale 100,478, being 45,530 bbls. less than in 1861. The receipts of whale oil were good from March to October—the greatestamounts being in May, June and July. Of Sperm the receipts were good from April to November, the largest amounts being in May and August.

The largest amount of whalebone was in April and May.

The average price of Sperm oil for the year, $1

42½, against $1 31½ in 1861, and $1 41½ in 1860—the lowest price being in May and June, and the highest in November and December.

The average of whale for the year was 59⅓c, against 44⅓c in '61, and 49c in '60c. The lowest being in May and June, and the highest in October, November and December.

Average price of Northern bone, 88c, Southern, 76c.

The stock of oil in the United States Jan. 1, 1863, 39,057 bbls.—consisting of Sperm 16,038 bbls, and whale 23,019 bbls, as against Jan. 1, 1862, Sperm 16,132 bbls., and 58,378 bbls. whale.

The value of the importation of oil for 1862, taking the average price of crude, sperm and whale—importation of sperm 55,641 bbls., equal to 1,752,691 gallons, at the average price for 1862, amounts to $2,497,584 67—being $359,065 60 less than 1861.

Average importations of whale 100,478 bbls., equal to 3,171,057 gallons, at the average price for '62 amounts to $1,884,450 49—or $20,602 44 more than in 1861.

Importation of whalebone 763,500 bbls.; average price for the year say 82c, which is full low, equals $626,070—some $340,693 over 1861. Total average for the year 1862 is $5,008,105 16, exceeding 1861 by $2,229 84. Although our imports for '62 were 45,520 bbls less than in 1861, the value of the fishery exceeds the previous year, as shown.

Difference of average value 1860 and 1861 is $1,545,297 52—between 1861 and 1862 is $2,229 84. Difference of average of both, $1,543,067 74. Comparative value of the Fishery, tonnage, and number of vessels, for the last four years:

Y'r.	Vessels.	Tonnage.	Value.
1859	624	195,115	$8,504,483 73
1860	569	176,842	6,551,172 84
1861	514	158,746	5,005,875 32
1862	423	125,465	5,008,105 10

FOREIGN OIL MARKET.

The demand for sperm oil for consumption was light, owing to the stopping of manufactories. Prices ranged from January to November, from £88 to £90 per ton.

Stock on hand equal to 2,010 tons. This is some 1,356 tons more than January 1, 1862.

Imported, 4,548 tons; consumed, 3,192 tons; being 399 tons less than 1861.

The importation of whale oil was large as compared with previous years, prices ranging from £36 to £43 per ton. Amount on hand January 1, 1863, equal to 306 tons. The imports of whalebone was only 142 tons, including the Davis' Straits fishery. Amount on hand January 1, '62, 40 tons.

Fish oils, cod and seal, have ruled high during the year.

Cocoanut oil has ruled high, but lower prices are anticipated on arrival of shipments from the East Indies. From last reports from the Pacific Islands, everything is prosperous, and prices, from the abundance, will rule low in 1863.

Stock of petroleum at both Liverpool and London is large, equal in crude and refined to 28,023 bbls., and 2,466 cases and 1,200 cases spirits.

From "Macrae, of Liverpool," we learn that some nine millions of gallons were imported into Europe in 1861 and '62. Canada and America, at the value a million sterling, in 1862, while in 1860 it was almost unknown.

The great obstacle to petroleum in Europe is parafine oil, but it does not compare in point of beauty, color or smell, to the American refined oil, although the same quantity of parafine oil will burn the longest.

The offensive order of Canada oil has checked its progress in Europe. One great difficulty in perfectly deodorizing Canada oil, is that the chemicals destroy its burning properties. Exchange will have an important bearing on the movement of petroleum to Europe.

PETROLEUM.

From the history of the past and present, the failure of the flow of oil in this country, is only a matter of time. The recent failure of the oil wells, at Oil Creek, at Enniskillen and other places, together with the ill success attending new developments, show that deposits in these sections are nearly dry.

The petroleum business of Buffalo did not escape the wild excitement which has marked this branch of trade throughout the country, during the year past. The first quarter of the year prices for refined ranged from 30 to 25c; and during the middle of the year remained quiet at 25c. The remaining quarter was marked by wild speculation. Everybody was going to make his fortune in little or no time, (some of which escaped through leaky barrels.) Everybody was buying to sell to "somebody" else, and prices advanced from 30c to 60c and in some cases 90c and $1.

The high rate of exchange increased the speculation. Money tried to rule, but it was no use: oil was not worth the extravagant price, and down it came with ruin to thousands. Many brought largely of Crude, at high rates, in anticipation of a continued demand at speculative prices, and it was soon evident that they were paying "dear for the whistle."

Like all business of an unnatural growth, a few make the money, while the mass are the losers. Take for instance the success of the wells, and allow that there are fifty wells today, yielding oil—or good yielding wells—at Oil Creek; take the number of wells that have been commenced—say 800 or 1000—at a cost of $1000 each, and we have an average cost of these fifty at $20,000 each, a total expenditure of a million or over of dollars. In Buffalo there have been some five or six refineries in successful operation during the year, with a total average capacity of 12,000 to 15,000 gallons per week. The oil made at this point stands well at home and abroad, as to quality and shipping order.

The export from the United States for the year has been large, some 10,950,991 gallons. Allowing this to be one-fifth of the amount of the annual product for 1862, and it amounts to 54,755,055 gallons equal to a yield of 150,014 gallons as the average amount per day. This 54,755,055 is based on the amount of exports, which include Crude and Refined, and as no exact figures can be had, we approximate, as near as we can, making all allowance.

Allowing our exports to be 10,950,991 gallons for the year 1862, including Crude and Refined, and one-third of this to be Crude, and we have 7,300,661 gallons Refined and 3,650,330 gallons Crude.

Allowing the yield to be 60 per cent, leaving 40 per cent to be added to the amount of the Refined, and we have 10,220,925 gallons Crude, to which add the Crude 3,650,330 gallons, and we have the exports reduced to Crude oil, or equal to 13,871,255 gallons, or 10,950,991 gallons, including Refined and Crude.

If we take this as a basis, and allow that it is only one-fifth of the product of the United States, we have 69,356,275 gallons yield or product for the year. Our exports from this and allow that we have 1,000,000 bbls on hand, and we have 51,485,050 gallons Crude on hand. Allow 60 per cent for Refined, and we have left for consumption 30,891,030 gallons for the year.

To prove this, as near as we can, without exact figures, a number of gallons of Crude and Refined, take 54,755,055 gallons, which includes Crude and Refined, being five times the amount of exports and allowing the exports to be of Crude one-third and Refined two-thirds, and to arrive at the value of this product, take the average price of Crude, 18c, and Refined 33c, in New York for the past season and we have the following figures:

7,300,661 gallons Refined at 18c amounts to	$2,409,218 13
3,650,330 gallons Crude at 18c amounts to	657,059 40
10,950,891 gallons valne	$3,066,277 53

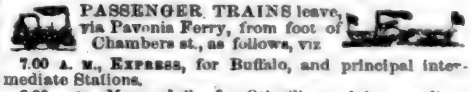
Take the value of exports at New York as reported at $2,037,413, this leaves 4,167,425 gallons from other parts to be accounted for. Allow one third to be Crude and two-thirds Refined and we have it as follows:

Value of exports from New York		$2,037,483 00
2,778,284 gallons Refined at 33c	$916,833 72	
1,389,141 gallons Crude at 18c	111,131 28	1,927,975 00
		$3,065,388 00

A variation of only $899 53 in the total amount, so that we think we are safe in saying that the total value of the exports for 1862 are $3,066,277 53.

Amount left on hand for consumption, if in Crude, 55,485,020 gallons at 18c, $10,052,108 60. Same amount if reduced to Refined, equals 33,291,012 gallons, average at 33c, equals $10,786,033 96.

Allowing these to be near the facts and the whole production for the year 1862, stands as follows:



7,300,661 gal. Refined 8,650,330 gal. Crude	Exp't value	$3,066,277 53
22,993,009 gallons Refined on hand 18,495,006 gallons Crude on hand		10,917,124 05
52,440,006		$13,983,401 58
13,996,005 the 40 per cent to reduce the Crude on hand to Refined,		
2,920,264 the 40 per cent to reduce one-third the exports to Refined,		

69,356,275 gallons, as before stated, as the product of the United States for the year.

HALLET & CORNWELL,
No. 24 PINE STREET,
Note & Exchange Brokers,
STOCKS, BONDS AND GOVERNMENT SECURITIES
BOUGHT AND SOLD ON COMMISSION.
JACOB G. HALLET, (late with Blake Bros. & Co.)

QUARTZ MILLS

OF THE MOST APPROVED KIND,

MANUFACTURED BY **BURDON, HUBBARD & CO.**, 102 Front st., Brooklyn, N. Y. Also Agents and manufacturers of the BEST PATENT PREMIUM AMALGAMATORS, the best and simplest in use for saving both **fine** and **coarse** gold.

RENSSELAER POLYTECHNIC INSTITUTE,
TROY, N. Y.

THIS Institution is now in full operation, and offers superior advantages for the thorough study of the NATURAL SCIENCES, and CIVIL, MECHANICAL and TOPOGRAPHICAL ENGINEERING. Graduates of the Institute obtain without difficulty very desirable positions as Civil, Military, and Naval Engineers. The next Semi-annual Session will commence FEBRUARY 18TH, when Students will be admitted to advanced standing in the two lower Classes.

Further information, with the ANNUAL REGISTER, may be obtained from

2m3 Prof. CHARLES DROWNE, Director.

OTTO AHLSTROM,
MANUFACTURER OF THE
LOUDON & AHLSTROM'S
PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & Co., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT RE-OILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.

Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past ten years, with uniform success, they confidently offer their services to those requiring such aid.

STOCKS AND BONDS
BOUGHT AND SOLD ON COMMISSION.

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES," because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000, and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued by the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

FISK & HATCH,
BANKERS,
AND DEALERS IN
ALL ISSUES OF GOVERNMENT
AND OTHER
FIRST CLASS SECURITIES,
38 Wall st., N. Y.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK,

HAVE on hand for immediate delivery, the **NEW TWENTY-YEAR SIX PER CENT. BONDS** of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in sums of

$50, $100, $500 and $1,000.

The Registered Bonds in sums of

$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house, it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, 25 cents, Brass, 31 cents, Silver-Plated, 50 cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of $1.25.

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

French Railway Humanities.

Official power in France has from time immemorial assumed the shape of beneficent intentions towards the people themselves. Henry 4th gained the love of his subjects by the memorable saying that the great wish of his heart was, that every Frenchman might have a fowl in his pot on Sundays, and the popularity of Louis Napoleon, and the stability of his throne depend very much upon the success of his attempts to impress his subjects with the conviction that he lives and reigns only for their happiness and glory. We have all noticed that to the *ouvriers*, the workingmen, who now and then appear in blouses, with muskets in their hands, and behind and on the tops of ugly looking barricades, he has been particularly complaisant. To give them employment new streets have been opened, new boulevards created, and a new architecture developed in the good city of Paris, while during the intervals of his great public works, he has amused them with pageants of the most brilliant description, celebrations, dedications of fountains, grand reviews and an incessant rataplan. In the same spirit the legislation and action of the Imperial Government are directed beyond the metropolis to the various departments and with like objects. A vast system of internal improvement is going on throughout France, on its rivers to improve their navigation, on its mountains to restore their forests, on the plains to increase their fertility; country roads are projected to feed the railways, fairs are established in the departments to promote intelligent industry, to improve the breeds of cattle, and the fabrics of industry, and develope mines and improve manufactures. To this end, the Government makes large advances of money to associations, communes and cities, on the condition that these contribute their proper proportion.

This policy is adopted to a great extent upon the French railways. Some of the companies, and these are said to make the largest dividends, actually grant a part of their yearly earnings to their employees and to no inconsiderable extent; securing thereby the personal interest of every one of these people in the economical and faithful management of the lines.

The Orleans railway is a striking illustration of the policy which distinguishes the French Government, and it exercises over the large numbers of persons it employs in its service, a sort of paternal care which is quite singular both in its character and consequences. To M. Polonceau the chief engineer of the company, is due the credit of the arrangement. He devised not long since, a plan by which the food, the clothes, and the health of every person employed on his line should be systematically cared for, and at the least possible cost. We know in this country the incessant labors of the people employed upon our railways, allow them but little time to look after their families, their comforts and their health.

Engineers, conductors and firemen, for example seldom pass more than a few hours in a week at home. They are continually on the wing, and even among the workmen at the engine houses and machine shops there is an incessant "sound of hammers closing rivets up." It would seem impossible for these persons to have much leisure or repose, and though the compensation of a large salary sweetens the heaviest labor, it does not free the possessor from many anxious cares.

On the Orleans railway then, we find at the principal stations, a medical man with well prepared offices, whose business it is, not only to give his immediate services in case of accidents, but his advice and attention to all those employees and their families who are merely unwell. Medicines are administered gratis, their families are promptly visited, and every possible attention is paid to the sick. Workmen injured in the service of the company receive full pay until their restoration to health, and the ordinary sick are allowed forty cents per day. So liberal is this arrangement, that in a single year, 1858, 2,500 persons were under the care of the medical staff, of whom 1,900 were not workmen but members of their families, and the cost of the medicines used was three thousand dollars.

In connection with this, another step was taken. Committees composed of the superior officers of the Company were formed for the purpose of visiting the homes of the workmen, and money and goods were bestowed on their families as deemed advisable.

In the winter of 1857–'58, 1,243 families were visited and relieved by the committees to the extent of $10,000, and the moral effect of this supervising benevolence is seen and felt in its influence on the railway employees themselves.

At each station is a clothing and food depot, where these articles are sold to the workmen and their families at the cost price, or nearly so. By this escape from the profits of middle men and hucksters, the men save nearly 75 per cent. on articles of prime necessity, and of course live much more cheaply than working men of other classes. Each employee is allowed a monthly credit at these depots in proportion to the amount of his wages, and the accounts are accurately kept. These depots are constantly supplied with the best articles. In 1857, the latest year of which we have an account, two hundred thousand dollars was the cost of food so supplied, and forty-five thousand

dollars that of clothing. No one is compelled to use these credits or buy unless he chooses. At Ivry, the Paris station, there is a refectory for the use of the railway people, open from morning till night, where an excellent meal is provided including bread and wine at a cost of ten cents. For two cents, one may have 3 oz. of bread and 15 oz. of soup, both of an excellent quality. A dinner consisting of soup, two dishes of meat, a dish of vegetables and a half a pint of wine can be had for 11 cents.

This last arrangement of providing the workmen with cheap and nourishing food, is said to have entirely changed the habits of the Orleans railway servants. They have forsaken their former pot-house way of life, and their families have gained largely by the change.

In this country it is very doubtful whether it would be possible to carry out the benevolence on the Orleans plan, owing to the great difference in the tempers and opinions of our working people. Each man in this country is deemed competent to take care of himself; he generally prefers to do so and even benevolence if obtrusive, is rejected by very large classes even of those who are in need.

The nearest approach to the French system, we can call to mind among ourselves, is the establishment of a refectory at the milk depot of the Harlem Railroad. There in warm and comfortable rooms, a good meal may be obtained at cost by those hard working men, who in the early morning await there the arrival of the milk trains, and who amidst snow and storm and often darkness, dispense throughout our large city the inestimable blessings of a pure, fresh, and wholesome beverage.

St. Louis and Iron Mountain Railroad.

The earnings of this road for the years ending October 1, 1861 and 1862, have been as follows:

	1861.	1862.
From passengers	$81,461 71	$99,837 46
" freight	120,219 25	141,168 37
" mails, rents, etc.	11,264 73	12,229 10
	$212,945 69	$253,234 93
Expenses, viz:		
Repairs of road	$27,558 47	$19,239 02
" bridges	12,733 39	9,617 84
" engines	12,676 62	20,290 86
" cars	13,956 29	17,608 55
" mach'y, etc.	2,470 51	3,445 28
" build'gs, etc.	916 95	3,704 59
General superintendence	9,376 81	8,154 80
Agents and clerks	6,986 41	8,881 97
Pay of train hands	25,567 06	25,590 20
Fuel for engines	12,660 00	16,114 22
Oil, waste, etc.	3,097 20	2,830 63
Loss and damage	2,081 87	3,243 11
Rent and taxes	6,174 88	7,901 37
All other expenses	9,665 65	11,353 83
	$145,922 11	$187,976 27
Net earnings	$67,023 58	$65,258 66

The gross earnings show an increase in 1862 over 1861 of $40,289 24, with an increase in expenses of $42,054 16—making the decrease in net earnings $1,764 92. The report says:

A considerable amount of our business has been made up of the transportation of Government troops and freight. The rates allowed by the authorities is much lower than our tariff rates. The allowance for passage of troops has, by custom, become the price for carrying soldiers traveling on their own account; and for transporting soldiers that are stationed on the road for guarding bridges, we get nothing. Consequently our performance of labor and service has been much larger than is represented by our earnings, while our expenses have been proportionably higher.

Our outstanding liabilities were represented in our last Annual Report		$27,887 88
Amount since charged up for interest on county bonds to 31st December, 1861, as paid by County		132,810 76
Add sundry other items since to construction account		10,768 04
Total		$170,966 68
Assets reported on hand last year	$180,988 46	
Add net earnings this year	65,258 66	
Total	$246,247 12	
Paid County, etc., from these assets	113,606 63	113,606 63
Assets on hand Oct. 1. 1862	$132,640 49	
Liabilities outstanding October 1, 1862	$57,360 05	

These assets are available, and will enable the Company to pay off its present liabilities, and also reimburse the County of St. Louis for amounts yet to be charged up against the Company for interest on the bonds issued to the Company.

The road and bridges are in good and safe condition generally—we may say very good, considering their age, natural wear and decay, and the difficulty, from the disturbed state of the country, in keeping an organized and efficient force on their repairs. Labor has been high, scarce and less effective than in ordinary times. We have replaced over fifty thousand cross ties, renewed over one hundred tons of rails purchased, and have rebuilt Big river bridge. Our expenses in repairs and reconstruction of road and bridges this year exceed those of last year $18,697 29.

The Iron bridge over Joachim creek continues to work satisfactorily. It is 140 feet span, and has been subjected to a test weight of one hundred and forty tons of pig iron. Under the pressure of this weight its deflection was one and one eighth inch; on its removal the bridge recovered its original position. The satisfactory result of this test has fully justified our highest expectations; and we are of opinion that the comparatively low cost of this bridge, and the simplicity of its design—combining as it does the requisite strength and rigidity without extraneous weight—cannot fail to recommend it to the favor of the public as a railroad or highway bridge. It was patented and constructed by J. L. Jones, Esq., of St. Louis.

We have on the road three comparatively new wooden bridges; the remainder of our wooden bridges (22 in number) are rapidly decaying, and must soon be rebuilt; they now require constant and careful watching to keep them safe. Trains have been twice delayed at the Meramec bridge—once in consequence of the bottom chord having been burned by incendiaries, and once in consequence of the failure of timber from decay. It has, however been made secure for the present by iron rods taking the strain from the timbers; but a removal of a part, at least, of the structure will soon be necessary.

The work on the trestle work between Lesperance and Miller streets progresses gradually. The city authorities have been more punctual in providing the labor for loading and unloading dirt, than we have been able to haul it away at times, from the press of other business.

No change has taken place in the amount or character of the rolling stock of the Company since the last annual report, except that considerable more thorough work has been done in overhauling and repairs of both locomotives and cars than was done last year; consequently our expenses on this account have exceeded those of last year $12,108 83.

For ordinary times our rolling stock is ample for the business of the road; but during the past year we have many times been overrun with Government transportation, and labored to considerable disadvantage to ourselves, as well as to the public.

In view of the ordinarily small net earnings of the road, which are likely to be dimished by reason of the probable increase in the price of all kinds of labor and materials employed in repairs and construction, your Board are of opinion that it will be necessary to increase generally the rates on freight and passenger fares, to provide the means of renewing old ties, old rails, and rebuilding our decayed bridges as fast as the safety of the road demands. Our tariff rates have always been comparatively low, and while roads running East are increasing their rates, notwithstanding their greatly increased business, for the sake of swelling their dividends, will not this Company be justified in establishing such rates of freights and fare as may be needed, merely to keep the road in good condition for safety and efficiency?

The following statement compiled from the balance sheet given in the report, and the various tables appended thereto, will show the position of the company's affairs at the close of their last fiscal year, October 1, 1862:

Capital stock subscribed $2,037,600, of which there has been paid		$1,971,127 50
State of Missouri bonds		3,501,000 00
Net earnings to October 1, 1861		213,555 04
Gross earnings for 12 months ending October 1, 1862		253,234 93
Floating debt, October 1, 1862		57,360 05
		$5,996,277 52
Graduation, masonry, bridges, and superstructure, including iron, etc.		$3,350,749 70
Station buildings, engine houses, machine shops, machinery, etc		181,321 34
Land damages and real estate		153,383 68
Contingencies and legal services		63,876 22
Engineering		157,215 57
Potosi Branch Railroad		67,969 35
Rolling stock		344,167 63
Discount and interest		1,356,977 27
Transportation expenses one year to October 1, 1862		187,976 27
Assets, viz:		
Am. Iron Mount Co.	$20,665 61	
Bills receivable	17,810 67	
Supplies for machine shop	11,075 86	
Fuel account on hand	2,144 62	
U. S. Government	20,603 02	
Josiah Macy & Sons, N. Y.	35,853 21	
Sundry accounts	11,961 49	
Cash on hand	12,524 00	
		132,640 49
		$5,996,277 52

The rolling stock belonging to the road consists of 16 locomotives; 7 first class, and 3 second class, passenger cars, 3 baggage, 17 box, 8 cattle, 154 platform, 30 gravel and 13 hand cars, and 1 steam car.

The total number of miles run by locomotives with all trains was 232,631. Number of through passengers carried 5,856; way passengers, 239,841 United States troops, 22,046—total 261,887. Total carried one mile, 3,977,478. The total number of tons moved was 65,011. Total tons carried one mile, 3,975,395.

The officers and directors for the year 1862-'63 are:

Directors.—Stephen D. Barlow, Carlos S. Greely, Jules Valle, G. W. Dreyer, George Partridge, Ferdinand Gottschalk, Isidor Bush, Benjamin Farrar, Bernard Pœpping, Frederick Hill, Charles S. Rankin, John Evans, James Lindsay.

Pres't and Sup't.—Stephen D. Barlow.

Vice President.—Carlos S. Greely.

Secretary and Treasurer.—S. B. Clark.

Auditor.—M. A. Douthett.

Montreal and Lake Champlain Railroad.

The annual meeting of this company was held in Montreal, on the 12th ult., at which the following gentlemen were elected directors for the ensuing year:—C. J. Brydges, Wm. Molson, W. Dow, John Ostell, Hon. J. Ferrier, W. E. Phillips, E. M. Hopkins, E. H. King and J. Thompson.

The report of the directors was submitted, from which we learn that thr receipts for the year ending December 31, 1862, were: from Passengers, $ 100,038 30; Freight $108,937 99; Ferry Passengers $1,492 20; Ferry Freight $1,173 38; Rouse's Point Agency $2,290 92; Rents $18,137 12; Storage $279 76; Wood $2,558 45; Caughnawaga Ferry $6,339 30; Car Hire $1,550 53—making a total of $242,797 95. The expenses amounted to $124,955 48, including $3,000 voted and paid to the President, and there was a balance of $117,842 47 remaining. Out of this balance, interest on Bonds, &c., to the amount of $91,388, had been paid, and $3,923 80 set apart for interest accrued and not called for—leaving a balance of $22,530 67 on hand.

The receipts and expenditures for the last three years have been as follows:—

	Receipts.	Expenses.	Net.
1860...	$229,820 01	$136,349 62	$93,470 39
1861...	213,706 63	123,247 26	90,459 37
1862...	242,797 95	124,955 48	117,842 47

The receipts of the last year have thus exceeded those of either of the two preceding, which, under all circumstances, must be considered as a satisfactory result. The financial condition of the company is exhibited in the annexed Balance Sheet:

Consolidated Stock 6,132, 26–40 Shares of $200 each	$1,226,530 00
Preferred Stock 2,023 Shares of $200 each	404,600 00
First Mortgage Bonds	577,186 66
Interim Debenture Certificates	254,242 32
Second Mortgage Bonds (not yet exchanged)	44,000 00
Lachine Mortgage Bonds	2,200 01
Bonds No. 1 (non-mortgage, not yet exchanged)	8,600 00
Bonds No. 2 (non-mortgage, not yet exchanged)	23,800 00
Bills payable	22,984 62
Sundry debts due by the Company	30,029 79
Profit and Loss	69,202 31
	$2,663,375 71
Cash	$7,684 87
Bills receivable	44,532 07
Railroad property including wharves, Stations, &c	2,400,866 95
Steamers	63,121 75
Vermont and Boston Telegraph Stock	1,500 00
Stanstead, Shefford and Chambly Railroad Bonds	2,433 33
Industry Village and St. Lawrence Railroad Stock	11,377 33
Fuel, wood and material on hand	39,532 82
Accounts due the Company	92,326 58
	$2,663,375 71

It will be seen that the conversion of the Bonds of the Company has been steadily progressing under the authority obtained during the last Session of Parliament, and there is every reason to believe that before the next Annual Report, the whole will be exchanged.

The Debenture Capital of the Company will then consist of one series of Bonds forming the First Mortgage on the entire property, amounting to a sum of £181,468 sterling, or $883,144, bearing interest at six per cent per annum, which will require £10,888 sterling, or $52,988 00.

In addition to this item, which will be the first charge upon the Company's revenue, there have been issued, under the Act of last Session, Preferred Shares amounting to the sum of $404,600 00, bearing interest at the rate of ten per cent per annum, involving an annual charge of $40,460 00.

This will make the total of preference charges $93,448 00. When these arrangements are finally completed, the floating debt of the Company will be entirely cleared off.

Within the last two years, the Bridges on the line have been thoroughly repaired, and are now all reported to be in a satisfactory condition.

The Rails on some portion of the line having been down for nearly a period of ten years, the cost of renewals will unnecessarily be somewhat greater for the next few years than it has been.

The Directors have also had their attention called to the Rolling Stock, and to the necessity both of maintaining it in a state of efficiency, and of keeping pace with the requirements of the travelling public. They have, accordingly purchased two new Passenger Cars, which will be brought into use in the coming Spring.

These Cars were procured upon reasonable terms, and their cost will be defrayed by annual charges against the revenue for the next three years.

The old Cars, which have for a long time been in use, will be thoroughly overhauled and repaired in the Company's own shops.

It will be necessary in like manner to make considerable repairs to the Locomotive Stock, and perhaps to purchase a new Engine, the cost of the latter to be defrayed in the same way as proposed with regard to the new Passenger Cars.

The Directors report that the Traffic during the month of January, 1863, exhibits a considerable increase over the corresponding month of 1862.

The Stanstead, Shefford and Chambly Railroad, from St. Johns to Waterloo, has been in operation during the whole of last year, and traffic has been freely interchanged with it.

Under a charter obtained two years ago, a Company has been organized to construct a proposed line of Railway, leaving the Stanstead Line some distance East of St. Johns, and running to the Province Line to the East of Missisquoi Bay, where it is proposed to form a junction with a Branch of the Vermont Central Railroad.

British Revenues in 1862.

Notwithstanding the interruption of the cotton trade by the present rebellion, the English statesmen are astonished to find out their general trade has not fallen off, but the contrary, and the revenue is largely increased during the past year.

The following is an abstract of the gross produce of the revenue of the United Kingdom in the undermentioned periods, ended December 31, 1862, compared with the corresponding periods of the preceding year:

	1862. £	1861. £	Increase. £
Customs	24,036,000	23,774,000	262,000
Excise	17,234,000	18,161,000	*627,000
Stamps	8,913,945	8,488,170	425,775
Taxes	3,148,000	3,119,000	29,000
Property tax	11,104,000	9,962,000	1,142,000
Post office	3,609,000	3,500,000	100,000
Crown lands	298,521	293,479	5,042
Miscellaneous	2,361,963	1,306,202	1,055,761
Total income	70,996,429	68,603,851	2,392,578

QUARTER ENDED DECEMBER 31.

	1862. £	1861. £	Increase. £
Customs	6,320,000	6,147,000	173,000
Excise	4,000,000	3,896,000	104,000
Stamps	2,187,000	2,098,000	89,000
Taxes	1,270,000	1,282,000	*12,000
Property tax	2,931,000	2,359,000	572,000
Post office	950,000	910,000	40,000
Crown lands	86,000	84,000	2,000

Totals	18,378,928	17,068,030	1,310,889

An Important Patent Suit.--Coal-Oil Lamps.

Irvin A. Williams *versus* Jonathan Mayhew and others doing business as the "Buffalo Steam Gauge Company." This was an action brought against the defendants for the infringement of a patent granted to the plaintiff for an improved mode of constructing lamps for burning kerosene or coal-oil, "known as Williams's Coal-oil Burner." The invention claimed by the patentee consists of a peculiar combination of perforated metal cylinders or plates for supplying air to the interior and exterior of the flame, with circular hollow wick tube; and the evidence put in at the trial, on the part of the plaintiff, showed that the arrangement patented by him is essential to the beneficial operation of all lamps of the class in controversy in the suit. The defendants had violated the patent by making and selling large quantities of coal-oil lamps ("head lights") for locomotive engines.

A number of witnesses, called by the plaintiff's counsel, testified that they were well acquainted with the practical operation of the patented lamp; and that it gave a more brilliant and powerful light than any other locomotive lamp they had ever seen. They also stated that it was superior to gas and every thing else in use for "head lights," and that it enabled the engineers to see switches and objects along the track of a railroad at a much greater distance than any other locomotive lamp previously known.

The defendants contended that the invention was not new; and their counsel put in evidence a large number of prior patents and extracts and drawings from books; also several old lamps which were alleged to have been used before the plaintiff's invention. These the counsel and the "experts" for the defense claimed were the same as the invention which the plaintiff had patented, and would answer the same purpose. They also contended that the lamps which the defendants had manufactured were, in their construction and arrangement, substantially different from the invention described in the plaintiff's patent and were therefore no infringement of it. They further set up that one Samuel E. Cleveland, of Buffalo, was the first inventor of the very lamp in controversy, and that they had become the sole owners of the right to use it by assignment from him.

During the trial a number of questions arose of interest to all concerned in the manufacture, use, or sale of coal-oil lamps, relative to the nature and operation of such lamps, and also to the extent and character of inventions which preceded that of the plaintiff.

The cause came on to be tried in the Circuit Court of the United States for the Northern District of New York, before the Hon. N. K. Hall and a jury at Albany, on January 28, 1863. Many witnesses were examined on each side, and all the questions arising in the case were fully argued by the respective counsels.

The defendants, among other points relied upon by them, contended that the plaintiff's patent was limited to the employment of *two* perforated cylinders as one of the members of his combination; and that as they had employed but one, the patent could not reach over them. But the Court overruled them, and instructed the jury that, as matter of law, upon the language of the plaintiff's claim, his patent covered one, two or more of such cylinders, in combination with the other elements of his invention. They also contended that, as to the second claim of the patent, they had used less than the whole of the combination therein set forth, and that, therefore, the plaintiff could not recover under this claim. But the Court charged the jury that it was a question of fact for them to decide, whether the defendants'

lamps contained substantially the invention set forth in the plaintiff's second claim.

The jury brought in a verdict for the plaintiff upon all the issues, finding that the invention was novel and the patent valid; that the defendants' assignor (Cleveland) was not the first inventor of the lamp in question, but that the plaintiff *was*, and that the defendants had infringed both of the plaintiff's claims.

S. D. Cozzens and A. G. Williams, of New York, were counsel for plaintiff. E. B. Forbush, of Buffalo, and M. Smith for defendants.

Persons Riding in Charge of Live Stock.—Drovers' Free Pass.

OWNERS OF CATTLE ALLOWED TO RIDE FREE FOR THE PURPOSE OF TAKING CARE OF THEIR STOCK ARE NOT TO BE REGARDED AS GRATUITOUS PASSENGERS. COMPANIES HELD LIABLE TO SUCH TRAVELLERS FOR GROSS NEGLIGENCE.

In our last number we reported the case of Wells *vs* the New York Central Railroad Company, in which the New York Court of Appeals held that a contract between a railroad corporation and a *gratuitous* passenger by which the company is exempted from liability, under any circumstances of the negligence of its agents for any injury to the passenger is not against law or public policy and is valid. We now report the case of Smith *vs* the same company in which the court of Appeals hold that the owner of cattle travelling in charge of them, and paying no independent consideration for the conveyance of himself, under a contract that "the persons riding free to take charge of the stock do so at their own risk of personal injury" is not to regarded as a "gratuitous passenger." The drover in this case was injured by being compelled to ride in an unfit and dangerous car, and the court held the company liable, four of the judges going on the ground that the contract for exemption from liability was void, as against public policy, and the fifth, that the negligence, as it respected the machinery of transportation, is imputable to the carrier himself.

The action was under the statute of 1847, for damages from the negligent killing of the plaintiff's intestate, while a passenger on the defendant's railroad. On the trial, these facts appeared. The deceased made a written contract with the defendant for the transportation, from Buffalo to Albany, of two car-loads of hogs, for $67 per car. The contract recited that they were carried at a reduced rate, in consideration of the owner's assuming certain specified risks in respect to the safety of the hogs during the transit. It contained this clause; "It is further agreed that the said Ward is to load, tranship and unload said stock at his own risk; the said New York Central Railroad Company, furnishing the necessary laborers to assist. And it is further agreed that the persons riding free to take charge of the stock do so at their own risk of personal injury from whatever cause." Ward went upon the train in charge of his hogs. He paid no fare for his own conveyance otherwise than as a consideration for carrying may be found in the above contract. He was furnished with a drover ticket, passing him free over the road; the terms of which were not otherwise shown than by evidence of the printed form of such tickets then used by the corporation, viz: "Pass ———, in charge of cars of stock, on account of ———. Takes all the responsibility as to the injury of himself or stock.

At Rochester the car in which Ward and other drovers had ridden from Buffalo was taken from the train, and an old emigrant car, unsafe, by reason of having a flat wheel, was substituted; the attention of the conductor was called to its condition and unfitness. The train proceeded to Oriskany, where this car was thrown off the track, and Ward was killed.

At the trial the Judge charged the jury to find for the plaintiff, if the death of the intestate was caused by gross negligence upon the part of the defendant or its agents, without fault on his part. The plaintiff had a verdict, and judgment, and the defendant then appealed. The following is a portion of the opinion rended at the decision of the case by the court of Appeals.

WRIGHT J. The defendants claim that this was a contract releasing them from all liability for personal injury to Ward, except such injury arose from their willful misconduct. But it is unnecessary to add this qualification, as by its terms all risks are assumed from whatever cause, was such a contract a valid one? With regard to a special contract with a common carrier for the carriage of property, there are no considerations affecting the public interest of policy forbiding it being made. The parties to such a contract are alone interested; and although the carrier exercises a sort of public employment, the obligation which the law imposes on him inure exclusively to the benefit of the owner of the property. The owner may agree to relieve the carrier from his obligations as an insurer, and limit them as to the particular transaction to those of a private carrier for hire; and the interests of the public will be in no way affected thereby. But how is it when a railroad company is a carrier of persons, and engaged in the business of operating a railroad for the public use? Whether a contract shall be avoided on the ground of public policy does not depend upon the question whether it is beneficial or otherwise to the contracting parties. Their personal interests have nothing to do with it; but the interests of the public are alone to be considered. The state is interested not only in the welfare, but in the safety of its citizens. To promote these ends is a leading object of government. Parties are left to make whatever contracts they please, provided no legal or moral obligation is thereby violated, or any public interest impaired; but when the effect or tendency of the contract is to impair such interest, it is contrary to public policy and void. Contracts in restraint of trade are void, because they interfere with the welfare and convenience of the state; yet the state has a deeper interest in protecting the lives of its citizens. It has manifested this interest unmistakeably in respect to those who travel by railroad. Her policy, and the uniform policy of the law has been, in regard for the safety of the citizen who has recourse to this dangerous mode of travel, upon a road and by agencies over which he has no control, to hold the carriers to the exercise of the utmost foresight even as to possible dangers, and the utmost prudence in guarding against them. This policy is dictated both by a desire to protect the citizen, and because the public is interested in his safety. Whether a carrier to whose exclusive charge the safety of a passenger has been committed, by his own culpable negligence and misconduct, shall put in jeopardy the life of such passenger is a question affecting the public and not the party alone who is being carried. It is said that the passenger should be left to make whatever contract he pleases; but in my judgment, the public having an interest in his safety, he has no right, to absolve a railroad company to whom he commits his person, from the discharge of those duties which the law has enjoined upon it in regard for the safety of men. Can a contract therefore, which allows the carrier to omit all caution or vigilence, and is in effect a license to be culpably negligent to the extent of endangering the safety of the passenger, be sustained? I think not. Such a contract it seems to me, manifestly conflicts with the settled policy of the state in regard to railroad carriage. Its effect, if sustained, would obviously enable the carrier to avoid the duties which the law enjoins in regard to the safety of men, encourage negligence and fraud, and take away the motive of self interest on the part of such carrier which is perhaps the only one adequate to secure the highest degree of caution and vigilance. A contract with these tendencies is, I think, contrary to public policy, even when no fare is paid.

In this case, however, Ward was not a gratuitous passenger. He had compensated the carriers not only for the transportation of his stock, but for the carriage of himself to take charge of it. He is to be regarded in the same light as a passenger who has paid a compensation for being carried Whatever may be said, therefore, in respect to a person ridirg free in pursuance of an agreement to assume all risks, the direct question here is whether it is against the policy of our laws for a railroad company carrying a passenger for a compensation to contract with such passenger for exemption from liability for its negligence, that it is I cannot entertain a doubt. If then the agreement in this case is to be construed as releasing the defendant from all liability for personal injury to Ward from their own culpable negligence and misconduct, and absolving them from all responsibility for his safe carriage, it is void.

But was that the tenor and effect of the agreement? The contract in which the stipulation is found related to the transportation of his hogs, and that contract provided that the owner should assume certain risks in respect thereto, and either accompany the train himself to take care of them, or furnish other persons to discharge that duty. * * * In it is embodied the stipulation that persons accompanying the train to take charge of the stock do so at their own risk of personal injury from whatever causes. It was a convenience to both parties, and a part of the contract that a person should ride along to take care of the stock. Now we are asked to presume whilst the agreement bound the carriers to safely transport the property, and the law held them responsible as insurers except so far as they had succeeded by agreement to limit such liability, that the parties intended that the persons in charge of the property should assume all risks of personal injury, whether resulting from the culpable negligence and misconduct of the carriers or otherwise; and that it was intended that the carriers should be held for loss occurring from their negligence in the transportation of the property, but absolved from all liability for injuries caused by such negligence, however gross or culpable, to the person in charge of it. This could not have been the intention, nor will the law presume that it was so long as there were other risks to which the stipulation might naturally

and properly apply, and more consistent with honesty and fair dealing. It will not be presumed that Ward intended to hold the carriers for loss occasioned by their omission of care in the transportation of his property, but to excuse them from any liability for injury to himself whilst taking care of it, though having no control or management whatever of the railroad; nor that the carriers, after having become a party to the contract for the carriage of live stock, a part of which contract was that a person should ride on the train to take care of such stock, intended that that person should take on himself the risk of personal injury, even though they should omit the ordinary precautions which a man observes in taking care of himself or his own property. The most reasonable construction to be given to the stipulation, in view of the circumstances under which it was made, and the only one I think the law will permit, is this; the persons riding on the train to take care of the stock will do so at their own risk of personal injury from causes not produced by the willful misconduct, gross negligence, or want of ordinary care of the carriers or their servants, in the control and management of the railroad on which themselves and the stock were to be carried. * * * On the whole, therefore, there was no error in holding, at the circuit, that notwithstanding the stipulation, the defendants were liable for gross negligence.

The judgment of the Supreme Court should be affirmed.

The Erie Railway.

The ultimate business of this magnificent thoroughfare is beyond mathematical estimate. It is evidently destined, with its branches and connections, to become the most important railway (the Pacific excepted,) on this continent. With important western terminations and branches, so much of the road as lies east of this point must necessarily do a vast amount of business, and every city and almost every village on its entire length will experience increasing growth corresponding in some degree with the business of this road. With this view of the anticipated growth of villages along the line of this great thoroughfare, may not the citizens of Hornellsville safely anticipate that the prosperity of our village will rank with the most prosperons villages on the line of the road.

Among the improvements going on in the vicinity of the railway depot here, we notice the erection of a new car house covering two railway tracks nearly 300 feet in length. There has also been a large addition to the engine house, and the platform at the northwest end of the passenger depot has been rebuilt and graded so as to avoid the necessity of steps as formerly. The latter is a decided public improvement.—*Hornellsville Trib.*

Atlantic and Great Western Railroad.

The work on this road is being pushed forward rapidly. Cars run tri-weekly from Ravenna eastward, the necessity of using the track in completing the road rendering more trains impracticable. The track is laid to Brady's Lake, and will be laid to Franklin Mills this week. The ties are distributed as far as Tallmadge Centre, and the track will be laid to that place without delay. The trestle work at the Old Forge is nearly framed and is now being raised. The ties to be laid from Tallmadge to Akron are all ready at Freedom, and iron is arriving every week, so that we may be assured there will be no delay in laying the track to Akron within a few weeks. It will require some little time to ballast the road and make it the substantial and perfectly appointed road which it should be, but the coming spring will give us a connection with New York, without change of cars.—*Ravenna Democrat.*

Product of the Lake Superior Iron Regions.

The following tables show the business of the railroad and furnaces from their first commencement to the close of 1862, and the shipments of ore each season, commencing with 1855. The figures of the Northern Iron Company's product not being accessible at present, we have estimated the amounts from the best data we could obtain, which are probably not far out of the way. Of the other, the products of each year may vary a few tons from the figures we have given, but the aggregate results are correct.

BUSINESS OF THE RALROAD

	Down the road.				Up the road
Year.	Pig Iron.	Ore, Tons.	No. of Passengers.	Passenger receipts.	Merch'dise. Tons.
1858	1,822	30,556	4,629	$1,540 62	1,806
1859	5,245	83,078	6,445	2,007 42	2,258
1860	2,119	150,903	5,487	1,989 92	2,124
1861	2,890	42,283	3,551	1,110 12	718
1862	1,610	140,453	5,168	2,033 95	1,283

The shipments of ore over the railroad are net tons, while on the lake they are gross. The average freight on ore is $1 per net ton.

SHIPMENTS OF IRON ORE.

Year.	Jackson Iron Co.	Cleveland Iron Co.	Lake Sup'r Iron Co.	Tot. gross tons.
1855		1,447		1,447
1856	4,497	7,100		11,597
1857	13,912	12,272		26,184
1858	11,104	19,931		31,035
1859	10,662	30,344	24,668	65,679
1860	41,286	42,696	33,016	116,998
1861	12,919	7,311	25,200	45,430
1862	42,767	35,244	37,710	115,721

Total amount shipped to date 414,091

PRODUCTS OF PIG IRON.

Year.	Pioneer. Iron Co.	Collins Iron Co.	Forest Iron Co.	North'n Iron Co.*	Value Per Ton.
1858	1,627				$25 00
1859	4,683	2,575			25 00
1860	3,560	1,950		150	25 00
1861	2,580	2,060	2,430	900	23 00
1862	1,438	2,207	2,802	2,143	35 00

*Estimated.

RECAPITULATION.

Date.	Tons Ore, gross.	Tons Pig, gross.	Total Value.
1855	1,447		$14,470
1856	11,597		92,776
1857	26,184		209,472
1858	31,035	1,627	249,269
1859	65,679	7,258	575,521
1860	116,998	5,660	736,490
1861	45,430	7,970	410,460
1862	115,721	8,590	994,976

We have also been furnished with some interesting information respecting the running of several of the furnaces, which shows that the business of iron making in this region is being rapidly brought to perfection, and that with it, the day of experiment is past. The Collinsville furnace first started December 29, 1858, since which time its working and products have been as follows:

First blast, commenced as above, and continued to June 20, 1859. Product, (gross tons) 1,308
Second blast, from July 12, 1859, to Jan. 5, 1860. Product. 1,307½
Third blast, from Feb. 2, 1860, to Dec. 8, 1860. Product. 1,905½
Fourth blast, from Dec. 29, 1860, to Aug. 12, 1861. Product. 1,444½
Fifth blast, from Sept. 8, 1861, to March 15, 1862. Product. 1,045½
Sixth blast, from May 12, 1862, to Sept. 12, 1862. Product. 1,160
Seventh blast, commenced Oct. 13, 1862. Product to January 1, 1863. ..... 621½

Total product 8,792½

This furnace is still turning out from 8 to 10 tons per day, with a fair prospect of continuing for several months.

The Forestville furnace first started Dec. 13, 1860, and blew out February 3, 1861, having produced (gross tons) 413
The second blast, was from May 5, 1861, to Jan. 20, 1862. Product 2,187
Third blast, from March 12, 1862, to June 5, 1862. Product. 809½
Fourth blast, commenced July 4, 1862. Produced to Jan. 1, 1863. 1,822

Total product. 5,231½

The working of this furnace has been attended with marked success. The stoppages have been only for want of stock, and never for repairs. By ordinary working, it is capable of turning out an average of ten tons of pig per day, counting from the *beginning of a blast to its close*. Of course, during the best part of its running, it turns out considerable more. What is most remarkable, the furnace is now running on its fourth blast—having made, up to this time, nearly 5,500 tons of iron—with the same hearth with which it started.

The last blast of the Northern Iron Company's furnace was from July 11, to December 4, 1862, during which time the product was 1,443 tons. Thus the average product of this furnace and that at Forestville have been within a small fraction of 10 tons per day each, reckoning from the time of first putting on the blast, which is four or five days before any iron is produced.—*Lake Superior News and Journal, January* 16.

Pacific Railroad.

We understand from the reports of the proceedings of Congress, that all the propositions amendatory of the original Pacific Railroad bill, were laid over, except that revoking the President's decision as to the gauge. This is now fixed by law at 4 feet 8½ inches, and is in accommodation with the Western and Eastern gauges generally.

☞ The Legislature of Washington Territory has passed a usury law fixing legal interest at 10 per cent. The question of organizing the new territory of Idahoe, on the Upper Columbia, east of the Cascades, was agitated. The opposition was strong in the Puget Sound region, but it was favorably considered at Lewiston and other mining districts within the boundaries of the proposed territory. They say they have no protection now but in vigilance committees. In Oregon the Bayse river mines were gaining in reputation.

The Illinois Coal Fields.--New Strata Discovered.

According to the census of 1860, Illinois is the third State in the Union, both as regards the number of bushels and value of coal produced, during the year ending June 1, 1860. During that year our mines produced 14,258,120 bushels valued at $964,187—only Pennsylvania and Ohio leading her in this resource.

Prof. D. C. Wilbur, Secretary of the Illinois Natural History Society, in a course of lectures at Bloomington, recently, demonstrated his reasons for believing that the coal fields of Illinois are much more extensive than has heretofore been supposed—that they really comprise about 40,000 square miles of the State. He advanced the idea that the coal beds lie in nearly horizontal strata, and that the depth at which coal may be found, depends mainly upon the topography of the country; hence that by ascertaining the altitude of any particular locality, the depth of the coal below the surface can be easily and certainly determined. This field has several centres, where it is considerably thicker than at other points. One of these centres, is, he thinks, near Bloomington, which theory is sustained by the boring at Broadwell, on the Chicago and Alton Railroad, where the vein is found to be three feet in thickness, and at a nearer point where it is four and a half feet; showing

that in a distance of a few miles towards Bloomington, the thickness of the strata has increased eighteen inches. In Fulton county is located another of these basin centres, there being three different layers or strata, respectively six, five and four feet—making a total thickness of fifteen feet of workable coal.

The confidence placed in Prof. Wilbur's statements by the people of Bloomington, may be inferred from the fact that the City Council made a liberal appropriation for the purpose of enabling him to prosecute a thorough investigation, particularly in regard to the promise for successful mining at or near Bloomington.

It is a consoling reflection that the supply of coal in Illinois is inexhaustible, and that the development of this mine of wealth is in the hands of one competent to the task. We trust the opening of new mines will increase the supply in an equal ratio to the rapidly increasing demand, and the growing scarcity of wood fuel.—*Chicago Tribune.*

New York Canals.

AUDITOR'S TOLL AND TONNAGE REPORT FOR 1863.

We give below some highly interesting extracts from the Toll, Trade and Tonnage Report from the Canal Department, recently submitted to the Assembly. This report is compiled from the statistical returns made to the Department by the Collectors of Canal tolls. The entire report, embracing a great variety of tables, which exhibit in figures the statistical history of our public works from their commencement to the close of navigation in 1862, makes a volume of more than three hundred documentary pages. These reports have now become important, showing the vast extent, in accurate detail, of our internal trade. It is sought after in other States and in Europe. The present Auditor has devoted much labor to elaborate them with statistical facts and information, having a direct bearing upon the subjects to which they relate.

The whole amount of tolls received is as follows:

Tolls on boats and passengers		$261,283
On products of the forest	$699,433	
On products of animals	65,466	
On prod'ts of vegetable food	3,637,118	
On other agricultural prod'ts.	2,208	
On manufactures	161,556	
On merchandise	117,444	
Other articles	244,435	
		4,927,660
		$5,188,943

The whole amount of tonnage transported on the Canals during the last season of navigation, ascending and descending, was as follows:

Products of the forest		1,569,674
Products of animals	68,269	
Vegetable food	2,422,598	
Other agricultural products.	3,169	
		2,494,036
Manufactures		364,877
Merchandise		167,927
Other articles		1,002,271
		5,598,785

The value of such tonnage is as follows:—

Products of the forest		$11,305,954
Products of animals	$11,117,228	
Vegetable food.	71,971,741	
Other agricultural prod'cts.	1,150,401	
		84,239,370
Manufactures		12,314,651
Merchandise.		83,640,903
Other articles		11,733,453
		$203,234,331

The total of freight or number of tons carried one mile during the last season of navigation, and the total movement of the several classes composing such tonnage is as follows:

Products of the forest		228,815,916
Products of animals	16,910,583	
Vegetable food	653,245,382	
Other agricultural prod'ts.	615,000	
		670,770,965
Manufactures		49,329,099
Merchandise.		49,798,250
Other articles		124,834,200
		1,123,548,430

The whole amount of tonnage arrived at tide water by way of the Erie Canal, from Western States and Canada, during the last season of navigation, was 2,594,837 tons. The whole amount of tonnage arrived at tide water, the product of this State, during the same period, was 322,257 tons.

The whole number of barrels of flour arriving at tide water, through the canals, during the last season of navigation, was 1,826,509

The whole number of bushels of wheat arriving during the same period was 32,667,866, which, turned into flour, calculating five bushels to the barrel, would make 6,533,573

Total in barrels. 8,360,082

The whole number of bushels of corn arriving at tide water during the same period was 23,709,822.

The total number of new boats registered during the last year was 850, with a total tonnage of 142,470, making an average tonnage of 167.

The whole number of lockages at Alexander's lock for the season was 34,977. The greatest number of lockages at any one lock was 38,999, at Lock 45, Frankfort.

Comparing the season of 1861 with that of 1862, it shows an increase in revenue of $1,280,158, and an increase in tonnage of 1,091,150, divided among the different classes, as follows:

Products of the forest, increase.		517,282
Products of animals, increase.	48,987	
Vegetable food, "	300,361	
Other agric'ltural prod'ts, increase	315	
		349,663
Manufactures, increase		84,621
Merchandise, "		32,831
Other articles, "		106,753
		1,091,150

The increase in lockages at Alexander's lock is 3,798. In flour and wheat, comprised in the returns of vegetable food, there has been an increase in tonnage the past year of 179,239, and an increase in the tolls of $611,465. In corn and oats there has been an increase during the same period of 68,746 tons, and an increase in tolls of $126,308. Under the head of "Products of the Forest," there was an increase in tonnage upon shingles, boards and scantling, of 150,750 tons, and an increase in tonnage upon timber, staves and wood, of 265,358, and an increase in pot and pearl ashes of 1,220 tons. Under the head of "other articles," there was an increase in the tonnage of mineral coal, for the same period of 94,570, and a decrease in sundries of 119,556 tons.

This apparent decrease in tonnage in sundries is caused by transferring "apples" to vegetable food, and "iron ore" to other articles. These two articles were formerly classed with "sundries." If this change had not been made, there would have been an increase, under this head, of 50,512 tons. The general result is not effected by these changes of classification.

The whole number of bushels of barley transported on the Canals in 1861, was 2,444,083

The whole number transported in 1862, was 2,764,916

Showing an increase in 1862, of 320,833

The number of bushels which arrived at tide water in 1861, was 2,046,667

The whole number which arrived in 1862, was 2,562,659

Showing an increase in 1862, of 515,992

The whole amount of tolls received on barley in 1861, was $62,861

And in 1862, including toll on barley malt. 66,760

Showing an increase in tolls of $3,899

This small increase of tolls in 1862 on an increased delivery at tide water of nearly 600,000 bushels of barley and barley malt, over 1861, presents an interesting problem in Canal statistics. A satisfactory solution may be found in the place of shipment and distance carried. A larger proportion than usual of barley came to tide water from the Champlain Canal the last season than in 1861. There were in 1862, 6,057 bushels cleared at Buffalo, which paid $11,289 tolls. Cleared at Whitehall, 17,050 bushels, and the tolls paid thereon were only $6,549, showing that the amount of the toll receipts depends very much on the distance the property is transported on which the toll is charged.

The following table shows the tons of each class of property first cleared and carried on the canals from the opening to the close of navigation in 1862. The *second* column of figures exhibits the tolls paid on boats and passengers and on each class of property carried, on the rates of toll imposed by the Canal Board in the winter of 1862, which continued uniform through the season of navigation. The *third*, what tolls would have been on the same tonnage of each class under the rates charged in toll sheet of 1859; and the *fourth* shows what the toll receipts would have been under the rates imposed in 1860. It needs no further argument than this plain exhibit to demonstrate the fact that the affairs of our canals have been wisely and successfully conducted to promote the best interests of the State:—

	Tons transported in 1862.	Tolls received in 1862 on the rates of that year.	What tolls would have been on the same tonnage on the rates of 1862.	What tolls would have been on the same tonnage on the rates of 1860.
Boats and pass'rs 1862.		$261,283	$261,283	$261,283
The Forest:				
Furs and peltry	109	79	263	263
Product of wood	1,569,674	699,433	577,293	590,594
Agricultural:				
Products of animals	68,269	65,466	49,238	65,466
Vegetable food	2,422,598	3,637,118	2,607,733	2,668,521
All other agricultural products	3,169	2,208	2,208	2,208
Manufactures	364,877	161,556	202,123	207,829
Merchandise	167,927	117,444	101,568	199,193
Other articles	1,002,291	244,435	181,739	240,764
Aggregate	5,598,785	$5,188,943	$3,983,185	$3,235,558
Deduct tolls on boats and pass'rs		261,283	261,283	261,283
Tolls on property		$4,927,660	$3,721,902	$3,974,275

The increase in 1862 over 1859 on the same amount of tonnage is $1,205,758, and over 1860,

$953,085. On turning to the Auditor's Financial Report, we find an increase of receipts in 1861 over 1859 of $723,113, and a further increase in 1860 over 1859 of $258,879, making a total gain in three years of $3,140,833, simply and entirely by bringing the rates of tolls to a revenue standard. The canal tonnage increased from 1859 to 1862, 1,817,101 tons, so that it is quite clear we have not driven traffic from the Canals by increasing our rates.

Railroad Earnings--Weekly.

The earnings of the Grand Trunk Railway for the week ending Feb. 14, 1863, were:

Passengers	$17,497 74
Freight and live stock	68,800 05
Mails and sundries	3,900 00
Total	$90,197 79
Corresponding week, 1862	89,568 25
Increase	$629 54

The earnings of the Chicago and Alton Railroad for the 3d week of Feb., 1863, were:

	1863.	1862.
Passengers	$12,548 35	$6,604 47
Freight	18,533 78	8,675 35
Sundries	1,035 33	899 33
Total	$32,117 46	$16,179 15
Increase	$15,938 31	.....
Total since Jan. 1	$207,766 34	$136,596 60

In consequence of a change in the contract with the Joliet road, their proportion is included for both years.

The earnings of the Galena and Chicago Union Railroad for the 3d week of February, 1863, were $29,526 34
Same week, 1862 23,569 82
Increase $5,956 52

The earnings of the La Crosse and Milwaukee Railroad for the week ending February 14, 1863, were $19,853 96
Same week, 1862 13,824 43
Increase $6,029 53

The earnings of the La Crosse and Milwaukee Railroad for the week ending February 21, 1863, were $16,104 24
Same week, 1862 14,153 43
Increase $1,950 76

The earnings of the Chicago and Northwestern Railway for the 3d week of February, 1863, were $21,892 86
Do., 1862 9,905 30
Increase $11,987 56

The earnings of the Toledo and Wabash Railroad Company for the 3d week of February, 1863, were $24,035 75
Same week, 1862 10,455 56
Increase $13,580 19

The earnings of the Cleveland and Toledo Railroad for the 3d week of February, 1863, were $37,785 00
Same week, 1862 21,876 00
Increase $15,889 00

The earnings of the Milwaukee and Prairie du Chien Railroad for the 2d week of Feb., 1863, were $38,756 92
Same week, 1862 31,418 04
Increase $7,338 88

The traffic of the Great Western Railroad for the week ending Feb. 20, 1863, was as follows:

Passengers	$16,271 25
Freight and live stock	54,985 47
Mails and sundries	1,305 86
Total	$72,562 58
Corresponding week of 1862	50,970 20
Increase	$21,584 38

The earnings of the Chicago and Rock Island Railroad for the 3d week of February, 1863, were $31,798 00
Same week, 1862 20,642 00
Increase $11,156 00

The earnings of the Michigan Southern Railroad for the 3d week of Feb., 1863, were $55,669 00
Same week, 1862 37,380 00
Increase $18,289 00

The earnings of the Michigan Central Railroad for the 3d week of Feb., 1863, were $63,156 00
Same week, 1862 38,776 00
Increase $24,380 00

Winona and St. Peter Railroad.

We are informed that the Winona and St. Peter Railroad Company have effected a purchase of iron sufficient to lay the track for an additional distance of fifteen miles on their road, and that the iron will be delivered at Winona immediately after the opening of the river navigation. This will compiete the road to St. Charles, a distance of twenty-five miles from Winona, whereupon trains will run regularly between St. Paul and the point named. Should the present prospects and intentions of the company be realized, the road will be completed and in running order to Rochester, Minn., by the first of next October.—*Winona, Min., Rep.*

Beet Sugar.

It is a fully established fact, from experiments made in Illinois and Ohio during the past season, that good strong grained sugar can be successfully produced from beets, properly cultivated on our Western soils.

In France and Germany beet sugar has been produced on an immense scale for years, with great profit and success, upon lands costing from $300 to $500 per acre; and it is evident its production there costs fully double the amount required to produce the same upon our low priced western lands. Impressed with its importance to the State, the Illinois Central Railroad Company have re-published in a pamphlet of thirty-six pages, Mr. Klippart's paper on beet culture. In his approval of the able article, the President says: "The United States pay from $35,000,000 to $40,000,000 annually for foreign sugars. It is believed, that by careful culture, by availing of the experience acquired in thirty years of this culture in Europe, and by cheapening the process of manufacturing, sugar can be grown to advantage on our prairie soil. From a very small beginning in France, within the life of this generation, the sugar crop has become the most important agricultural crop of the Empire."

But to develop the production of sugar, requires a combination of proper soil, necessary machinery, and skilled labor; all of which can be easily accomplished by an association having the requisite amount of capital at their command. We are glad to learn that Messrs. W. H. Belcher and R. W. Bender who have had many years' experience in the business of manufacturing and refining sugars, and who have thoroughly investigated the Beet Sugar question, contemplate organizing a company with a capital of from $50,000, to $100,000, in shares of $100 each; about $10,000 of the amount being already secured. It is proposed to purchase the land, and prepare for manufacturing as soon as the requisite amount is paid in, and the company organized and incorporated. The projectors state that if the company own the land, and manage its culture and manufacture, sugar can be produced at four cents per pound, equal to strong brown Havana box sugar, now worth eleven cents.

We are glad to aid the introduction of any branch of manufacturing industry into the Northwest, especially in the production of articles which may add so immensely to our own national wealth, and develop the resources, and increase the independence of the North. Persons interested in this enterprise can learn full particulars upon application to the gentlemen above named.—*Chicago Tribune.*

New Copper Mines of Canada.

From all accounts the famous "Acton" mine of Canada will not long be the only paying mine of that region. Responsible parties here have taken the valuable Wickham property, and are proceeding as rapidly as possible to develope it thoroughly. Dr. Jackson and Professor Chace report very strongly of the Wickham mine. The Company has been already organized. It possesses a cash capital of $50,000, and is in good managing hands. Of the Wickham, the Montreal *Commercial Advertiser* says:

"Sufficient ore has been raised even in the construction of the mine to yield a handsome profit on the work done—which is something unusual—and when in full working order, there is every reason to believe that its returns will increase in proportionate ratio. We congratulate our American friends on their good fortune in securing this important mine, but at the same time we would like to see our own capitalists a little more alive in mining matters, so that at least a small portion of the profits of our mineral wealth would remain among us."

☞ The St. Andrews Railway Company, unable to raise money to meet its liabilities, has voluntarily "gone into liquidation," with a view of selling out, if possible to another company, which would make this now part of a system of railroads connecting with St. John and Calais, Me.—*Freeman.*

Gold Mining in New Zealand.

At no time before were the reports from New Zealand about the gold mines so favorable as by the latest accounts. Fortunes are being made with almost fabulous rapidity, and the rush thither is unprecedented. According to one local journal, the province of Otago was increasing its population by thousands every week. Otago occupies the southern part of the larger island, (New Munster,) aud is situated nearly under the 45th parallel of south latitude. The port of Dunedin was overflowing with passengers from Australia. Within one week four ships had arrived at Port Chalmers, bringing thirty-two hundred passengers. At the Dunstan "diggings" three thousand one hundred and thirty-three ounces of gold were left with the police for transmission, within five days. Yields of three or four ounces of yellow dust per day, per laborer, were thought of little account, and several were reported to be taking it out by the pound.

Among the articles reported as scarce are bank notes, wherewith to purchase the precious metal. All kinds of produce had advanced to extravagant prices, and rowdyism was becoming disgustingly prevalent.

The whole population of New Zealand, as ascertained by a census, before the gold excitement broke out, was 106,000, of which about fifty per cent were natives. But with this discovery it is probable that the foreign element has already doubled, and will continue to advance at an unusually rapid rate for years to come. The climate and soil are for the most part among the best on the globe, and the situation of the islands is well adapted to European constitutions. One of these days another nation will be born there.

American Railroad Journal.

Saturday, March 7, 1863.

Stock Exchange and Money Market.

The adoption by Congress of the various financial measures proposed by the Secretary of the Treasury, is a final assurance that the money necessary to carry on the Government, and maintain our naval and military force, shall not be wanting. The people of this country are receiving for labor and materials furnished, a million and a half dollars per day. A large proportion of this amount must of necessity seek investment and be absorbed in Government stocks and securities. It is therefore merely money passing from one hand to the other, both being those of the people of the United States, and both employed in supporting and defending the body politic. We cannot conceal our admiration of the ability which has been manifested by the Secretary of the Treasury in the general conduct of his department. At the outset he unquestionably made some mistakes, but as he began to comprehend the necessities of the war on the one hand, and the immense resources of the country on the other, he rose to his position and became equal to his responsibilities. With a single eye to the great results before him, he has become master of the situation, and whatever may be the result of bad management elsewhere, the Treasury stands up replete and powerful.

We are not yet prepared to discuss the details of the financial bills passed by Congress, without closer examination than we have yet had time to give them, but in the Circular of Hallett & Co.,

which we republish in another column, will be found an able analysis of the loan bill, to which we refer our readers for ample information on the subject.

One of the great duties of the financial journals of the day, is to present their readers sound and useful information with regard to the actual condition of the Stock and Money Market, so that the funds usually employed there shall not be made the sport of speculators, always ready to take advantage of public difficulties and private apprehensions. Too many persons looking to the movements in Wall and William street, seem to think that the clamorous opinions of a few scores of operators, during the hours of 'Change, are decisive of all State questions, and that on the noisy assertions of an excited long or short, the fate of thirty-three millions of people actually depends. Not that the majority of people really believe this, but they sometimes *act* as if they did. And thus the combinations of about one hundred persons who have abandoned the sale of other commodities for that of gold, have been astonishingly successful in nearly doubling the price of it in that currency which buys all other commodities of domestic production at its full face and at about former prices. Still more scandalous is the fact, that no such amount of gold as is reported to be sold daily, is really sold. The speculation is carried on by the use of bank paper, certificates of deposit and certified checks.

These are all that are sold, for there is not gold enough in all the city banks to respond to the total amount of the reported sales, and we know from the Custom House returns that but a comparatively small amount of the quotations actually has gone abroad. We therefore hope to see juster views obtaining with regard to these speculations in gold, and since loans on the article beyond its par value, are now prohibited by law, and the transactions in the street are to pay their way with stamps, like other contracts before they are valid, we expect to see the whole business shrink into its true proportions, and change into *bona fide*, healthful transactions. That a bank certificate of $10,000 should pass through twenty hands a day as gold, while the gold itself is never seen or counted, or handled, is a gross wrong, if not a mischievous fraud on the public. When gold now changes hands we believe a change of possession will have to follow. We have no objection let it be understood to the sale of gold. Whenever it moves in earnest it does great good, it settles up all differences, squares accounts, and keeps the manufacturers, importers and merchantmen in countenance. But when it pretends to be gold, and is not even pinchbeck, but bank checks, soiled and nearly torn in pieces in the constant transfer from hand to hand and nothing else, then it is time that the bubble was pricked, and its emptiness made known to the timid and credulous.

The utter absurdity and unsoundness of the recent rise in gold is so apparent, that some leading financial journalists as well as prominent bankers are discussing the propriety of an early return to specie payments both by the Government and the banks, and they contend it can be effected by a large purchase of gold by the former, for the redemption of its demand notes at a future fixed day, and by the latter, with the same object at some early period. As specie begins to flow into the Treasury through the Custom House in pretty large amounts, we imagine the Government will have little necessity to go into the market as a purchaser for any present purpose it has in view.

It has been frequently stated in some quarters, inimical to the financial policy of the country, that the Government could have carried on the war on a specie basis alone, and the example of France is quoted as authority for the statement. Whatever may have been the method of the first Napoleon to fill his military chest, as often by forced loans and the spoliation of conquered territories as any other, the present Emperor finds the Bank of France a most important financial support. We have before us an official return in the *Moniteur*, of the condition of that institution in the months of January and February last. On its capital of 182,500,000 francs, or $36,500,000, it has a circulation in *notes* of 825,402,925 francs, and it is also subject to Treasury drafts of 92,263,622 francs, while its advances to the Government as represented by securities, amount under one particular head to 107,220,250 francs. Under the convention of June 10, 1857, is charged 60,000,000 more, and on other public securities, also 42,552,140 francs. And more than this, the bank of France is the Government agent in the purchase and transfer of coin, whenever necessary for political or financial reasons, and has on many occasions compelled the Bank of England to raise the rate of interest to prevent the exportation of the article beyond the limit of safety.

From appearances we judge that the banking bill of Mr. Chase is likely to attract the attention of capitalists at an earlier moment than was anticipated. Associations are announced as about to be formed in various parts of the United States.

Money remains easy; the earnings of our leading railways are enormously large, the lake navigation has actually commenced, (the straits of Mackinaw being entirely free from ice,) the Raritan and Delaware and Morris Canals are to be opened in a few days, and the produce of the West is now accumulating in such enormous quantities for early transportation, that the Central Railroad as an example, is short 2,000 cars as is reported, for the business already secured, and will have to provide accordingly.

To close this article already quite extended, we quote from the correspondence of the London *Morning Star* of February 14, the view taken of our present situation by its American correspondent. It is a looking-glass which reflects the truth:

"Congress will adopt substantially Mr. Secretary Chase's scheme for raising the means for carrying on the Government and defraying the expenses of the war. He is by far the ablest financier in the country, and he has in a good degree the confidence of intelligent capitalists. The receipts from the taxes and imposts will be upwards of $100,000,000, which will not only suffice to pay the interest on the demand notes (one cent per day,) the interest on the bonds (at 6 or 7 per cent.,) and the interest on the actual national debt, but leave a handsome sum for current expenses. Next year the receipts of the Government from these sources will be upwards of $200,000,000, for then the taxes imposed by Congress during its late session will have come fully into operation. The credit of the Government was never better, and its notes are fast taking the place as currency, of the notes of all the banks. Nor has this currency depreciated, as many ignorantly suppose. They are received cheerfully in all business transactions; nor has the price of lands, of houses, of flour, of beef, of poultry, &c., increased to any degree worth speaking of. Under these circumstances the exportation of all sorts of American produce is great, for the differences in exchanges with Europe enables the shipper to make money even if he should sell his flour, wheat, pork, cheese, &c., in England or Europe generally for less than it cost him here!"

The preceding remarks were in type, and ready for the press, when the news of Thursday's reaction in the Gold market reached us. What we have already stated has therefore been singularly appropriate to the occasion. Under the operations of the new act of Congress the fall in price is likely to continue, though temporary reaction will be attempted.

The tax on Gold is ½ of 1 per cent. on all transactions over 3 days. All regular business is left untouched, and any party desiring to buy for shipment or to hoard can do so as freely as ever.

All loans above par on gold are illegal and void. All business in gold pays a tax of ½ per cent to the Government upon any operation over three days, and a stamp tax besides, which makes it cost full twelve per cent per annum to carry gold, on the currency value.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Indianapolis and Cincinnati, 75; New Jersey R. R., 159@160; Central New Jersey, R. R., 175; Goshen Branch bonds, 104; Detroit, Monroe and Toledo 1st mort., 104½; Buffalo and Niagara Falls R. The Culture of Flax.

A correspondent of the *New England Farmer* thinks "the 16th of May about the best time to sow flax, although freezing the ground a little will not kill the seed after it is sown. Loamy land is good, and gravelly land in a wet season bears good flax. The land should be clean, that it may be free from weeds. We get from 300 to 500 pounds of lint per acre, and from seven to twelve bushels of seed, both of ready sale at high prices.'

Nevada Silver Mines.

A report from the Committee on Ways and Means says that the amount of silver bullion brought from the Nevada mines in 1862, is stated to have been 200,000 pounds, valued at $6,000,000. It is thought these figures will be doubled during the present year, and in 1866 will reach $25,000,000.

St. Domingo Cotton.

The American West India Company whose principal office is in this city, is preparing to enter upon the cultivation of cotton in St. Domingo. A good article of long staple can be raised on the Company's lands in that island at 4½cents per lb.

Telegraph Line to the Holy City.

It is reported that the Syrian telegraph is already in operation as far as Ourfa, at the top of the Desert, beyond the Euphrates, and a branch line will soon be extended to Aleppo, Damascus and Beyrout, from which latter station a line will run north to Joppa and Jerusalem. Travelers in the East may therefore soon order apartments in Jerusalem by telegraph.

☞ An oil train passed east over the Atlantic and Great Western Railroad last night, with nearly 23,000 bbls. of oil on board! The train consisted of 38 cars and two locomotives.—*Jamestown Journal, Feb. 20th.*

Pittsburg and Steubenville Railroad.

We learn that the contractors for the Pittsburg and Steubenville Tunnel have commenced work.

Ahlstrom's Patent Expansion Screw Fastenings.

We would again call the attention of Architects, Engineers, and Government contractors to the Expansion screw fastenings of Mr. Otto Ahlstrom. These are beyond all question, the readiest, cheapest and securest method of fastening, anchoring and retaining the foundations of light houses, beacons, buoys, bridges, dams and fortifications. And as at this time the harbor of New York is to be placed in a complete state of defence, we particularly recommend the committee of the Common Council, having the important subject in charge, to avail themselves of Mr. Ahlstrom's admirable improvements. They have been successfully used by the United States Government for the last six or seven years.

☞ The Erie *Dispatch* says that the Cleveland and Erie, Erie and Pittsburgh, and Philadelphia and Erie Railroads have under advisement the erection of a Union Depot building, at the foot of State street, at a cost of about $150,000.

Railroads in South America.

By the last arrival from Aspinwall we learn the restoration of tranquility in Colombia, formerly New Grenada, is to be followed up by an active prosecution of the internal improvements of that country. The work on the railway from Calis to Buenaventura, a port on the Pacific, originally surveyed by Col. J. D. Williamson, a celebrated American Engineer, is about to be resumed, and large amounts of iron, engines, machinery &c., of the value of one million of dollars have been ordered in this city. The same gentleman has entered into similar railway contracts with the Governments of Quito and Peru to the amount of eight millions of dollars, each party making a large deposit to be forfeited in the case of the default of either, Peru has five millions of dollars in its treasury which are to be expended in public works, and Chili is very active in the same direction. Sr. Santa Maria, the new minister of Finance, has entered upon his duties, and the Railway system of the country is progressing rapidly. The Valparaiso and Santiago Railroad is now open to Los Loros. The Minister of the Interior, accompanied by the contractors and others, went over the line as far as constructed, and expressed much satisfaction with the work.

The Valparaiso street railway will be completed in about a month.

A new line will soon be commenced between Chillan and Concepcion.

Indeed all the South American republics are anxious to advance to the first rank of Nations, by fostering liberal institutions, and promoting industry, foreign commerce and internal traffic. The Government of Colombia takes the lead in the largeness of this policy, and its magnificent and fertile country offers tempting returns for intelligent investments. It is to be hoped its relations with our own country, towards which it has the most friendly feelings will no longer be embarrassed. There has been a domestic struggle there between the liberal and the clerical party, for and against the Constitution, with which foreign nations had nothing whatever to do, and the proposition of our Secretary of State to intervene with an armed force, without the least justification, was a wretched mistake which has jeoparded our interests on the Isthmus, stagnated our trade in that quarter, hindered our communications with California, and betrayed a strange inconsistency which has done our country and our diplomacy the greatest injury in the eyes of the world.

French Coinage.

There are fourteen pieces of Governmental money actually in circulation in France:

Gold .....5, of 5, 10, 20, 40, 100 franc pieces.
Silver .....5, of 20 centimes, 50 c., 1, 2, 5 francs.
Bronze ....4, of 1, 2, 5, 10 centimes.

In 1862, the value of the gold coin struck in France, was 213 millions of francs; in 1861 only 98 millions. Of the new bronze coins, on which the Emperor's head wears a laurel wreath, three millions francs' worth have recently been prepared for circulation. We wonder much, that our own Government does not strike off nickel cents in sufficient amounts to do away with the present scarcity, and also use the new, cheap, and beautiful silvery metal Aluminium for its three and five cent. pieces.

Freighting on the New York Central R. R.

The amount of freight being sent forward on the New York Central Railroad at the present time, is unparalleled in the history of the road. It is stated that freights are constantly accumulating at Buffalo faster than transportation facilities can be furnished. We learn that nearly 2,000 cars are now loaded per day at Buffalo—most of it through freight. It is almost impossible to get local freights shipped from Buffalo. One firm here have been obliged to freight over the Buffalo, New York and Erie road via Avon, to this city. This crowd of freight will probably continue until the opening of navigation.—*Rochester Dem.*

Trade of West Africa.

Several British commercial and financial associations have recently sprung up to favor a more active trade with Western Africa. The last made up returns of imports by England from thence are thus given, as well as the imports for 1859:

	1860.	1859.
Barwood	£8,989	£6,943
Camwood	7,870	7,351
Copper Ore	648	1,163
Cotton	6,094	5,689
Ebony	3,797	2,613
Guano	2,590	1,404
Gum animi	222	753
Gum copal	865	1,592
Oil (palm)	1,684,543	1,421,029
Teeth (elephants')	35,672	41,875
Wax (bees')	2,134	7,724
All other articles	23,702	19,555
Total	£1,776,565	£1,517,691

The subjoined table shows the character of the commodities shipped in 1860, and 1859, and that, with one exception, all the articles exhibit increases over the preceeding year:

	1860.	1859.
Apparel	£24,158	£17,576
Guns	61,613	39,383
Gunpowder	100,169	71,384
Beads	8,388	3,074
Brass manufactures	20,820	18,974
Cottons	464,661	326,445
Earthenware	23,227	11,809
Hardware	50,314	47,909
Iron and steel	25,147	20,705
Silk manufactures	14,421	7,992
Spirits (British)	15,695	8,617
Staves	56,538	68,447
Woolens	11,074	7,042
All other articles	75,120	61,670
Total	£951,205	£696,027

We should think that some portion of this trade might be diverted to New York, particularly as

Liberia the most flourishing colony on the African coast is the result of American enterprise and philanthrophy. Indeed there are some houses in this city which have for several years past carried on a very profitable traffic with certain places on the West coast, but we see no reason why it should not be greatly extended.

UNION FOUNDATIONS.—A Story of American Nationality as a Fact of Science. By Capt. E. B. HART, U. S. Engineer.—D. VAN NOSTRAND, Publisher, N. Y. (61 pp.)

This pamphlet shows, by scientific analysis, through the media of physical geography, vital statistics, and political economy, that the Union is our only bond of peace, prosperity and happiness. The author has ably acquitted himself of his task.

Railways in the United Kingdom, 1863.

The capital expended to date on railways open for traffic was	£355,107,280
The average cost per mile	31,188
Total traffic receipts	4,470,700
Average receipts per mile for the y'r	2,532
Working expenses, rates and taxes	48 per cent.
Length of lines open at the end of the year	11,386 miles.
Percentage of traffic to receipts on capital expended	8.12 per cent.
Percentage of profit on capital expended	4.22 "

Effect of the Gold Fever.

The Lowell *Courier* has been told of a rather peculiar financial operation in that city, within a few days. A gentleman bought a barrel of flour, for which he tendered a twenty dollar gold piece, and from which $10 50 were to be taken. He received back, in bills, the balance of his twenty dollar gold piece and the premium it brought, the whole amounting to $21 50! This is one of the most novel "operations" we have ever heard of. The purchaser it will be seen, got a barrel of flour, costing $8 00 more than he would have had to pay for the same a few weeks ago, and $1 50 in cash more than the established value of the coin he tendered from which the price of the flour was to be taken.

Consolidation of Railways.

The stockholders of the Pittsburg, Fort Wayne and Chicago Railway have adopted, by a large majority, the plan of consolidation with the Cleveland and Pittsburg. The contract was ratified with the following understanding, adopted in the form of a preamble and resolution at the meeting:

Whereas, it is stated in the annual report of the Board of Directors that it was the clearly declared purpose of the parties conducting the negotiation on the part of the Cleveland and Pittsburg Railroad Company that this company should have the virtual control of the policy and management of the business of both companies under the provisions of the contract; therefore,

Resolved, That we approve of the contract with the Cleveland and Pittsburg Railroad Company, submitted by the Board of Directors on the express condition that the organization, by laws and regulations now in force, of the Pittsburg Fort Wayne and Chicago Railroad Company, shall in all cases be the rule to govern, whether as to the appointment of the officers named in articles fifth and sixth, or as to determining and regulating their duties or the duties of their subordinates, and that the manner of executing the contract shall be such as to conform to the action of the Board of Directors of the Pittsburg Fort Wayne and Chicago Railway Company, so as to leave with that company the same power it now has in the appointment of the general superintendent, general freight agent and general passenger agent.

The Pacific Railroad.

The Sacramento (Cal.) *Daily Union* of the 9th ult. contains a long and interesting account of the opening of the work on the Pacific Railroad—the California link of the continental chain that is to unite American communities now divided by thousands of miles. The inauguration took place at Sacramento, and was attended by a large concourse. Gov. Sandford presided, and made a speech descriptive of the advantages of the railroad when finished, and congratulating the people on the prospect of a speedy realization thereof. Prayer was then offered by Rev. J. A. Benton, and the Governor proceeded to shovel the first earth for the great undertaking, amid the cheers of the assemblage. Speeches were thereafter made by President Crane of the State Senate, J. H. Warwick, member of the House from Sacramento, J. A. Banks, member from San Francisco, Walter Van Dyke, Senator from Humboldt County, Rev. Dr. Peck, Wm. H. Sears, member of Assembly from Nevada, Newton Booth, Senator from Sacramento County, Dr. J. F. Morse and Charles Crocker, Esq. The affair was one of great enthusiasm, and if the great enterprise is as successfully finished as it was begun, it will be happy indeed for the prosperity of the Golden State and for the country at large.

Gold Discoveries in Western Nebraska.

The gold mines of Western Nebraska and Dakotah are developing mineral resources of surpassing richness. Several letters of recent date have been received in this city from gentlemen known to be in all respects trustworthy, stating that the entire region at the eastern base of the Rocky Mountains, commencing at the head waters of Wind River, only about 300 miles from Fort Laramie, and extending northwardly and westwardly to the head waters of the Missouri River, has been found to contain deposits of gold of such quantities as to render mining exceedingly profitable. Several gentlemen who have heretofore resided in this city have written to their friends here stating that the newly discovered gold regions are infinitely superior to those of Colorado. Bannock City had not fifty inhabitants in the early part of September last; it has now a population of more than 1,000, and the emigrants are rapidly pouring in from all quarters. The earnings of miners, as stated by these letter-writers, are almost fabulous, and if they were not well known and trustworthy we could not believe their statements.—*Nebraska City Republican.*

A New Canal Project.

It is stated that by constructing a canal about three-fourths of a mile in length, from Big Stone Lake to Lake Traver, steamboats from St. Paul could navigate both the Minnesota River and the Red River of the North to Lake Winnipeg, a distance of 700 miles! The country traversed by these rivers is surpassingly fertile, and capable of sustaining a dense population. Lake Winnipeg is larger than Lake Ontario, and receives the Saskatchawan River from the West. The Saskatchawan River is navigable to a point near the Rocky Mountains, 700 miles west of Lake Winnipeg, and only 150 miles east of the celebrated gold diggings on Frazer River, in British Columbia. The digging of that one mile of canal would, therefore, enable a steamboat at New Orleans to pass into Lake Winnepeg, and from thence to near the Rocky Mountains, some 5,000 miles! A bill has been introduced into the Senate, which makes provision for the building of the canal.

Currency and Prices.

The principle topic of discussion in financial circles is upon the following section of the loan bill:

"SEC. 2. And be it further enacted, That the Secretary of the Treasury be, and he is hereby, authorised to issue, on the credit of the United States, $400,000,000 in Treasury Notes, payable at the pleasure of the United States, or at such time or times, not exceeding three years from date, as may be found most beneficial to the public interest, at a rate not exceeding 6 per centum per annum, payable at periods expressed on the face of said Treasury Notes, and the interest on said Treasury Notes, and on certificates of indebtedness and deposit hereafter issued shall be paid in lawful money. The Treasury Notes thus issued shall be of such denomination as the Secretary shall direct, not less than $10, and may be disposed of on the best terms that can be obtained, or may be paid to any creditor of the United States willing to receive the same at par; and said Treasury Notes may be made a legal tender to the same extent as United States Notes for their full value, excluding interest, or they may be made exchangeable, under regulations prescribed by the Secretary of the Treasury, *by the holders thereof*, at the Treasury in the City of Washington, or at the office of any Assistant Treasurer or depositary designated for that purpose, for United States notes equal in amount to the Treasury notes offered for exchange, together with the interest accrued and due thereon at the date of interest payment next preceding such exchange; and in lieu of any amount of said Treasury Notes thus exchanged or redeemed, or paid at maturity, the Secretary may issue an equal amount of other Treasury notes, and the Treasury notes so exchanged, redeemed, or paid shall be canceled and destroyed, as the Secretary may direct. In order to secure certain and prompt exchanges of United States notes for Treasury notes, when required as above provided, the Secretary shall have power to issue United States notes to the amount of $150,000,000, which may be issued, if necessary, for such exchange, but no part of the United States notes authorized by this section shall be issued for or applied to any other purpose than said exchanges; and whenever any amount shall have been so issued and applied, the same shall be replaced as soon as practicable from the sale of Treasury notes for United States notes."

According to the above section—

1st. The Secretary is authorized to sell the $400,000,000, of bonds upon the best terms that can be obtained for them.

2d. The Secretary is further authorized to pay these bonds to any creditor of the United States willing to receive them at par.

In regard to the option of making these bonds a legal tender for the face value, or of converting them into legal tender notes, we have the authority of the Conference Committee for stating that

3d. The *holders* are empowered to avail themselves of the legal tender option for their full value, excluding interest.

4th. The holders are also empowered to exchange these bonds for legal tender notes with the accrued interest.

The power "to make" these bonds a legal tender or convertible into legal tender notes rests alone with Congress and that power cannot be delegated to others. The Secretary may sell the bonds at the market price, or he may pay them out to creditors willing to receive them at par—and he may prescribe the rules for conversion, but the option of using

the legal tender power created by Congress, rests with the *holder* of the bonds and not with the Secretary. The interest upon these bonds being payable in *currency*, and their maturity fixed at so short a date, without the option of converting them into long bonds, it is clear that they will not be taken for investment to any great extent, so long as the 5.20s, and 20 year 6s, and certificates of indebtedness are at or below par, with interest upon them payable in coin, nor will they be held for *temporary* loans, since the holder receives no interest upon conversion other than that which has accrued up to the date of interest payment next preceding such exchange.

It is therefore, probable that the holders of the $400,000,000 in bonds, will convert them into legal tender notes, to the extent of $150,000,000, and that the amount of National currency should they be so used, will be increased that amount. To facilitate the holders in the "certain and prompt" exchanges of these bonds for legal tender notes, $150,000,000, additional currency is authorized by Congress, and these notes cannot be issued or applied to any other purpose.

The National currency, provided for by Congress, may be stated as follows:

Legal tender acts of 1862	$300,000,000
do. do. 1863	150,000,000
To redeem Treasury notes convertible into legal tender.....	150,000,000
Postal currency.....	50,000,000
New bank act	300,000,000
	$950,000,000

The notion that *prices* are mainly determined by the quantity of money in circulation, rests necessarily upon the utterly erroneous assumption that the coin and current money in a country is the representative and equivalent of all the labor and commodities in course of exchange; so that in proportion as there is more or less of this representative there goes more or less of the things represented in exchange for it.

For instance. The products of capital and labor in the United States in 1859, by census valuation, amounted to the sum of thirty-eight hundred millions of dollars, and the real and personal property of the country in 1860 was valued at sixteen thousand millions. Now supposing that but half the products of 1859, and only a twentieth of the nation's property went into market in 1860, the exchanges of the year —if the property and commodities were sold but once in the year, would require twenty-seven hundred millions of dollars in money to represent the values exchanged; but the specie and currency in circulation in 1860, did not together amount to 350 millions, or one-eighth of the sum.

Arthur Young, (Progressive Value of Money in England,) shows the advance of prices of commodities and of the quantity of money thus:

	Advance prices of commodities.	Advance quantity of money.
	per ct.	per ct.
In 16th century over the 15th,	24	380
" 17th " " " 16th,	80	875
" 18th " " " 17th,	11	1120

It is further to be observed that, the average prices of the 17th century over those of the 15th, covering a period before the use of paper money, exhibit an advance of 111 per cent. Whilst the average prices of the 18th century, in which there was a great use of paper money, besides the immense increase of the precious metals, show an advance upon those of the 17th century of only 11 per cent.

The following period of our commercial history exhibits corresponding results, strongly showing the absence of the alleged proportion between prices and currency:

Taking the bank note circulation and bank deposits to indicate the active medium of circulation, or as the best attainable measure of the relative movements of business at different periods, we find the following relation, or want of relation, between *prices* and money and its representatives.

	1855.	1860.
Bank notes	$186,952,223	$207,102,477
Bank deposits..	190,400,342	253,802,129
	$377,352,565	$460,904,606

Relative increase of circulating medium 22 per cent.—*Hallett's Financial Circular.*

Iron Freight Cars.

J. M. Davidson is now making fifty iron cars for the American and Adams' Express Companies. These cars are becoming all the rage. In ten years from now a wooden freight car will not be tolerated on any of our leading railroads. Mr. Davidson is now making nine iron cars per week. This is 468 in a year. The most of his cars are taken by the Central Road.—*Albany Statesman.*

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,
RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & Co., of Boston.
Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.
They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.
The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT RE-OILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS
For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.
They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.
Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.
ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.
Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.
Having made this branch of Engineering a SPECIALITY the past ten years, with uniform success, they confidently offer their services to those requiring such aid.

QUARTZ MILLS
OF THE MOST APPROVED KIND,
MANUFACTURED BY **BURDON, HUBBARD & CO., 102** Front st., BROOKLYN, N. Y. Also Agents and manufacturers of the BEST PATENT PREMIUM AMALGAMATORS, the best and simplest in use for saving both **fine** and **coarse** gold.

INTEREST ALLOWED ON DEPOSITS.
HENRY MEIGS, Jr. WM. ALEX. SMITH.

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES," because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000 and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued by the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house; it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, **25** cents, Brass, **31** cents; Silver-Plated, **50** cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of **$1.35.**

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

Chicago Ship Canal.

The defeat of the project to enlarge the Illinois and Erie Canals, at the late session of Congress, has roused the people of Chicago to new and extraordinary exertions to "obtain a more direct outlet to tide water for the products of the North West." To effect this, all Chicago is moving as one man. It is also operating by means of well known agencies at places more remote, and the combinations which failed in Washington are to be re-constructed for another field of action, and with considerable prospect of success. At a meeting of the Board of Trade, Mercantile Association, and the business men of Chicago, held on the 25th ult., a regular organization was perfected, Presidents, Vice President and Secretaries were chosen, addresses and reports made, and a final policy adopted of urging the Canadian authorities to enlarge their channels of communication between the Lakes and the Atlantic, in concurrence with the previous action of the Legislature of Illinois in the same direction. Subsequently a committee was appointed consisting of Dr. Brainard, Chas. Walker, Hiram Norton, Col. Foster, W. G. Watson and the Mayor of Chicago, who were instructed to proceed to Quebec where the Colonial Legislature is now in session, and press the proposed measures on the immediate attention of that body.

In connection with this movement has been another, namely the call for a National Convention signed by ninety eight members of Congress, to be held at Chicago in the month of June next, for the purpose of renewing the effort to enlarge the Illinois and Erie Canals as originally proposed, and the N. Y. Chamber of Commerce at its last meeting has accepted the invitation and appointed a committee of twenty five to attend the proposed convention. It is proper to state however that only about a dozen members of the Chamber were then present when the proceeding alluded to took place.

The evidence furnished at the meeting in Chicago on the 25th ult. as to the productive power of the North West, was of the most interesting and important character. It appears that in the eight states of Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa and Missouri, containing 445,311 square miles, and a population of about nine millions, more than the white population of the seceded states, the production is ascertained to be as follows:

Wheat	80,293,603 bushels.
Corn	392,289,631 "
Hogs	11,039,332
Cattle	7,206,810

It is also stated, that this estimate, owing to the fact that the crop of 1860 was a third deficient, and the census returns incomplete, may be safely considered 50 per cent below the actual amount of production during the last year. It was also shown that of these products but a comparatively small portion is shipped by way of New Orleans, as its Custom House returns of 1860 and those of New York conclusively show.

	From New Orleans.	From New York.
Wheat, bu	2,189	1,180,908
Wheat Flour, bbls	80,541	1,487,200
Indian Corn, bu	224,382	1,580,014
Indian Meal, bbls	158	86,073
Pork, bbls	4,250	109,379
Hams and Bacon lbs	890,230	16,161,649
Butter, lbs	96,857	4,725,146
Cheese, lbs	88,491	14,410,717
Lard, lbs	11 055,480	18,562,131
Tallow, lbs	1,909,155	8,634,418
Skins and Furs (dollars)	$350	$1,394,912

These facts therefore demonstrate that with the navigation of the Mississippi unobstructed, the great mass of Western exports would flow through other channels.

The reason of this is, that the detour of the river and gulf lengthens the voyage to a foreign market 3,000 miles, that for half the year the climate is unhealthy and avoided by Northerners, and that the heated waters of the Gulf, which do not lose their temperature until they have coasted North and East for thousands of miles, are injurious to most articles of export. So that it is apparent further outlets North and East are indispensable for the products of the Great West. It was also urged that the employment of the Illinois Canal was a necessity not for the South but the North; that it would not benefit the descending, but the ascending trade of the Mississippi. We notice however that this plan of enlargement was not so much insisted on at the Chicago meeting, as the other, of getting to the sea through the Lakes and the St. Lawrence Canals, the latter to be enlarged for that purpose.

We notice also that the States of New York and Pennsylvania, and their representatives in Congress, were pretty violently assailed for the opposition emanating from them to the enlargement bills.

Now it is our purpose to discuss this question briefly and plainly, and to show that while we approve of the present policy of the merchants and shippers of Chicago, we think they have not done us of New York the justice we deserve.

We admit that freights advanced the last season both on our canals and railways. But this was unquestionably owing to the pressure upon them for transportation beyond their means of conveyance. Years before, there was no such pressure; indeed it was feared our Canal system was a failure and that we should have to abandon it to private direction. But the rise of freights on the Lakes was even still greater, and the owners of vessels at Chicago did not hesitate to take advantage of the circumstance. If the increased freight proved that our Canals were not large enough, it also proved that the Lakes were not large enough.

The people of the State of New York are not in fact prepared at this juncture to go into any serious alteration of the size and character of their canals. After many long years of doubt, and difficulty, with large additional outlays beyond the original estimate of cost, these public works, which have created the Great West, are now beginning

to reimburse the Treasury, though with a large debt yet to be paid off. The present year permits for the first time in many, a reduction in the State taxes, and it is a grateful relief to us, at a time when the National burden is becoming so heavy. We do not care at this moment to incur, under any prospect of advantage in the future, another heavy series of obligations and debts. We require rest as the term is, for all our public works.

But if it were ever so convenient to engage in the enlargement of the Erie Canal, there are serious physical and engineering difficulties in the way. It is very doubtful whether it would be practicable to deepen and embank the canal on its present lines, sufficiently and securely enough to allow the passage of large ships or steamers.

At the Little Falls on the Mohawk, and along the valley of that name down to its union with the Hudson, there are places where no such enlargement could be made.

As it is, according to the opinions of Mr. Hutchinson, an eminent Engineer, long connected with our Canals, there is not even now a constant and adequate supply of water for them on some of the levels, and much less would there be, if enlarged according to the proposed plan. But even if we had the ship canal, it would be found after all a most tedious and expensive way of getting large vessels to the sea. To work a ship or a steamer of a 1000 tons through a canal of about 400 miles in length, would be the poorest use such a vessel could be put to. For that distance, her appropriate rig, machinery, crews, and form would be an actual disadvantage in the economy of expense and time. The passing of bridges, locks, and other vessels, would be a difficult operation in itself, and be full of practical inconvenience. It is found so now upon such short Canals as the Welland, having but few obstacles offered by cross roads, bridges, towns and a dense population.

But practically, ship Canals have been fully tested abroad. The Caledonian, connecting the North Sea and the Atlantic Ocean, was opened in 1824 after twenty years of labor. It shortened the distance 800 to 1000 miles in the voyage from the British Western ports and the Baltic. It permits vessels drawing nearly 20 feet of water; a 32 gun frigate has gone through it; it was a commercial as well as military work. And yet it has proved a complete failure, and it is proposed to abandon it altogether. Nor could the State of New York or the producers of the great West afford to have their present facilities for reaching tide water, cut off, or at least impaired for many years while the work of reconstruction was going on. And suppose this last was accomplished, of what earthly use would this ship Canal be, if we had a foreign war on our hands. It is the part of prudence, discretion, and statesmanship to consider well all these obstacles, and the people of New York, if they had not their own difficulties to deter them have yet a most instructive warning in the history of Illinois herself, which in her haste to push her internal improvements beyond their immediate necessity, broke down most unhappily in the attempt.

On the other hand we fully approve of the purpose of the Chicago people to obtain the co-operation of the Canadians in making a ship channel to the sea. This is a legitimate and laudable effort.

The canals to be enlarged are short, well supplied with water for lockage, and the expense of re-construction will be comparatively small. We are just as much pleased that Chicago should have a foreign market, as that New York should. The advantage will be to the American trade in the one case as much as the other. Our own railways, if we have no foreign war, will henceforward have as much to do as their capacity will permit.

Every new natural outlet should be improved. The lakes were not created for the use of pleasure travellers, but for the benefit of busy men. What the Mediteranean and the Baltic now are, these lakes are destined to be.

But above all, the Chicago policy will closely connect the Canadas with the United States. These provinces have no West of their own. All their railways depend on being fed from our granaries and mills. Build up a direct ocean trade through her canals and ports, and we shall have taken a bond of fate, that our peaceable relations with them and the Mother Country will never again be disturbed.

Central Railroad of New Jersey.

The Directors of the Central Railroad Company of New Jersey present to the stockholders the following report, for the year ending December 31st, 1862. For convenience of comparison many of the statements are made to cover the year 1861, as well as the past year.

SERVICE OF THE ROAD AND FERRY.

The service of the road has been as follows:

	1862.	1861.
Miles run by passenger trains.	201,833	181,446
" " merchandise "	146,136	144,055
" " coal "	309,363	317,573
Total by transportation trains.	657,332	643,074
Miles run by wood trains	3,462	2,705
" " gravel and constr'ction trains	26,410	16,614
Total miles run by trains.	687,204	662,393

The passenger trains have also run 53,584 miles on the New Jersey Railroad, between Jersey City and Elizabeth, drawn by the engines of that company, against 45,890 run last year.

During the year the boats have run 37,032 miles on the ferry, between New York and Elizabethport—6,898 miles in carrying live stock to Fortieth street, and 3,726 miles on excursions, making a service of 47,656 miles. In 1861 they ran 36,888 miles.

PASSENGERS, FREIGHT AND COAL.

A comparison of the passenger business of the year 1862 with the year 1861, gives the following results:

	1862.	1861.
Number of passengers..	419,803	401,638
Miles traveled by " ..	11,759,879	10,801,933
Equal to through " ..	156,798	144,026

A comparison of the merchandise business of the two years, in tons of 2,000 lbs., (excluding iron,) gives the following results:

	1862.	1861.
Number of tons carried..	196,985	162,382
Tons carried one mile...	11,168,060	8,996,279
Equal to through tonnage	148,907	119,950

A comparison of the iron tonnage of the two years, in tons of 2,240 lbs., gives the following results:

	1862.	1861.
Number of tons carried...	70,202	56,690
Tons carried one mile	4,487,108	3,619,220
Equal to through tonnage.	70,111	56,550

A comparison of the coal business of the two years, in tons of 2,240 lbs., gives the following results, the through tonnage being calculated from Easton to Elizabethport:

	1862.	1861.
Number of tons carried.	816,570	823,214
Tons carried one mile ..	43,447,732	42,907,290
Equal to through ton'age	678,871	670,426

There was a decrease in Lackawanna coal of 66,494 tons, but an increase in Lehigh coal of 59,850 tons.

The coal tonnage over the road, since the transportation of coal was commenced, has been as follows:

	Lackawanna. Tons.	Lehigh. Tons.	Total. Tons.
1856	98,670	33,325	131,995
1857	209,950	84,841	294,791
1858	417,276	122,923	540,649
1859	455,681	183,277	638,958
1860	590,863	263,906	854,769
1861	568,869	254,345	823,214
1862	502,375	314,195	816,570
Total...	2,844,134	1,256,812	4,100,946

EQUIPMENT.

The Company own 38 engines, of which 22 burn wood and 16 hard coal. Of these engines, 26 are narrow gauge and 12 broad gauge. Their condition is reported to be as follows: 16 in good order, 19 in fair order, 1 in shop for repairs, 1 wanting general repairs, and one (Union) which exploded October 27th, will be condemned as not worth repairing. One engine (Delaware) was sold to the Government. One new locomotive has been placed on the road during the year, and four more are ordered but not yet delivered. About thirty-five engines are required for the ordinary daily service. Four more engines will be ordered immediately; other purchases may be necessary, as the pressure of business is very great.

The equipment of cars is as follows: 18 first-class passenger cars, 2 second class passenger cars, 7 baggage and mail cars, 75 house freight cars, 20 covered cattle cars, 103 eight-wheel platform cars, 200 eight-wheel coal cars, 70 six-wheel platform cars, 6 caboose cars, 42 four-wheel gravel cars, 16 dirt cars, and 1 wrecking car. There have been sold to the Government 20 platform cars and 2 house freight cars; and there have been purchased or built 7 house freight cars, 70 six-wheel platform cars, and 200 eight-wheel coal cars.

TRANSPORTATION ACCOUNT.

The following is a statement of the ordinary receipts and expenses for the year 1862 compared with 1861:

Receipts:—	1862.	1861.
Passengers	$230,805 41	$222,089 93
Merchandise	481,977 11	382,598 75
Coal	661,280 85	568,275 83
Mail	7,600 00	7,600 00
Express	8,261 61	7,643 71
Rents	1,551 91	1,238 72
Miscellaneous	6,609 73	12,448 66
Total receipts ..	$1,397,586 62	$1,201,895 60
Expenses:—		
Running expenses	$129,839 30	$120,196 95
Wood consumed.....	62,767 63	59,227 46
Coal consumed	50,006 23	43,243 83
Repairs of road.....	126,351 93	128,271 47
" engines....	38,816 51	34,309 60
" passen. cars	11,196 67	12,740 46
" freight "	14,080 97	14,014 37
" docks, Elizabethport...	10,463 13	16,551 23
Repairs b'dings, br'ges,	8,727 66	
" tools, mach'y.	5,378 86	3,547 13
Expense account.	25,521 16	23,961 30
Miscellan's expenses .	10,967 51	12,996 18
Ferry running expens.	44,840 18	37,007 30
Ferry boat repairs ...	11,840 24	6,790 20
Ferry miscell. expens.	11,647 87	9,594 92
Car service.....	60,799 26	.....
Total expenses.....	$623,245 06	$522,452 30
Balance net earnings..	$774,341 56	$679,443 30

The following table shows the receipts, expenses,

and net earnings from the beginning of the annual reports to the Legislature to the present time:

	Receipts.	Expenses.	Net Earnings.
1853.	$349,018	$197,629	$151,389, or 43 p. c.
1854.	378,145	197,349	180,796, or 48 "
1855.	393,729	208,856	184,873, or 47 "
1856.	553,479	258,308	295,171, or 53 "
1857.	682,314	340,502	341,812, or 51 "
1858.	836,934	345,614	491,320, or 58 "
1859.	971,702	385,716	585,986, or 61 "
1860.	1,185,848	475,457	710,391, or 60 "
1861.	1,201,895	522,452	679,443, or 57 "
1862.	1,397,586	623,245	774,341, or 56 "
Total	$7,950,650	$3,555,128	$4,395,522, or 55 p. c.

An increase in receipts is here shown of $195,691 02, but this is partly nominal, as the amount paid for car service, $60,799 26, is now charged among the expenses instead of being deducted from the receipts as heretofore. The real increase is $134,891 76, or 11 per cent. The increase in the regular passenger business has covered the falling off in the Government business, and also shows as $8,215 48, but the legitimate increase was $20,617 92. In merchandise receipts there is a large increase—$99,378 36; deducting car service, it leaves $79,975 34, or 28 per cent. distributed through every department, owing to the progressive development of the various roads leading to this avenue. The increase in coal receipts shows as $93,005 02, and is, after deducting car service, $52,549 81, or 9 per cent. This is owing entirely to the advanced rates, as the tonnage has actually fallen off.

The expenses show an increase (omitting car service) of $39,993 50, or 7 per cent. There has been an increase in running expenses of $9,642 85; in fuel consumed of $10,302 57; in repairs of equipment of 3,029 82; in other repairs of $4,471 29, and in ferry accounts of $14,985 82. There has been a decrease in repairs of road of $1,919 54, and in general expenses of $468 81.

The gross receipts per mile run have been as follows: from passenger trains, $1.26; from merchandise trains, $3.29; from coal trains, $2.14. The average receipts per mile run from all trains has been $2.12 against $1.87 last year.

DIVISION OF WORKING EXPENSES.

The following table, prepared by the Superintendent, is made up on the same principles as the one submitted last year:

	Passengers.	Freight.	Coal.
Running expenses	$31,226 87	$54,312 03	$44,300 90
Wood consumed on trains	16,995 69	27,452 71	18,819 23
Coal " "	1,315 44	1,922 60	26,827 92
" " on ferry	8,970 18	8,970 14	
Repairs of road	666 66	666 66	666 68
" " stations and shops	25,677 80	26,973 85	73,700 28
" engines	7,592 12	9,351 91	21,872 48
" passenger cars	11,196 67	13,951 33	
" freight cars			129 64
" coal cars	2,909 22	2,909 22	2,909 22
" buildings, bridges, etc	591 07	2,941 86	6,930 20
" docks at Elizabethport	1,241 03	2,068 91	2,068 92
Expense account	8,507 05	8,507 05	8,507 06
Miscellaneous expenses	3,655 83	3,655 84	3,655 84
Ferry running expenses	10,415 23	8,424 90	
Ferry boat repairs	5,920 12	5,920 12	
Ferry miscellaneous expenses	3,160 45	8,487 42	
Car services	941 03	19,403 02	40,455 21
Total expenses	$140,981 91	$231,919 57	$250,343 58

By this statement it would appear that the cost of operating the passenger trains has been 61 per cent. of the gross receipts, of merchandise trains 48 per cent., and of coal trains 38 per cent.; the average cost of all the trains being 44 per cent.

FINANCIAL CONDITION.

The following is a statement of the financial operations during the year:

	Cr.	
Gross earnings, as per statement	$1,397,586	62
Boats sold, $41,000; less boat bought, $10,250	30,750	00
Accounts payable, increase*	300,008	13
Total	$1,728,344	75

	Dr.	
Ordinary expenses, as per statement	$623,245	06
Grading, filling up at High Bridge, etc.	47,399	99
Masonry	57,521	93
Railway superstructure	49,487	02
Land damage	5,343	45
Engineering	1,122	00
Expenditures at Elizabethport	10,584	12
Land purchases for extension	250,182	04
Bergen Point wharf	5,654	01
Docks in New York	6,000	00
Engines, difference between purchases and sales	1,098	30
Coal cars, 200 eight-wheeled	99,864	39
Cars built in shops or purchased	10,677	55
Tools and machinery, increase	550	00
Burnetizing machine	9,800	00
Stone breaker	7,200	00
Miscellaneous property, increase	864	54
Sundry ac'nts, materials, etc., increase	3,452	20
Quarterly dividends for year, 10 per cent	363,000	00
Interest account for year	142,511	96
State taxes for 1862, ½ per cent. on $4,904,668	24,523	34
United States taxes	8,262	85
Total	$1,728,344	75

*This includes $217,331 20 to the credit of South Branch Railroad Company for amount paid in by subscribers not yet expended.

The profit and loss account has been credited with the gross earnings	$1,337,586	62
It has been debited as follows:		
Ordinary expenses	$623,245 06	
Interest account	142,511 96	
Taxes to State	24,523 34	
United States taxes	8,262 85	
Dividends, 10 per cent	363,000 00	
	1,161,543	21
Balance, equal to 6½ per cent. stock, transferred to Renewal Fund	236,043	41
Add balance to credit of fund last year	172,855	39
Total	$408,898	80

The Renewal Fund has been debited as follows:

Depreciation in engines	$9,598	30
Depreciation in ferry boats	5,250	00
Expenditures of year on construction balanced by an equal amount withdrawn from cost of railroad, namely: Balance of discount on Second Mortgage Bonds	$157,494 88	
Miscellaneous expenses	3,379 51	
	160,874	39
Balance to credit of Renewal fund	238,176	11
	$408,898	80

In pursuance of the policy acted on for the last two years, the balance of the discount on the second mortgage bonds charged heretofore as a temporary part of the cost of the railroad, and also a part of the miscellaneous construction expenses, have thus been withdrawn from construction, and replaced by the expenditure of that sum on the road, principally in masonry and filling up at High Bridge, leaving the cost of road the same as before.

CONSTRUCTION.

At the High Bridge over the south branch of the Raritan River, the double-arch culvert for the stream and public road has been completed, at a total cost of $72,253 50. The filling in of the present bridge is advancing rapidly, there having been paid for embankment, up to the present time, $71,842; making a cost, so far, for this valuable improvement, of $144,095 50. The whole work, including the reduction of grade east of the bridge, will be completed during the summer.

At the bridge over the Musconetcong at Bloomsbury nothing has yet been done, but the arch culvert over the stream and the filling in of the bridge have both been contracted out. At the bridge over the Hopatcong at Springtown, the arch culvert and filling in are contracted out, and the masonry well advanced, there having been paid on masonry estimates, so far, $10,190. The culvert will be completed during the coming season, and considerable filling done. Sidney Dillon, the contractor at the High Bridge, is also contractor for these two, and at the same prices.

A plan for a stone viaduct, in place of the Green's Mill Bridge over the Lopatcong River and Morris Canal, has been prepared, approved, and the work let to the same party.

The graduation for the extension of the second track from Hampton Junction to Bloomsbury, eight miles, has been commenced and completed during the year, at an expense of $13,340 88 for grading, and $2,536 37 for masonry. The track is laid and in use from Hampton to Asbury, and nearly ready on the rest of the distance from Asbury to Bloomsbury.

Between Bloomsbury and Phillipsburgh, the terminus of the road, the grading and filling for the second track is in progress wherever practicable, and considerable work done; but the heaviest points can not be vigorously attacked till the masonry of the other river bridges is so far advanced as to allow the surplus material to be deposited in the bank. There has been expended on grading $9,014, and in extending culverts, etc., $1,343 86. It is expected to push the work as rapidly as possible.

EXTENSION TO JERSEY CITY.

During the past year active preparations have been making for extending the road from the curve in the track east of Elizabeth, where it turns down towards Elizabethport, across Newark Bay to Bergen Point, and from thence northeast to Jersey City. The location across the Bay has been filed, and the bridge put under contract, the construction commenced, and good progress made. To get the best possible line, it was necessary to apply to the Legislature of New Jersey, at their present session, for a supplement repealing a restriction on the line the company were authorized to construct. As this has now been obtained, the location of the remainder will at once be filed, and the work put under contract. The right of way has been principally secured, and extensive purchases of lands and water rights made that will give the company facilities for a most unbounded business of any and all descriptions.

SOUTH BRANCH RAILROAD.

A year since a charter was granted by the Legislature to the South Branch Railroad Company to build a branch from the Central Railroad at Somerville to Flemington. At Flemington it connects with the railroad to Lambertville on the Delaware. At Lambertville the Belvidere Delaware Railroad makes a southern connection to Trenton and Philadelphia, and a northern route to Easton and Belvidere. This branch to Flemington has always been a part of the programme of the originators and builders of the Central road, and viewed as an exception to their general dislike to branches owned by the main stem. As a protection to their local business, and also to their through business, if threatened with competition at or near the point in question, they deemed it wise to have the road built. The Company having been organized, the road was surveyed by James Moore, a location agreed on after running many lines, satisfactory proposals for its construction

received, and the road put under contract. By an agreement to lease the completed road at six per cent., (a printed copy of which was sent to every stockholder,) a subscription of $300,000 to the stock of that Company was promptly obtained from the inhabitants, and from the stockholders of the Central. The Central Company itself does not now hold a share of South Branch stock. It is expected that the road will be completed during the summer; and while the Board have no very large ideas of the business to be immediately brought in, they think it will be no burden on the Company, but will prove self-sustaining as well as fulfil the purpose for which it was built.

FUEL.

A short report on fuel, by the new Superintendent, is appended. The price of coal is so high, being $4 now against $1.85 last year, that calculations are much deranged, and the relative economy of coal very much reduced for the time being. As to bituminous coal, the war has cut off this supply for the past two years, and none of the engines have been run with it.

TRANSPORTATION FOR GOVERNMENT.

The transportation of regiments and Government freight during the year has been small, amounting to only $21,517 90 against $53,722 84 the previous year; the travel and traffic having principally returned to the natural southern route *via* Philadelphia, in consequence of the improvements made in the route. For the improvements made, and to be made, the Government and the public may, in a measure at least, thank the "circumbendibus route" by Allentown and Harrisburgh.

CONNECTING ROADS.

Several new connections are under way, notwithstanding the times. The South Branch road has already been referred to. From the Lehigh Valley road, at Lizard Creek, an important road is building rapidly, intended to bring Schuylkill coal across from Schuylkill Haven to the Lehigh Valley, and so down to Elizabthport, the operators in that coal field feeling sensibly the want of a direct outlet to New York Bay.

The Penn Haven and White Haven Railroad is also constructing as an extension of the Lehigh Valley Railroad along the Upper Lehigh, completing the line of roads into the Wyoming Valley at Wilkesbarre. A large addition of coal tonnage is looked for by them from this enterprise.

To give an idea of the rapid growth of business from the Lehigh Valley and its connections, the following comparative table is added.

Lehigh Connection:	
Passengers	$72,404 30
Merchandise	228,589 81
Coal	366,108 50
Total	$667,102 61
Delaware, Lackawanna and Western Railroad Connection:	
Passengers	$18,370 96
Merchandise	94,616 40
Coal	295,172 35
Total	$408,159 71
Local business:	
Passengers	$139,530 15
Merchandise	158,770 90
Other sources	24,023 25
Total	$322,324 80

The business derived from Lehigh Valley connection is thus shown to be 46 per cent. of the whole business; from the D. L. and W. connection 28 per cent., and the local business 26 per cent.

INCREASE OF CAPITAL STOCK.

To build the extension to Jersey City, provide extensive docks and facilities for business, complete the double track and add largely to the equipment of engines and cars, including the company's proportion of cars for the Lehigh coal trade, will require a large outlay. To meet this, it is proposed to apply to the stockholders soon for authority to increase the capital to $5,000,000. It is reported as $3,630,000. There has been an addition to this of $120,000, by a sale in the early part of December of 1200 shares of stock at 150 per cent., without participation in the January dividend, which will appear in the current year's accounts, thus raising the stock to $3,750,000. It is proposed to apply for authority to allot the remaining $1,250,000 among the stockholders in the proportion of one share of new stock for every three now held, calling in an installment of 10 per cent. at the time; the remainder to be called in installments of 10 per cent. from time to time, as the work progresses.

BALANCE SHEET, January 1, 1863.

Construction—same as last Report		$4,480,896 79
Station houses, shops, and water stations		132,000 00
Land and work at Elizabethport		302,355 32
Land and right of way for extension		299,327 81
Ferry interest and boats		217,050 00
Engines		320,000 00
Passenger and baggage cars		49,000 00
Freight cars		137,677 55
Coal cars		99,864 39
Telegraph, docks, machinery, miscellaneous property, etc.		76,182 59
Chairs, spikes, iron rails, and ties on hand		32,900 00
Workshop, materials on hand		12,652 20
Fuel on hand		34,000 00
Cash and accounts receivable		128,286 26
		$6,822,192 91
Capital stock		$3,630,000 00
First mortgage bonds, due 1865	$500,000	
1870	900,000	
		1,400,000 00
Second mort., bonds, due 1875		600,000 00
Dividend 2½ per cent., payable in January		90,750 00
Interest on bonds, accrued not yet due		47,833 33
Accounts payable		320,433 47
Renewal fund, balance to credit		233,176 11
		$6,822,192 91

President—JOHN TAYLOR JOHNSTON.

Directors—John Taylor Johnston, John C. Green, William E. Dodge, Adam Norrie, Benjamin Williamson, F. T. Frelinghuysen, Henry D. Maxwell, Asa Packer.

Secretary and Treasurer—SAMUEL KNOX.

Engineer—JAMES MOORE.

Superintendent—JOSIAH O. STEARNS.

Abandonment of Railroads.—Rights of the Community.

A COMPANY HAVING COMPLETED ITS ROAD FORFEITS ITS FRANCHISES BY CEASING TO OPERATE A PART OF ITS ROUTE. THE REMEDY, HOWEVER, IS NOT BY AN ACTION IN EQUITY, BUT BY A PROCEEDING ON THE PART OF THE STATE TO ANNUL THE CORPORATION.

A corporation, under the name of the Albany Northern Railroad Company, was formed in 1851, pursuant to the provisions of the general railroad act of the State of New York, for the purpose of constructing, maintaining and operating a railroad between the City of Albany and Eagle Bridge, in the county of Rensselaer. The road was constructed and put in operation in 1853, and continued to be run until September 1859. The company in 1852, had given a mortgage upon all its property and franchises, which was foreclosed and the mortgaged property sold on the 15th September, 1859. The purchaser at such sale, and his associates, on the 6th October, 1859, organized a new corporation, under the name of the Albany and Vermont Railroad Company (the defendant,) for the purpose of maintaining and operating the purchased road; and in the articles of association it was stated that the road of the new company was that "originally owned, constructed, maintained and operated by the Albany Northern Railroad Company, running from the City of Albany to Eagle Bridge, in the county of Rensselaer, from and to which places the same is to be maintained and operated." For fifteen days after its organization the defendant operated its railroad from Albany to Eagle Bridge, and then wholly ceased to operate that part of the same lying between Waterford Junction and Eagle Bridge, (about twenty-one miles of the entire route,) but has continued to operate the part between Albany and Waterford Junction. In September 1860, with a view of wholly abandoning the operation of that part of its road, the defendant took up and removed all the iron rail thereon between Waterford and Eagle Bridge, and between those points so dismantled the structure as to render it wholly unfit for use and travel for railroad purposes. The defendant being engaged in removing with a view to abandonment, the iron track and fixtures used in the operation of its road east of Waterford Junction, this action was commenced by the Attorney General. The complaint prayed that an injunction might be granted, restraining the selling, taking up or removing the iron track and fixtures of said road, and demanded as relief, that the defendant be required to reopen and operate for public use, that part of its road from Waterford Junction to Eagle Bridge, and specially perform all the duties and obligations resting by law upon it as a railroad corporation.

The trial was before a referee who dismissed the complaint. Upon appeal, judgment was affirmed by a general term of the Supreme Court, and the plaintiff then appealed to the Court of Appeals. The following is a part of the opinion rendered at the decision of the case:

WRIGHT, J.—The present question is, whether a railroad corporation formed under the general act, for constructing, maintaining and operating a railroad upon a definite route and between places specified in its articles of association, may be compelled by a court of equity, in an action brought by the State, after it has constructed its road to continue to maintain and operate it. Of course it is not pretended that such an action can be maintained, or the power exercised by the courts, unless the obligation, or duty, is imposed by law on the corporation to maintain and operate its road for the public use and benefit. The inquiry primarily suggested is, whether there be any express legal obligation or duty, or any to be necessarily implied, resting on a railroad corporation to maintain and operate its road for the public use, irrespective of its own interests. If any such obligation or duty is imposed, it is by the general law under which the corporation is created, or to be implied from its provisions, or those of the charter of the company. The railroad act does not, in terms, require a company organized under it to construct, maintain or operate the railway mentioned in its articles of association. The act is permissive and not mandatory. The associates are endowed with corporate existence, and as a corporation, vested with powers to construct and operate a railroad for the conveyance of persons and property between established points, and in this sense to exercise a public employment. The associates, by the act of acquiring corporate

existence do not absolutely agree with the State that, in consideration of such corporate existence, and the franchise with which they are invested, that they will construct the railroad mentioned in the charter, and continue to operate it during their corporate existence; no contract obligation is thereby created on the part of the corporation. This is apparent from the act itself. The corporation is first brought into existence, and powers conferred on it for the execution of a special purpose, viz: to construct, maintain, and operate a railroad for the conveyance of persons and property. There is no absolute requirement, or obligation assumed by the corporation created under the act to execute the purpose. Indeed the law itself contemplates that there may be an omission or neglect to carry out the object of the association and a non-user of the corporate privileges. Unless the corporation begins to construct its road and expend ten per cent of its capital in such construction, within two years after its articles of association are filed, or finish the road and put it in operation in five years from the time of filing such articles its corporate existence and powers are to cease. The penalty for non-user of the corporate rights and privileges for five years, is a forfeiture of such rights and privileges. It is optional with the corporation whether it will exercise the powers bestowed or undertake the work; and being so, the grant and acceptance of the railroad franchise cannot properly be construed as a contract between the State and corporation, binding the latter to construct and maintain the railroad for the public benefit. It is only from the charter and its acceptance that any contract relative between the State and the corporation can arise; and such contract must be operative if at all, the moment the charter is accepted. The provisions of the railroad act negative the idea that any contract relation between the State and the corporation formed under it springs out of the grant and acceptance of the franchise. There is therefore, no contract obligation resting on a corporation, brought into existence by the railroad act, in favor of the State or interested citizen, to construct, maintain and operate for the public convenience and use, the road named in its articles of association. * * * * * *

I am of opinion, that a railroad corporation organized under the general act, cannot be compelled at the suit of the Attorney General to reopen and operate a road that it has abandoned, and that if such corporation chooses to abandon its works, and no longer assert the corporate rights and privileges conferred on it by its charter, the remedy of the State is not by action for specific performance. The only remedy where there has been a total abandonment, and a non-user of the corporate powers, is an action by the people to vacate the charter or annul the existence of the corporation, and a like remedy is applicable when the corporation shall abandon part of its road and continue to operate the remainder under its coporate franchise. A company endowed with a franchise or privilege, to maintain and operate a railroad on a fixed route, and between places named in its charter, cannot exercise the franchise or privilege in the operation of a road upon another route, and between other places. The franchise can only be legally exercised by the corporation operating its entire road. There is no privilege granted or right obtained to operate a part thereof, and if it should undertake to do so, it is exercising a franchise or privilege, without legal sanction. An action is authorized by statute to be brought by the Attorney General, in the name of the people of the State, on leave granted by the Supreme Court, or a judge thereof, to vacate the charter or annul the existence of a corporation, whenever such corporation shall exercise a franchise or privilege not conferred upon it by law.

In the present case the defendant being endowed with the franchise or privilege of maintaining and operating a railroad between Albany and Eagle Bridge, has voluntarily abandoned the maintenance and operation of so much of its road as lies between the Waterford Junction and Eagle Bridge, whilst it is continuing to exercise its franchise and corporate rights and privileges in operating a railroad between Albany and Waterford Junction. The State cannot compel the corporation to re-open and operate the abandoned road. It cannot insist that the company shall exercise the rights and privileges conferred on it. If the company chooses not to use them, there is no power to compel their use. But the defendant, under a franchise or privilege granted to it to maintain and operate a railroad between Albany and Eagle Bridge, cannot legally operate one between Albany and Waterford Junction. It is the exercise of a privilege not conferred on it by law. Its charter may be vacated, or its corporate existence annulled; but because it is doing something not legally sanctioned, is no ground for constraining it to do what neither any contract obligation nor the law requires of it.

I think the complaint in this case was properly dismissed at the Special Term. The people cannot maintain an action to compel a railroad company to operate its road for the use of the public after it shall have abandoned it for reasons peculiar to itself. Whilst the corporation exercise the franchise, it must do it under the limitations and restrictions imposed by its charter or by law. It may omit to use its franchise or privilege, or abuse its powers, or exercise privileges not conferred on it by law, and thereby forfeit its charter or its corporate existence be annuled. Any remedy the public may have for a breach or neglect of duty imposed by the railroad act, must be by *mandamus*, *quo warranto* or indictment; and the performance of such duty cannot be specifically enforced in equity at the suit of the Attorney General. The judgment of the Supreme Court should be affirmed.

All of the eight judges except two who did not sit in the case, concurred in this conclusion. Judges Denio, Sutherland, Allen and Smith, however, were of opinion that a corporation is under a legal obligation to exercise its franchises, and that it has not the option to discontinue a part of its road and forfeit its franchises. They agreed that the remedy is not by action in equity for a specific performance, but by *mandamus* or indictment, or at the election of the people, by proceeding to annul the existence of the corporation.

Judgment affirmed.

☞ We understand our railway lines have done a very handsome business during the past year; and that the returns, when published, will probably show a credit to the province, over and above all working expenses of upwards of $30,000.—*Halifax Sun.*

Dubuque and Sioux City Railroad.

The gross earnings of this road for the year ending December 31, 1862, were $228,559 63; the expenses actually paid for operating the road during the same time were $105,628 12—leaving a net profit of $122,931 41. The receipts of the company from all sources during the year were a follows:

From freight and passengers	$224,802 17
" rents and mails	3,757 36
" freight bills and individual accounts of previous year	14,617 87
" circulation	17,000 00
	$260,177 40

Disbursed as follows, viz:

Expenses of operation	$105,628 12
Interest on floating debt and taxes	13,537 96
Company expenses, including salaries	9,800 72
Material and supplies, on hand	8,874 50
Construction	25,559 74
Equipment	15,643 14
Decrease of bills payable	21,945 14
" judgment liens	30,979 85
Right of way judgments	3,774 32
Coupons 1st and 2d mort. bonds, and other cash obligations to D. and P. Railroad Company	6,042 30
Cash on hand in treasury	16,111 29
" subject to draft in New York	2,280 32
	$260,177 40

To the gross earnings of the year should be added $1,250, for one quarter's mail service, received too late to enter into the treasurer's statement.

Great effort has been made during the past year to retire all of the "Dubuque and Pacific obligations"; but there are still outstanding—

Of sold bonds and coupons	$103,513 00
Of bills payable	41,732 10
	$145,245 10

—of the latter, under the decree of foreclosure, about half are payable in preferred, and the balance in common stock of this company; and when these bonds and coupons are converted into preferred stock, and the bills payable settled with preferred and common stock, the only remaining portion of the "obligations" will be the 1st and 2d mortgage bonds, for which no provision was made in the decree, and which must be paid in cash. They are secured upon the first thirty miles of the road only, and amount, with interest, to $28,000. There are, however, $63,190 of construction bonds outstanding, but pledged as collateral for an indebtedness of $27,845 45 of the D. & P. R. R. Co., assumed by this company, and included in the statement of its floating debt. The floating consists of—

Bills payable	$75,361 40
Lien of indebtedness	104,239 62
Edward Stimson, trustee, exclusive of interest	43,000 00
	$222,601 02

—of the bills payable, $27,845 45 are overdue and secured by $63,190 of the construction bonds and coupons of the old company: when converted into the preferred stock of this company, and sold, the proceeds will more than pay the indebtedness for which they were pledged; $12,606 44 are secured by a mortgage upon valuable property at South Dubuque, but are not due until October 1, 1876, and meantime draw seven per cent interest payable semi-annually. There are due upon judgment liens—

For iron	$87,425 57
" grading	5,841 52
" cars and engines	10,972 53
Total	$104,239 62

The amount credited to Edward Stimson, trustee, is for money advanced towards the construction of the last 20 miles, and is secured by a deed of 21,740 96 acres of the best Des Moines river lands, as well as by a pledge of the net earnings of said 20 miles. It is proposed to apply the entire net earnings of the present year towards paying off this floating debt, unless some other plan should be devised for its retirement.

The company own about 80,000 acres of the finest land in Iowa, entirely unincumbered after its floating debt is paid, and the title to which is perfect. Besides being the best of agricultural lands, well timbered and watered, they are very valuable as mineral lands, abounding in coal and gypsum, and if held until the road reaches Fort Dodge, and then sold judiciously, would yield a large sum of money, enough to pay the present debt twice over, beyond all reasonable doubt.

An effort is being made to secure the consent of three-fourths of the preferred stock to mortgage the first division of the road for a sufficient sum to pay of the small debt at once. If this is done, a dividend can be paid from the net earnings of the present year, and the market value of the stock will approach at once somewhere near its real value.

An earnest effort is also being made to extend the road at once to Fort Dodge, which from the magnitude of the various interests to be benefitted thereby, ought not to fail; it would enable the holders of some 500,000 acres of land, derived through this road, to dispose of it at remunerative rates. Until the road is built, the lands cannot be sold at any price, while the taxes cannot be evaded.

The General Balance Sheet of the Company January 1, 1863, is as follows:

D. & P. R. R. Co. obligations	$2,809,308 58
Construction	265,178 37
Engineering	3,588 75
Right of way	10,523 87
Equipment	63,196 46
Uncollected freights	9,171 40
Cash	18,865 20

The office of the company is at Dubuque, Iowa. The officers are:

President—EDWARD STIMSON.
Superintendent—GEORGE YOUNG.
Secretary—JAMES M. MCKINLAY.

Philadelphia Locomotives.

We perceive the enterprising house of BALDWIN & Co., of Philadelphia, have just shipped from their works, three first class locomotives of their own plans and construction, to Rio to be used on the Brazilian Railway known as the "Don Pedro II." This work already partly constructed, is to be extended into the interior, and has become a valuable and popular work.

Currency and Prices.

(Continued from p. 233.)

From the following table we have these results:—of the 57 leading articles given, the prices *decreased* between 1855 and 1860 upon 32—upon 8 of them at rates above 40 per cent.,upon 10 above 25 per cent., upon 8 above 12 per cent., upon 6 from 3 to 10 per cent., and 4 remained unchanged. While of 21 articles whose prices increased, only 1 above 40 per cent., 5 above 25 per cent., 10 above 12 per cent., and 5 from 3 to 10 per cent. The details till more strikingly show the independence of prices upon the quantity of money in circulation.

Prices of 57 leading articles in the New York Market on the 1st May in the year 1855 and 1860, Respectively, with the rate per cent of increase and decrease.

So far as the quantity of money is an element of prices, it seems to be the least influential, and it cannot be one of those causes to which great fluctuations of prices are ever due. Credit and confidence are much more efficient. Competition of purchasers is the great cause. Besides prices generally begin their rise in the wholesale trade, and this is on credit. The effect of increased circulation is rather to support than to increase prices.

Up to this stage of the rebellion the United States Government has been making a national debt of all its extraordinary expenditure, but has now directed the levy of an adequate supply from the resources of the country for the payment of interest and abatement of the growing debt, while the cause continues, and its rapid reduction when it ceases. This policy properly pursued cannot fail to keep the debt at a reasonable figure, and endurable amount, without oppresing the people, while it will preserve the public credit and insure the national solvency against all possible hazards.—*Hallett's Financial Circular.*

Railroad Earnings--Weekly.

The earnings of the Grand Trunk Railway for the week ending Feb. 28, 1863, were:

Passengers	$19,708 45
Freight and live stock	66,706 68
Mails and sundries	3,800 00
Total	$90,215 13
Corresponding week, 1862	51,159 75
Increase	$39,055 38

The traffic of the Great Western Railroad for the week ending Feb. 27, 1863, was as follows:

Passengers	$16,714 57
Freight and live stock	53,356 53
Mails and sundries	1,305 07
Total	$71,376 17
Corresponding week of 1862	47,705 54
Increase	$23,670 63

The earnings of the Chicago and Alton Railroad for the 4th week of Feb., 1863, were:

Passengers	$8,961 66
Freight	10,625 10
Sundries	1,053 33
	$20,640 09
Same week last year	15,072 03
Increase	$5,568 06

The earnings of the Cleveland and Toledo Railroad for the 4th week of February, 1863, were

	$41,108 00
Same week, 1862	19,889 00
Increase	$21,219 00

The earnings of the Galena and Chicago Union Railroad for the 4th week of February, 1863, were:

Freight	$23,747 50
Passengers	7,563 54
Mails	1,100 00
	$32,411 04
Same week, 1862	26,984 25
Increase	$5,426 79

The earnings of the St. Louis, Alton and Terre Haute Railroad for the first three weeks in Feb'y have been as follows:

	1st week.	2d week.	3d week.
1863	$23,843 02	$23,699 05	$24,756 81
1862	14,823 10	17,396 15	15,900 00
Increase	$9,019 92	$6,302 90	$8,856 81

American Gold—Government Securities—Railroad Stocks.

1860	639,894,311	248,408,290	888,302,601	385.65	39½ "	3,503,713

The valuation of property on the grand duplicate of 1861, upon which the taxes collected during the fiscal year 1862 were levied was as follows:

Valuation of lands (25,321,275 acres)	$[illegible],064,689
" of town and city lots	149,818,913
Total valuation of real estate	$643,883,552
Valuation of personal property	248,966,532
Total valuation of real estate and personal property	$892,850,084

The taxes levied upon this valuation for State purposes for the service of the year ending 15th November, 1862, were as follows:

For General Revenue Fund—14 cts. per $100	$1,247,699 93
For Sinking Fund—14 cents per $100	1,247,699 94
For State Common School Fund—3½ cents per $100	811,924 98
	$4,056,379 28

The taxes levied by the authorities of counties were as follows:

For County purposes	$1,326,140 48	For Building purposes	$261,087 30
For Bridge "	324,490 49	For Road "	430,253 85
For Poor "	342,225 10	For Railr'd *do.* and debts	538,175 85

—making a total of $3,222,373 02. Other local taxes were as follows:

For township expenses	$323,286 58	For other special purposes	$535,028 45
For special school & sch'lh'se	1,373,862 68	For city, town & boro' purposes	1,560,197 83

—making a total of $3,792,375 59.

Total taxes levied for State, county and special purposes	$11,071,127 89
To which add delinquencies and forfeitures	585,686 03
Total taxes for all purposes	$11,656,813 92

OHIO STATE DEBT.

The following is a statement of the issues and redemption of the State debt:

	Amount issued.	Cancelled and redeemed.	Outstand'g Nov. 15, 1862.
Issued prior to 1st January, 1845	$17,395,482 50	$15,118,347 65	$2,277,134 85
" to redeem loan of 1850	4,141,448 43	10,000 00	4,131,448 43
" " " " 1856	2,400,000 00	.....	2,400,000 00

American Railroad Journal.

Saturday, March 14, 1863.

Stock Exchange and Money Market.

The revulsion in the gold market of last week produced a sensation not often witnessed even in this excitable city. The effect of the legislation in Congress was to reduce the traffic in the precious metals to a reality. It placed these commodities on the same footing, that it had previously established for checks, notes of hand and bills of exchange. It did not, and can not affect the legitimate sale or transfer of the articles, but it made fictitious and fraudulent operations expensive. If a party has gold to sell, he may sell it within three days without any difficulty. If he has only a paper evidence from some bank or some broker, that there has been lodged a certain amount of gold, he shall not be permitted to operate upon it to an unlimited extent, without paying a tax for it. This is all there is about it.

Some of our cotemporaries who are specially sensitive whenever the liberty to do mischief is checked by legislation, are so far right, when they say that its interference in the business of *money* never produces any effect upon it. This is true beyond all question, and is a well settled principle. But it is quite another thing when the business itself is on a fictitious basis, when by combination, or any other cause, pieces of paper are put forth as gold, and made the basis of false contracts, and the means of deception by which the public suffer. There is no restriction on the bona fide sale of gold; those who want it may buy it, and those who have it may sell it as freely as

ever. But those who want it not and have it not, must pay for the false credit on which they are making their money. There is no wrong done to good morals, or commercial usage or public justice, in compelling these who travel on the high way of speculation, to pay a small toll for their privileges. It is said that ingenious attempts are being made to circumvent the law of Congress by dealing in foreign bills of exchange in lieu of gold. In this case, the stamp duty will still apply, but if these new bills of exchange are not intended to be used, are mere fictions, and will never be presented for acceptance or payment, there is no doubt that on the principle we have already enunciated, those bills will be fraudulent in inception and in transfer, and can be reached by our own State legislation. It is really a great pity that so much cleverness is exerted for such unworthy purposes. Half the ingenuity expended in evasions of the law, if applied to wholesome and patriotic pursuits, would lead to more stable success and quieter consciences, than usually follow according to all experience, the mushroom successes of a day. Still as mankind insist on repeating the follies and mistakes of those who have gone before, all we can do is to point out as we move along with the crowd, the tricks of speculation, and the miseries which always follow the inordinate pursuit of immediate wealth. They that make haste to be rich shall scarcely be innocent. When in the pursuit, a cause or a country is endangered, it is not innocence in any sense, it is a crime. If the holders of this one article of gold are strong enough to control it against the holders of all other property, and these are compelled to purchase, we repeat our former opinions, that the price may still be enhanced beyond the present reduced quotations.

But the movements of gold are not the whole of a Nation's power. In the words of an eminent political economist we repeat the truism, "that gold and silver form only *a very small* portion of the wealth of every civilized country and that it is in no respect necessary to take any extraordinary measures to force their importation or to retain them at home after they have been imported." We undertake to say also that if the exports of gold from the United States to England, have been the result of any other than natural causes, if there has been a drain from timidity, or design, or a mischievous purpose, the drain has been effected at a very serious loss to those who have been engaged in the operation.

The public mind is now inquiring what will be the next movements of Mr. Chase. Of one thing we are assured: the Treasury has at its command all the gold it requires for any possible purpose, and has had to pay no premium for it, thus showing that the credit and means of the Government rank much higher than those of our wealthiest capitalists. Its stocks and certificates are in good demand, the latter more than ever in favor. We think the Union financial power in no way impaired, nor likely to be. When the people refuse to sell for Government notes at par, we shall take alarm but not before.

Every day furnishes further evidence of the ability of the Northern States to respond to all the National engagements, and our faith is unshaken in the belief that the war is nearer a close than many persons imagine. The antagonists who lack money, men, provisions and clothes, who are cut off from the outer world, and even from themselves, cannot in the nature of things hold out forever, however brave and determined, or convinced they may be that they are right. Experience, history and reason tell us this. The logic of events is inexorable.

Our railways stand firm as rocks amidst all this uproar. The great lines are doing an enormous business, the weak lines are getting stronger, and so general is the confidence in works of internal improvement that schemes of the largest import are put before the public without hesitation or fear that they are too large to be undertaken. The people of Chicago continue to press their project of enlarging the western canals, and the people of Ohio intimate they would like ship navigation in lieu of their own river facilities, and still later is the proposition to construct a ship canal [from Prairie du Chien on the Mississippi, through the State of Wisconsin to Milwaukie and from Grand Haven opposite, across the State of Michigan to some point between Detroit and Toledo, thus saving a transit by the usual lake route of about 1000 miles!

The enormous amount of business daily transacted in our chief commercial marts, and by similitude throughout the country may be judged from the transactions of the New York Clearing House. Within a week past, daily balances of more than fifty millions of dollars, that is to say payments of fifty millions of indebtedness in one shape or other, have been made and cancelled by the actual use of but two and a half millions of dollars. Such are the curious operations of trade and commerce. Suppose according to the extreme views of some people, all these transactions to be sound and substantial, such ought to have been settled between debtor and creditor in gold. There would not have been enough at any price obtainable for such a purpose, and a universal crash would have ensued. But the world moves on and so it will move on by the force of natural laws, and to apply the illustration to a material point, we may say that when we make up our National balance sheet we shall find but a very small quantity of gold will be wanting either by the Government or the people.

It is stated on good authority that one of our merchant princes has recently swept the butter market in New England, for the purpose of shipment abroad. As butter rules there at very fair and steady prices, and the operator is one of the shrewdest in our market, he has no doubt found out that it is easier to pay for his enormous importations by the direct export of produce, than to buy bills at 171. The Exchange houses if they were treated in a similar way by their heavy customers, would have to quit the gold market and leave it to tremble till it fell to its honest level.

It is very evident that the necessity of gold for export is diminishing constantly. Our imports at this port for the month of February last have been ascertained to be $12,037,846, and our exports for the same month *exclusive* of specie $18,-484. In fact they were 50 per cent greater than the imports. We also sent abroad during the month $3,965,664 in gold. The important fact is also established that the balance of trade for the last eight months, using that phrase in its ordinary acceptation, has been largely in our favor, and if there is any truth in the theories which are constantly used against us by our malcontents, gold at this moment from natural causes should now be recrossing the Atlantic.

E. T. Satterthwaite's last circular states that considerable purchases have been made in England of United States 5's 1874 chiefly for continental account, and considerable attention is beginning to be paid to good American securities.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Have Prices Generally Advanced with the Issue of Treasury Notes.

We have on several occasions adverted to the singular circumstance, that our paper currency, which is thought by many to be largely inflated, has not produced a general and corresponding inflation of prices; that is to say, in articles of prime necessity and domestic origin. In proof of this assertion, we copy the following statement from a well informed cotemporary.

The war and the inflation of the currency does not seem to have enhanced the prices of some of the great staples of the West. Before the war the price of a mule in Illinois was one hundred and twenty-five dollars in gold. At present, notwith-

standing the great demand for the animal in our army, the price is only sixty dollars in depreciated currency. The same is true of other agricultural products. A late number of a Minnesota journal quotes prices there as follows: Flour, four dollars per barrel; corn, forty-five cents per bushel; dressed hogs, three dollars and twenty-five cents per hundred; hams, four cents per pound; butter, ten cents per pound; eggs, eight cents per dozen, and other articles equally low. In the river counties of Iowa beef is only two dollars and fifty cents per hundred, or at the rate of two and a half cents per pound.

Car Coverings.

The scarcity of the material known as Duck, has led to the ingenious substitution of other materials in its place, particularly in the form of car covering. Williams & Page of Boston, offer to railway companies, a new combination of mastic and burlap which is coming into extensive use, and is a perfect success. See advertisement.

United States Securities not Taxable.

The Supreme Court of the United States has decided at this present term that Government securities are not subject to State taxation. This of course renders them more valuable as an investment, and prices have accordingly improved.

Comptroller of the Currency.

It is with great satisfaction we learn the appointment of Thomas W. Olcott, Esq., the President of the Mechanic's and Farmer's Bank of Albany, to the office of Comptroller of the Currency, in which he is to exercise a supervision of the Banking associations likely to be created under the recent act of Congress. A more judicious selection could not have been made. Mr. Olcott has long enjoyed a high reputation as a banker and financier. He is well known throughout the United States by our monied men, whose confidence he justly possesses; he has been the intimate friend and adviser of our most distinguished State authori ies in the palmiest days of the Empire State; and possesses large, enlightened and liberal views, with appropriate caution and skill in their development.

In this appointment, we see, as we hope, the dawn of a new policy at Washington, that of reposing confidence in the honest and capable, and of bestowing honor and office on the most worthy. Let this principle continue to actuate the President in his future selections, and most of his present embarrassments will disappear.

☞ It is stated that the Pennsylvania Railroad ompany have leased the Elmira and Williamsport railroad, and will, in connection with the Erie and the Buffalo, New York and Erie roads, make a direct passenger line between Buffalo and Washington.

Taunton Locomotives.

The Locomotive Works at Taunton, Mass., are turning out a large number of engines of the first class. Three were sent from there recently for the use of the government, of which two were built by Wm. Mason & Co., and the third by the Taunton Locomotive Manufacturing Co. The latter have recently built for the Central Railroad Company of New Jersey a locomotive which is to burn hard coal, and are building another for the Reading Railroad, where one has already been used with success. These locomotives are of peculiar construction. An ordinary grate of cast iron if placed in one of them would be burnt out in a few days. But by making the grates of tubes like gas pipes, which are filled with water, it is found that they will stand the intense heat to which they are subjected. The fire box is unlike the ordinary kind, and the engineer, as becomes his high office, is able to look down on the fireman, being several feet above him. Hard coal burning engines are fast coming into general use; and the effects will be extensive and beneficial. We have in our inexhaustible mines an abundant supply for the immense and constantly increasing demands of railroads.

Pittsburgh, Ft. Wayne & Chicago Railway.

FIRST ANNUAL REPORT.

To the Stock and Bondholders of the Pittsburgh, Fort Wayne and Chicago Railway Co.

The Board of Directors in presenting to you this, the first Annual Report, will embrace in it the operations of the Railway for the whole of the calender year just closed, although the Company only came into the possession of the Railway, and took charge of its management, through the Board of Directors, on the first of May last.

The Earnings of the Railway for the year were:

From passenger travel		$1,116,740 62
" freight traffic	$2,401,630 13	
Less amount refunded	11,020 19	
		2,390,609 94
From U. S. Mail transportation		93,900 00
" Express Companies		36,107 32
" Cleveland and Pittsburgh R. R. Co. for use of track between Pittsburgh and Rochester		85,000 00
From rents of buildings and grounds		3,619 73
" miscellaneous sources		8,312 82
		$3,734,290 43

The ordinary expenses for operating the Railway during the same period were:

For conducting transportation	$504,867 80	
For motive power	634,006 66	
" maintenance of cars	169,122 72	
" maintenance of way	501,420 68	
" general expenses	68,980 97	
		1,878,398 72
Leaving a balance of		$1,855,891 71

Or the cost of ordinary expenses amounts to 50 per cent. of the gross earnings.

The expenses for the year, other than what are usually called operating expenses by the custom of this country, were:

For expenses of Trustees towards the re-organization of the company	$133,455 13
For purchase of right of way, and graduation	79,016 39
For superstructure of Railway, including ballast	185,182 57
For real estate, including seven acres in the centre of Chicago, with 850 feet of river front	396,340 43
For buildings—passenger and freight houses, engine houses, machine shops, tool houses, wood and water houses	148,241 81
For machinery and tools for shops	8,112 97
" locomotives	97,152 76
" car equipments	170,810 11
" fencing railway	17,575 52
" Taxes—Federal, State and Municipal; interests and discounts on currency	53,095 49
	$1,288,983 18

Leaving a balance over all expenditures, ordinary and extraordinary, of $566,908 53, as shown by the entries in the books of the Comptroller. This amount of extraordinary expenses is made up, however, in part, of the cost of work done and purchases of real estate made previous to 1862, and which were paid for at the time by the issue of what are termed Ohio and Pennsylvania Railroad Company "Bridge Bonds," amounting in the aggregate to $585,173. The Road was sold, under the order of the U. S. Court, subject to these two liens; and this Company purchased the Road of the Trustees, also subject to the same liens; so that the amount of these Bonds was a first lien on the income of the Railway, and was accordingly so charged, in the books of the Comptroller, against the Revenue, as a portion of the proper expenses of the Railway for the year. Article 9th of the Third Mortgage Trust Deed recognizes this principle.

To obtain the true balance arising from the actual working of the Railway for the past year, the amount of expenditures, which were made for the indebtness created in previous years, should not be taken into the account. On this principle the result would be as follows:

Gross earnings for 1862		$3,734,290 43
Deduct ordin'y exp'ses.	$1,878,398 72	
" extraordinary expenses, less am't of bridge and depot bonds, which are charged against Income	763,810 18	
		$2,642,208 90
Net balance from the actual operations for the year		$1,092,081 53

The expenditures for grading new side-track, and grading at stations; widening embankments, or with permanent bridges; ballasting and raising road-bed; replacing wooden culverts and bridges with more permanent structures; purchase of new locomotives, cars, machinery and tools; improving and erecting station buildings, engine houses, machine and other work-shops, and wood and wafer stations,—have been termed extraordinary, because such work is usually and properly paid for by "capital," and not by earnings, unless there be surplus earnings beyond ordinary dividends, in which event such surplus might then very judiciously be invested as capital. As this Company has no other source to look to for means than the earnings of the Railway, these earnings have to fill the function of capital, and of keeping capital intact, by paying for all repairs, and depreciation. The word "extraordinary" must not be taken in the sense of "unusual," as though such expenditures would not be made in subsequent years. Similar "extraordinary" expenses will be required each year, for several years to come, until the Railway and Equipment shall be, as expressed in the Third Mortgage Trust Deed, "in high condition." To reach this condition and add to the equipment of the Railway and the facilities for conducting profitably the immense traffic which this important line is unquestionably destined to attract over it, will require time to accomplish. In fact, time is essential, not only to do the work with economy and judgment, but to develop with some clearness all the requirements which the future may make upon the Railway. The time thus required will enable the Managers, it is hoped, to do the work out of the current income, without exhausting the whole of it, as against the the Third Mortgage Bondholders and Stockholders, for a longer period, at least, than the current year. As the net revenue of Railways is dependent upon uncertain elements—such as fluctuations of trade, the yield of the products of the earth, the success of manufacturing industry, the price of labor and supplies and competition between rival Railways—the amounts to be realized, must of necessity be uncertain, and therefore the expectations of the Managers may not be realized, or may not be more than realized. The expenses incident to the cost of Trusteeship and Re-organization, amounting, during the year, to $133,455 13, were audited and paid by the Trustees in New York, and then passed into the Comptroller's accounts. All other expenses appertaining to the management of the Railway, from the 1st of January to the 1st of May, while in the hands of the Trustees, were made by the officers in charge, and passed upon in the usual manner.

The gross earnings of the railway for the year exceed those of last year by $702,502 92, of which $484,902 59 were from freight, and $214,084 86 were from passengers. The increase of freight earnings on the two divisions of the railway was in about the same ratio, while the increase of passenger earnings on the Eastern Division exceeded those on the Western Division about seven per cent. This increase arose from the greater military transportation on the former division.

The whole number of passengers carried on the railway during the year was 656,885, and the average distance traveled by each passenger was seventy miles. The gross earnings per mile on the Eastern Division were $10,141 43, and on the Western Division $6,324 31, and for the entire line of Railway from Pittsburgh to Chicago $7,997 67. About twenty-eight per cent. of the increased passenger earnings was derived from increase in transportation of troops, without, however, a corresponding increase of profit; and about twenty per cent. of the increased freight earnings was derived from the military transportation for United States Quartermaster's Department, to the exclusion, most generally, of a like amount of tonnage of the ordinary traffic of the country, for which much better rates were offered, and might have been had.

It is difficult to estimate what would have been the earnings of the railway from traffic, during the year, if the Company had been in a position to avail itself of all that was offered to it for transportation. The equipment owned by the Company was taxed very nearly to its capacity; which, with the limited outlets to the East, compared with the facilities for transportation in the West, puts a limit to the business of the Western Roads; this railway quite as much as any other. During the year 1862, by reason of less favorable navigation of the Ohio river than in 1861, and the opening of the Baltimore and Ohio Railroad, the Pennsylvania Railroad was able to take from this railway a larger proportion of the freight in the former than in the latter year. This increased facility for shipping eastward from Pittsburgh increased the eastward-bound tonnage fourteen per cent.—certainly a very small increase of tonnage over former years, compared with the immense pressure which there has been to obtain transportation from the Mississippi valley to the seaboard. The great increase of tonnage of this Railway during this year has been in its westward bound trade, which will doubtless strike most persons as an anomaly. In 1861 the Western-bound business was greatly paralyzed by reason of the rebellion; whereas the East-bound transportation was increased by reason of the closing Mississippi river. The West-bound tonnage decreased in 1861, as compared with 1860, about seven per cent., and the East-bound increased during the same period about twenty-seven per cent. This year the difference between the East and West bound tonnage on this Railway is more marked, but in opposite directions, and for different reasons. This year, as has been stated, the increase of East-bound tonnage over 1861 has been fourteen per cent. The increase of West-bound tonnage has been forty-six per cent., being a greater increase in this single direction than the entire increase in both directions had been in any former year. This increase is due to the fact that in former years the East-bound tonnage on all railways greatly exceeded the West-bound, and that consequently West-bound cars were moved empty, or with light loads, so that we were in a condition to greatly increase, and did greatly increase, our West-bound trade, without requiring any addition of car stock or motive power, and could not increase our East-bound trade without increasing both, which we were not able to do; and even if we had so increased, there was no outlet to the East for any more tonnage over the Pennsylvania Road. The increase of freight earnings for the year was greater than the increase of tonnage, for the reason that so much of the increased tonnage was West-bound merchandise, which pays a higher rate of freight than East-bound provisions and breadstuffs.

Since the Railway opened for business to Chicago, in January, 1859, the rolling stock, owned by the Company, has been inadequate to fully accomodate the trade, and leave sufficient for the use of the Railway for the purpose of ordinary repairs and improvements. During this year, fifteen new locomotives were purchased, paid for, and put on the road. Two of them were put on in January, and the remaining thirteen in the latter part of the year, so late as not to get an average of more than a few weeks service out of them. The U. S. War Department made a requisition on us, and took away in July last, three locomotive passenger cars, used in the New Brighton accommodation trade, with advantage and economy to the Company, causing some inconvenience, as well as some loss to our earnings. This loss reduced the actual increase of locomotives, for the year, to twelve. The car stock has been increased by the building, at the Company's Shops at Fort Wayne of, 50 box freight cars, 81 live stock cars, 48 flat cars; total, 179 cars. There were built at Fort Wayne, entirely new, to replace missing numbers, 42 box freight cars, 24 live stock cars, 3 flat cars; total, 69 cars. At the shops in Allegheny City, five new passenger coaches were built, and put in use, to replace a like number of old ones which were unfit for service or repair. The cost of these were charged in the ordinary repairs of the road. There were purchased from Merrick, Hanna & Co., four new iron passenger coaches, built at their shops, at New Brighton, Pennsylvania, and which have been in use an average of about six months. There was, also, on the road, at the beginning of the year, an iron passenger coach, built by this firm, in 1861, and which has been in constant use ever since, without any other repairs than re-painting. There is, also, on the road, one of their iron box freight cars, which has been in constant use for more than two years, without repairs. Thus far our experience is decidedly in favor of the iron cars built by this firm.

Contracts have been made by the General Superintendent for the following described additions, to the rolling stock, for the year 1863: 11 passenger engines, 14 freight engines, 150 box freight cars, 6 passenger coaches of wood, 6 passenger coaches of iron. In addition, it is proposed to build at the Company's shop, at Fort Wayne, 8 emigrant cars, and as many box freight and flat cars as can economically be done, which may, perhaps, exceed 250, one half of each description.

The repairs to road bed and track were not as extensive during the year as was contemplated at its beginning. This deficiency of work was caused by unfavorable weather the first half of the year; scarcity of labor and pressure of freight traffic throughout the year. The work of renewal of iron rails and cross-ties was quite satisfactory, there having been put into the tracks, 51¼ miles of re-rolled iron, 33¼ miles of iron repaired at smith shops, 171,411 new cross-ties. If, with this renewal of materials, the raising of the track, ballasting and ditching could have been correspondingly progressed with, very important beneficial results would have been obtained. Substantial and important repairs and renewals were made to bridges, to the extent of $40,000, and work of the same kind is in progress. Valuable permanent buildings have been completed or commenced, to the amount of about $60,000, which has been paid out of the earnings of the railway. The most important are: an iron and brick freight house, at Chicago; a brick engine house, with iron roof, at Fort Wayne; a brick car shop, with slate roof, at Fort Wayne; a brick car shop, with slate roof, at Crestline; a brick engine house, at Allegheny City, and a passenger station at Allegheny City.

The water houses, for supplying locomotives, have been found too small, and too few, for the largely increased and increasing traffic. To remedy which, six new permanent ones have been erected on the Western, and four on the Eastern Division. Also, the facilities for increasing the supply of soft water from living streams by machinery, at Fort Wayne and Lima, have been completed, all of which cost about $25,000.

Notwithstanding the large amount of real estate owned by the Company, in Chicago, it has been found necessary to make additional purchases, to the extent of $9,239. And at Fort Wayne, for the extension of shops, to the extent of $7,400. The change of location of the passenger and freight station, at Chicago, leaves the company some valuable surplus ground, at the corner of Van Buren and Canal streets, which may be sold, so soon as the demand for real estate becomes active, and that time seems to be near at hand.

The passenger accommodations at Pittsburgh and Chicago, and especially the first named, are very inferior. At Chicago, the ample, suitable and valuable grounds of the company are now occupied for the purpose, using however, temporary and insufficient buildings. At Pittsburgh, the grounds of the Pennsylvania Railroad Company are used in common with that company, and the Cleveland and Pittsburgh Railroad Company, but with too little space, and no accommodations worthy of the name. It is expected that the Pennsylvania Railroad Company will be able in a few months, to so far arrange with the City authorities and property holders, as to commence a suitable union passenger station house, and if so, we shall doubtless be able to arrange to occupy it for the business of this company when completed. We hope, before long, to find ourselves able to put up such a passenger station building, at Chicago, as will meet the wants of the company, the convenience of the public, and be an ornament to that great City.

On the 23d of September last, the Cleveland and Pittsburgh Railroad Company filed a petition in the Court of Common Pleas of Allegheny County, for viewers, to assess damages to this company, on their appropriation for right of way from Manchester siding to Rochester, a distance of 23½ miles. That company appropriated, in their petition, throughout the distance named (excepting a short distance at Sewickley) all the right of way owned by this company, between the south rail of the south track and the Ohio River, excepting a strip, six and a half feet wide, next to the south rail, with the restriction, that the north rail of the north track of that road should be 10½ feet from the adjoining rail of the railway of this company. That is, the tracks of the two companies were to be 10½ feet apart, and the extent of right of this company, on the south side of its main track should be limited to six and one half feet wide. The counsel of this company advised that such an appropriation of the right of way of this company could not be made under the laws of the State and decisions of the Courts. Your Board of Directors believed that the building and operating of the Cleveland and Pittsburgh road, on the location filed by said company, would be dangerous to the public; dangerous to the persons employed on that portion of the railways of the two companies; exceedingly oppressive to this company by adding greatly to its expenses and risks; diminishing very materially the facilities for transacting the business of the road, and making repairs, that no public policy or convenience called for such a location, and that the only purpose of making such a location was to cheapen the building of the Cleveland and Pittsburgh road, by using the right of way, expenditures for cuttings, embankments, masonry, &c., of the Company, at such small cost, as by specious argument they might get a jury to allow. Acting on the advice of counsel, and their own convictions of right and duty, the board resisted the petition of the Cleveland and Pittsburgh Railroad Company. The Court, although it appointed viewers, would not allow any award to be filed until it should first decide whether or not this company had any right of way, not needed for their present or future use, which surplus, only, could be subject to appropriation. A commissioner was appointed to take testimony, to be submitted to the Court, upon which, under the law, it was to make its decision. While the testimony was being taken, private parties, interested in the stock and securities of the Cleveland and Pitts-

burgh Railroad Company, submitted informally, to members of your board, their views as to harmonizing the interest of the two companies, and save the expenditure of capital of that company, with which it was about to embark, in building another road into Pittsburgh, within a few feet of one already built, the building of which would create a competition injurious to both, and advantageous to no permanent interest. The managers of this road, whether of the present company or of the old one, invariably tendered, and were always ready to consummate a liberal arrangement by which the business of the Cleveland and Pittsburgh Road could be done, between Pittsburgh and Rochester, over the railway of this company. Knowing such views had always been held, the members of the board above referred to, had no hesitation in saying to the parties interested in the Cleveland and Pittsburgh Railroad Company, that an arrangement, based upon the general views discussed, would, without much doubt, be agreed to by the Board of Directors of your company. A meeting of your board was soon after called, in New York, for the purpose of considering the proposition, which resulted in an agreement which was signed by the President of the two companies, on the 15th of December last, to go into effect on the 1st of April next, if ratified by the stockholders, and others entitled to vote, of the respective companies. The stockholders of the Cleveland and Pittsburgh Railroad Company ratified the contract at their annual meeting, on the 7th of January, ultimo. We now submit the agreement to you for ratification or rejection; only remarking that it has the unanimous approval of your board, which approval was given on the expressed intention of the parties, that the practical control of the operation of both roads (which it is believed the written instrument secures,) rests with the Board of Directors and principal officers of the Pittsburgh, Fort Wayne and Chicago Railway Company.

On the 20th of February last, the President of the Company addressed those of you who were at that time stockholders in the old corporation, in reference to your transfering your interest to a new corporation, in the following language: "This new corporation will be formed in a few days, and within two months thereafter, it is hoped you will be a shareholder in a company unembarrassed by debt, and which will ultimately remunerate you for your advances in aid of building this important line of railway." What was then anticipated, has since been realized, or the accomplishment of which is now well assured. The new corporation, in which you are now shareholders, was formed on the 26th of February last, one year ago this day. Four days thereafter was executed the final deed, conveying to this company the continuous railway from Pittsburgh to Chicago, including all the property, of every description, held or acquired for use in connexion with said railway, late the property of the Pittsburgh, Fort Wayne and Chicago Railroad Company. On the first of May, following, the entire property was transferred into the possession and control of the officers of the Company, and has since been operated by them, under the direction of your Board of Directors. The Transportation Department was placed under the charge of John B. Jervis, Esq., as General Superintendent, whose long and successful experience as a Civil Engineer—whose intimate practical relations to, and experience with railway management, as President, Chief Engineer, and Superintendent, together with his high personal character, gave warrant to your board that they were about to commit this important trust to the right hands. The operations of the year, and their results, assure them that they made no error in their selection.

But little change has been made in the various chief officers of the company and railway; and the board take great pleasure in bearing testimony to the zeal and fidelity, generally, with which they have discharged the duties of their respective positions.

To prepare the necessary Report for the Annual Meetings of Stockholders, without infringing too largely on the time necessary to keep up with the regular business of the Company, they should be held as late as the middle of March; and we therefore recommend that you so appoint the time for the future Annual Meetings.

By order of the Board of Directors.

G. W. CASS, *President.*

PITTSBURGH, FEBRUARY 25, 1863.

GENERAL ACCOUNT, DECEMBER 31ST, 1862.

Cost of railway, equipment, structures, &c.	$17,736,353	42
Stock of supplies for current operations	462.541	08
Due from other companies	121,429	15
Miscellaneous assets	306,014	72
Cash in hand	641,667	21
Balance to Debit of Income Acc'nt	183,671	11
	$19,451,676	69
Capital stock	$5,709,591	61
Funded debt	12,985.173	00
Due to other companies	44.623	45

Due for current expenditures in December and prior	413,237	89
Due J. F. D. Lanier, *et al*, Trustees.	312,399	20
	$19,451,676	69

Mineral Wealth of the State of Maine.

For the past two years a scientific survey of the State of Maine has been going on, sustained by a small annual appropriation, and it is to be continued until completion. From the report of a Legislative committee on this subject, we learn that the results of the survey have been highly satisfactory. Among the discoveries made are the following:

An abundance of an ore of iron, in some important respects unlike common ores of this metal; the peculiarity of which is, that it will furuish plating for the modern ships of war, impenetrable to any shot hitherto invented, a fact demonstrated by the late experiment at Shoeburyness, England. All the facts obtained by the survey in this connection have been communicated to the proper authorities at Washington. Several abundant deposits of marble and of limestone have been found during the past year in Aroostook county; known deposits of the best limestone of Knox county have been traced to localities hitherto supposed destitute of it; besides which have been found, in various places, ores of copper and of lead, and roofing slates; also feldspar, suitable for fine potteries; granulated quartz, suitable for glass manufactures; marls of high fertilizing power, or which by slight manipulation may be converted into utility; and many other valuable minerals and building materals, besides the discovery of *a gold field similar to that of Nova Scotia, which has been found to yield profitable returns.* The discoveries made in the more intricate but not less interesting subject of organic remains, and the developments in botany, zoology, and entomology, are such as have attracted the attention of the savans on both sides of the Atlantic. These results are of inestimable importance, and will be of peculiar value to the community.

☞ The new railroad built to connect the Point Breeze Gas Works with the Pennsylvania railroad has just been completed. By means of this road, the coal brought over the Pennsylvania Railroad for the gas works can be delivered at Point Breeze, saving the expense of shipping on board canal boats at Market street, and handling at the works.

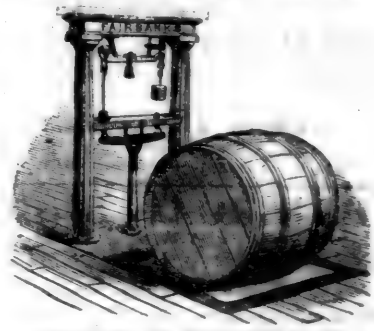
QUARTZ MILLS

OF THE MOST APPROVED KIND,

MANUFACTURED BY **BURDON, HUBBARD & CO.,** 103 Front st., BROOKLYN, N. Y. Also Agents and manufacturers of the BEST PATENT PREMIUM AMALGAMATORS, the best and simplest in use for saving both **fine** and **coarse** gold.

SUBSTITUTE FOR

CAR DUCK.



Kingman's Car Covering.

THIS is a kind of Elastic Mastic, a thick coating of which is applied to the top of the Car, and into it a heavy Burlap or Bagging is imbedded and thoroughly painted, thus making a covering VERY MUCH LIKE **CAR DUCK,** but at this time at half the cost. It is now successfully used by several New England Roads and Car builders. Directions and particulars sent when requested. This Mastic and Burlaps for sale by

DIRECTLY OPPOSITE THE CITY HALL.

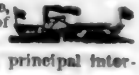
THE NEW YORK CENTRAL R. R. CO.

TREASURER'S OFFICE,
ALBANY, January 21, 1863.

SIXTEENTH SEMI-ANNUAL DIVIDEND.—The Directors of this Company have declared a Semi-Annual Dividend of THREE AND ONE-HALF per cent. on the capital stock thereof, free of the United States income tax, payable on the twentieth day of February next, on stock registered at New York Boston and Albany, respectively, and on the twentieth day of March next on stock registered at London.

Dividends in New York will be paid at the office of DUNCAN, SHERMAN & Co.; in Boston, at the office of J. E. THAYER & BROTHER; in Albany, at the ALBANY CITY BANK; in London, at the UNION BANK OF LONDON, pursuant to circular and notice of December tenth, 1862, from the Transfer Office in that city.

The Transfer Books at New York, Albany, and Boston will be closed at the close of business on Saturday, the thirty-first day of January instant, and be re-opened on the morning of Monday, the twenty-third day of February next.



JOHN V. L. PRUYN,
Treasurer.

615

ERIE RAILWAY.

PASSENGER TRAINS leave, via Pavonia Ferry, from foot of Chambers st., as follows, viz:

7.00 A. M., EXPRESS, for Buffalo, and principal intermediate Stations.

9.00 A. M., MILK, *daily*, for Otisville, and intermediate Stations.

12.15 A. M., ACCOMMODATION, *daily*, for Port Jervis, and principal Stations.

3.30 P. M., WAY, for Middletown, Newburgh, Warwick and intermediate Stations.

6.00 P. M., NIGHT EXPRESS, *daily*, for Dunkirk, Buffalo, Canandaigua, and principal Stations. The Train of Saturday, runs through to Buffalo, but does not run to Dunkirk.

6.00 P. M., EMIGRANT, for Dunkirk, and principal Stations.

CHA'S MINOR, *Gen Sup't.*

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER,** 104 Wall st.

The above CEMENT is used in most of the fortifications building by government.

RAILROAD IRON.

THE undersigned, agents for the manufacturers, are prepared to make **CONTRACTS FOR RAILS** delivered free on board at ports in England, or exship at ports in the United States

M. K. JESUP & COMP'Y,
44 Exchange Place.

New York, 1st June, 1859.

RAILROAD IRON.

ENGLISH and AMERICAN Railroad Iron for delivery in New York and other markets in the United States and England. Contracts negotiated by

E. A. & S. W. HOPKINS,
70 Beaver st., New York.

RAILROAD IRON.

THE subscriber is prepared to sell AMERICAN and ENGLISH **RAILROAD IRON, CHAIRS, SPIKES, CARS** and **LOCOMOTIVES,** at the lowest market price, and securities taken in part payment.

B. F. FRENCH,
Cor. Nassau and Cedar Sts., N. Y.

RAILROAD IRON.

New York and Erie pattern, Crawshay's make, in yard at Brooklyn, ready for immediate delivery; for sale by

DEHON, CLARK & BRIDGES,
New York, Nov. 13, 1862. **38 Beaver st.**

RENSSELAER POLYTECHNIC INSTITUTE,
TROY, N. Y.

THIS Institution is now in full operation, and offers superior advantages for the thorough study of the NATURAL SCIENCES, and CIVIL, MECHANICAL and TOPOGRAPHICAL ENGINEERING. Graduates of the Institute obtain without difficulty very desirable positions as Civil, Military, and Naval Engineers. The next Semi-annual Session will commence FEBRUARY 18TH, when Students will be admitted to advanced standing in the two lower Classes.

Further information, with the ANNUAL REGISTER, may be obtained from

2m3 Prof. CHARLES DROWNE, Director.

OTTO AHLSTROM,
MANUFACTURER OF THE
LOUDON & AHLSTROM'S
PATENT EXPANSION SCREW FASTENINGS,

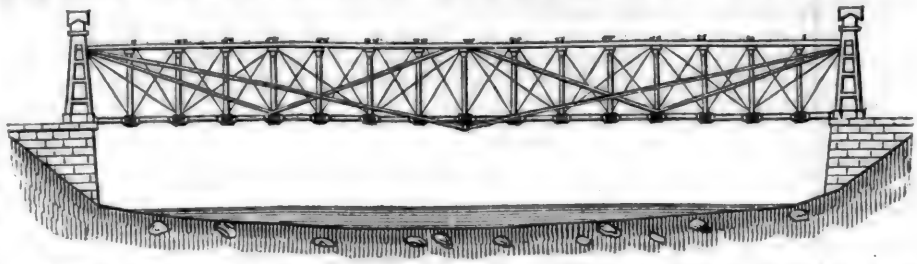
A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.



For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y

FINK'S PATENT IRON RAILROAD BRIDGE.

THE undersigned is prepared to manufacture and build in any part of the United States and Canada, at reasonable terms, **FINK'S PATENT IRON BRIDGE** in spans from 20 to 300 feet. The same is favorably known, well tested and already extensively introduced, is stronger and more economical than any other Bridge now in use, requires no repairs, and no adjustment, but is perfectly adjustable. For plans and particulars apply to

FOX LATHES.

F. W. BACON & CO.,

No. 23 PLATT, corner of GOLD ST.,

NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & Co., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciat d by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT REOILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.

Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past ten years, with uniform success, they confidently offer their services to those requiring such aid.

An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house, it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, **25** cents, Brass, **31** cents, Silver-Plated, **50** cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of **$1.25.**

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

New York, Saturday, March 21, 1863.

Progress of Improvement.—City Railways.

If we were to be asked what has caused the enormous increase of the City of New York, we should say, coal—pure and wholesome water—and omnibuses! Without fuel, no population could endure, in health, the rigors of our winters; without good water, life would not only be endangered both in summer and winter, but be miserable; and without cheap and constant conveyance from one part of the city to another, its limits would be circumscribed, and its inhabitants crowded together to their great discomfort and unhappiness.

To each of these three causes we attribute principally the great and rapid increase of the population and wealth of the city. Commerce merely could not produce it. It had the ocean and the river in 1606, and 4,302 inhabitants, but in 1790, almost a hundred years afterwards, the population was only about 33,000. If it may be said the world was not so far advanced as now, that very advancement consists among other things, in having found out how to keep warm in winter and cool in summer, how to economise and apply fuel and water, in a thousand ways not dreamed of in former years, and especially how to save time by rapidity of locomotion.

Thus we have developed our great sources of heat from our boundless and exhaustless coal measures; and New York is not only well warmed and lighted, but its various mechanical industries are helped through much of their most tedious work, by the friendly aid of the steam engine.

Instead of our old brackish and nauseating well water, with an occasional sip from the tea water pump at two cents a bucket, a noble country river has come to town; the Croton sparkles in the houses of poor as well as rich, we all drink its crystal drops and bathe in its lucid streams.

New York, however, long lingered around the Bowling Green and the City Hall Park. Canal street was an ancient and much respected barrier of distance and muddy water. It was the Rubicon of the times. But the streets were laid out beyond, and the omnibuses passed it triumphantly. In 1826, and not before, it was that the enterprising Asa Hall established a line of stages starting from the corner of Charles and Hudson street near the North River, and running through Hudson, Canal and Broadway to Wall street, and soon after Brouwer's well-known and well supported opposition occupied a route between Bleecker and Wall street.

It was surprising to see how opinions changed after these vehicles began to ply northward for passengers. Bleecker street, though far away, became desirable for residences, and some daring individuals even contemplated a future lodgment in 14th street, a fearful step in advance. Time and distance, however, yielded to the comfortable accommodations of the Knickerbockers and Waverleys, and New York pushed along towards Greenwich and Murray Hill. Within a few years, comparatively speaking, all has changed. Every body lives up town, or intends to do so. The omnibuses were about to be injured by their very success, and to die from pure repletion.

City railways were accordingly projected, long kept off by the judicious manipulations of the stage proprietors, but yet finally successful. We have them in all parts of the city *in esse* or *in posse*, and last of all, for one in Broadway, there is a general rush from numerous opposing interests, and the Legislature at Albany is embarrassed by the ingenuity and pertinacity of the various applicants.

This Broadway franchise is the most valuable of all, and an eminent merchant has offered two millions for the grant.

We confess we should not object to a well-managed railway, through this thoroughfare. It is now almost impassible, and dangerous to most people. But we think it would be no more than right, that the public should not only have the advantage of this easy, rapid and regular conveyance, but that the money it is worth should go into the public treasury. Two millions of dollars would make a sinking fund large enough to pay off much of our very serious indebtedness.

There are yet in our judgment many improvements to be made in the construction and management of our city railways. We are convinced of this after seeing a beautiful horse-car just turned out from the factory of Mr. John Stevenson, on 27th and 28th streets, intended for a Company at Havana. It is light and airy, well ventilated and cushioned, and carries at two corners of the top (in a diagonal line from each other,) two seats. The one for the time occupied by the driver, and the other by the conductor, who are thus both out of the way of the passengers. There are no platforms, and at each end there are only the step and door of an ordinary omnibus. This car when it is full, *complet*, is to carry no more, and our city cars would be improved in comfort if the same principle was adopted here. We expect they will some of these days be hung on springs and much reduced in weight, and with the rule established that when they are full, no more passengers can be admitted. The enormous profits realized by the present companies, should have been enough to satisfy the proprietors, and if any more charters are to be granted, at least for a Broadway railway, the public convenience should be secured by the most rigid enactments. Yet even after all the care exercised to secure the rights of passengers, it is not impossible that Governor Seymour, remembering the views expressed in his treatise on the topography of New York, by way of carrying out the theory he there advocates, as to the rights of cities and towns, in contradistinction to those of the State, may interpose a

veto, and leave the city of New York to dispose of its own franchises to please itself.

As to the omnibus proprietors, to whom we owe so much from the beginning until now, we have only this comfort to give them, that they have long enjoyed a valuable monopoly, and must like other good people, yield gracefully to "destiny and time."

Erie Canal.

The Buffalo Board of Trade, at a meeting held on the 12th of March inst. unanimously adopted resolutions in favor of doubling the locks on the Western division of the Erie canal; and of constructing the new ones 200 feet in length and 25 in breadth, so as to pass two boats of the present improved class, at the same time.

Erie Railway Company.

The earnings and expenses of this road, for the years ending December 31, 1861 and 1862, have been as follows:

Receipts:	1861.	1862.
From freight	$5,011,349 09	$7,065,363 07

Net earnings	$2,429,698 34	$3,539,585 76

Disbursed in 1862 as follows:

Interest on mort. debt	$1,899,405 00	
Rent of Union R. R.	83,400 00	
" Chemung R. R.	30,000 00	
" Elmira & Can. Railroad	25,000 00	
" Long Dock property	144,040 00	
" Buffalo Br	2,200 00	
Internal revenue taxes	27,616 88	
Taxes on real estate	71,830 43	
Pavonia Ferry	25,006 28	
Loss by Fire at Elmira, Cars destroyed and Engine exploded	94,736 00	
		1,903,234 99
Surplus		$1,636,350 77
Old Indebtedness paid	$1,182,944 49	
Five per cent. Dividend on Prefered Stock	426,785 00	
		1,609,729 49
Balance		$26,621 28

The increase of earnings over last year was $2,186,152 35. Of this increase $2,054,013 98 was from transportation of freight and $114,480 99 from transportation of passengers. The earnings from freight for the years ending December 31, 1861 and 1862, compare as follows:

	1861.	1862.
Through, East	$2,706,141 50	$3,639,764 42
Way, "	1,198,193 11	1,462,863 40
Through, West	654,095 71	1,196,750 00
Way, "	453,230 82	765,985 25
Total East and West	$5,011,661 14	$7,065,563 07

The increased earnings from way freight is one of the most encouraging features.

The tons of freight carried during the same time were:

	1861.	1862.
Through, East	405,505	471,814
Way, "	422,302	501,018
Through, West	87,784	149,896
Way, "	422,783	553,006
Totals in Tons	1,338,374	1,675,234

The tonnage of fuel for Company's use is not included in these statements.

The number of Miles Run in 1861 by Freight trains was 2,795,826; the tons of freight moved was 1,338,374 or 0.48 tons moved for each mile run. The Earnings from Freight was $5,011,661 14 or $1.79 per mile run, at a cost of $2,807,884 60 or $2.09 per ton moved, or $1.00 per mile run.

To reduce the two years 1861 and 1862 to tabular form, would show:—

FREIGHT TRANSPORTATION.

	1861.	1862.
Miles run	2,795,826	3,290,400
Tons moved	1,338,374	1,675,234
Tons moved per mile run	0.48	0.509
Earnings	$5,011,661.14	$7,065,363.07
Earn'gs per mile run	1.79	2.15
E'rn'gs pr. ton moved	3.74	4.22
Av. cost pr. ton mov'd	2.09	2.23
Av. cost per mile run	1.00	1.13

The "old indebtedness" paid during the year consisted of Trustees' Certificates given for mortgage coupons surrendered to them in pursuance of the plan for reorganization, and receipts given for assessments laid on the capital stock, both with accumulated interest; and sundry claims and expenses arising under the Receivership which could not be adjusted and paid before the closing of his accounts, but were assumed and paid by the Company.

The statement above of earnings and expenses shows a surplus of net earnings of $1,636,350 77, or more than eight per cent. on the whole capital stock, common and preferred; allowing seven per cent. on the preferred stock, and there would remain nine per cent. on the common stock. The indebtedness as stated, above, was a charge on the net earnings before the payment of any dividend. The Directors were strongly urged in the early part of the year to fund this indebtedness, which, with interest, at that time, amounted to about $1,100,000, in order that the whole net earnings of the road might be applied to the payment of dividends on both classes of stock. The Board was not willing to increase the permanent debt of the Company for this purpose, but deemed it for the interest of the stockholders that the debt should be paid out of the net earnings, as provided for in the contract between the Trustees and the stock and bond holders.

A reference to the tabular statement of the expenses of operating the road, in detail, appended to this report, will show that about $750,000 more were expended last year than was expended the year before in the repairs of rolling stock, road-bed, track, bridges and other structures. A large portion of this increased cost of repairs is due to the increase of traffic and the enhanced cost of labor and materials. All repairs have been made in the most thorough manner, and in case of renewals, the new structures are in all respects better than the old.

The road-bed has been very much improved, by widening cuts, deepening ditches, adding new culverts, and raising the grade in places exposed to floods, substituting stone ballast at points where good gravel could not be readily procured, and increasing the number per mile and the size of cross-ties used in repairs of track; 15,541 tons of new iron, equal to 155 miles of single track, have been laid, at the cost (the difference between the value of old and new iron) of $432,685, and 344,149 cross-ties.

Several important bridges have been wholly rebuilt, and others thoroughly repaired. In the Autumn of 1861 a disastrous flood carried away a number of bridges on the Western Division, and so seriously injured others as to render their renewal necessary. This flood occurred so late in the season that little beyond placing temporary structures could be done until Spring. In the last year all these bridges have been replaced by new and improved structures, in most cases of wider span, to give increased water way, and with stone abutments and piers where they were originally of wood.

The whole road is now, for the first time, fenced, on both sides, throughout its whole length, and the expense under this head, which has been large in the two last years, will hereafter be confined to ordinary repairs.

Four and a half miles of double track on the Eastern Division between Suffern and Ramseys were completed last summer. This work was commenced by the Receiver and a large portion of the cost charged in his accounts. Six and half miles of additional side track have been laid.

Seven locomotives have been purchased at a cost of $56,687 03, and contracts for fifteen in addition, of the largest class, were made last summer; none of the last were received before the close of the year. Three have been delivered since the first of January and the whole number will be completed in the next two months. The cost of the new locomotives has been charged to construction.

The repairs to locomotives have been extensive and thorough. Seventeen have been rebuilt at the Company's shops, and adapted to burning coal. These engines have been made in all respects equal to new, and the whole locomotive stock is in much better average condition than ever before.

The inadequacy of the stock of freight cars for the increased business induced the Directors to order the building at the Company's shops, of so many as the officers might find necessary to meet the demands of the traffic. There have been built and rebuilt 757 cars. The cost of the new cars has been charged to construction and the cost of those rebuilt, to transportation. The addition to the stock, of all kinds, has been equal to 457 eight wheeled cars. One hundred more freight cars will be added to the stock this spring.

The freight cars of this Company are larger than most of those used on narrow gauge roads and capable of carrying about twenty per cent. more freight.

The development of the coal trade on the road has engaged the attention of the Directors as well to secure a desirable traffic, as to provide a supply of coal at all points on the line for our own consumption, which is already large and will be constantly increasing; and to encourage the establishment of manufactories by ensuring to them, at low prices, a constant supply of the best fuel. The proximity of the road to the great anthracite and bitumenous coal fields at several points, distant from each other, will enable the Company to supply all parts of the road, without resorting to a long haul. Bitumenous coal is now brought to the road from the Blossburgh mines, at Corning; anthracite and bitumenous coal by the Elmira and Williamsport Railroad and the North Branch Canal, at Elmira; anthracite coal by the Delaware, Lackawanna and Western Railroad, at Great Bend; and anthracite coal by the Delaware and Hudson Canal at Port Jervis.

The greater part of the coal transported last year was carried in the cars of other companies and hauled by their own locomotives, paying this Company a fixed sum for trackage. The Delaware, Lackawanna and Western Railroad Company transports coal from Great Bend to Owego and intermediate points, and the Fall Brook Coal Company transports bitumenous coal from Corning to Elmira and over part of the Canandaigua branch to Seneca Lake, on these terms. Arrangements are in progress by which the Western Division of the road will be supplied with coal from the mines lying south of Olean, and from the Atlantic and Great Western Railway.

The Directors in the early part of the year entered into a contract with the Pennsylvania Coal Company for the transportation of a very large quantity of coal, annually, from the termination of

that Company's railroad at Hawley, to Newburgh, Piermont and Jersey City. For carrying out that contract a railroad is being constructed, under the direction of the officers of this Company, from Lackawaxen station on our road, to Hawley, and will be completed early in the ensuing summer. The length of this road is about fifteen miles. An equipment of coal cars and engines for this business has been ordered.

The use of anthracite and bitumenous coal for fuel for locomotives has been completely successful and is attended with great economy. There are now in constant use on the road thirty-eight coal burners, and all the new locomotives ordered, as well as those that are rebuilt, are adapted to burning coal.

The Atlantic and Great Western Railway is in operation to Ravenna, and will in a few days be opened to Akron, Ohio, 200 miles from its junction with the Erie Railway at Salamanca, with two branches running into the great oil region, one 34 miles, and the other 26 miles in length, making in all about 260 miles of broad gauge tributary road. The advantages of this new road to the Erie cannot be well over estimated. Passing through a rich agricultural and manufacturing region into the most productive part of Ohio, and connecting by its branches with the oil wells of Pennsylvania, the business it will add to the Erie Railway will be large. A connection will soon be made leading direct to Cleveland which will render our road independent, in its South-western business, of influences which have heretofore operated, in the interest of a rival line, greatly to our injury. The management of the Atlantic and Great Western Railway is impressed with the identity of interest that must exist between the two roads, and all the business arrangements necessary to harmonious co-operation have been concluded in the most satisfactory manner. To T. W. KENNARD, Esq., Chief Engineer, great credit is due for the energy and skill he has displayed in the rapid execution of the work in the face of more than ordinary difficulties.

The expenditures for construction during the year have amounted to the sum of $303,843 13, and for the following objects:

Pavonia ferry	$55,665 11
Macnine and workshops	671 67
Machinery in shops	55,844 32
Locomotives	56,681 03
Passenger cars	16,614 59
Freight cars	115,726 20
Iron bridge	465 21
Telegraph	2,175 00
	$303,843 13

No part of the earnings of the road has been applied to the payment of this account. There has been received from the proceeds of sale of property of the old Company, $256,320 26; and from Nathaniel Marsh, Receiver, $152,075 00, making $408,375 26, and leaving $104,532 13 to the credit of Construction Account.

At the commencement of the year the Directors determined to dispose of all the interest of the Company in steamboats on Lake Erie, and to invest the proceeds in rolling stock and other machinery much needed for the increasing business of the road. The boats were sold to the Erie Railway Steamboat Co., which was organized with ample capital, and under agreement with this Company to run their boats in exclusive connection with the road, and to furnish such additional boats as the Directors might from time to time require. Under this agreement four now boats have been built, and the line now consists of ten first class propellers, running between Dunkirk and Cleveland, Sandusky and Toledo. Connection with Chicago and other ports on Lake Michigan is maintained by propellers, owned by other parties, running to Buffalo.

The new terminus at the Long Dock has afforded all the facilities for the prompt receipt and delivery of freight that was calculated upon when the works were projected. For the first time since the road was built its capacity for receiving and discharging freight exceeds its power to transport it. This state of things will be better appreciated by railroad managers than the public. The ferry between New York and Long Dock has been improved and greater conveniences have been furnished to public travel.

The Directors have recently taken a long lease from the first of May next, of the Buffalo, New York and Erie Railroad, with its rolling stock, depots and docks, on terms considered advantageous to the Company. The road leased commences on the main line near Corning and runs through Bath, Avon, Batavia and Attica to Buffalo, one hundred and forty miles, with a branch road from Avon to Rochester of eighteen miles. This company had previously acquired by purchase the railroad from Hornellsville to Attica, known as the Buffalo Division. The road now leased gives a second line from Corning to Attica, where the two unite, and run over one line to Buffalo. By this road our line is twenty miles shorter than any other between New York and Buffalo.

Satisfactory arrangements with the roads leading south from Elmira, have been made to run direct lines for passengers and freight between Buffalo, Philadelphia and Baltimore, with a change of cars, at Elmira, only.

Measures have been taken to procure additional depot grounds at Buffalo and such other facilities as are required.

It is gratifying to the Directors to report the successful result of the first years' operations under the new organization. The second year has commenced with fair prospects, and their best efforts will be exerted to make it as prosperous as the last. The financial condition of the Company is sound and it possesses a business which will ensure ample income to pay the interest on the debt, and a fair return to the shareholders. The Directors have under consideration the establisment of a moderate Sinking Fund, looking to the gradual extinction of the debt.

The equipment of the road consists of 226 locomotives, 101 passenger cars, 48 baggage and express cars, 38 emigrant cars, 3,115 freight and other cars, and 78 caboose and milk cars. The company owns one steamboat, used for towing, three ferry boats and eleven barges. The whole number of miles run by engines, was 4,835,359. Cost of renewals and repairs, $495,492 27. Cost per mile run, 10.05. The number of passengers carried was 908,533, of which 459,511 were carried westward, and 449,022, eastward. Of the westward passengers, 32,450 were through and 427,061 way; of the eastward, 14,987 were through and 434,035 way. Number carried one mile westward, 24,907,024; eastward, 32,056,207—total miles traveled, 59,963,231, of which, 50,113,681 were by 1st class passengers, the remainder by 2d class and emigrants. In 1861, the number of passengers carried was 803,702; and the mileage of passengers, 51,644,111.

The property of the company consists of—the main line, Jersey City to Dunkirk, 460 miles; Piermont branch, 18 miles; Newburgh branch, 19 miles; Buffalo branch, 60 miles—total, 557 miles. On the main line are 180 miles of double track, and on the main line and branches, 122 miles of sidings and switches—making in all equal to 879 miles of single track.

The Canandaigua and Elmira railroad, 66 miles in length, is operated under a lease, and is regarded in the accounts as part of the road of the company.

The Warwick Valley railroad, 10 miles, is operated under contract, this company receiving payment in a fixed sum for each mile run. This road is worked in connection with the Newburgh branch, the trains running through between Newburgh and Warwick.

The number of miles operated by the Company, is 633.

Ottawa Ship Canal.

The movements now making by the people of Chicago, to secure an uninterrupted navigation for their large vessels to tide water, are having the effect of exhuming many very valuable propositions to that effect. Of this class is the Ottawa Ship Canal, which would furnish water communication between Chicago and Montreal by the way of Georgian Bay. We copy the following interesting facts in relation to the project from the Montreal *Gazette*:

Some years ago an able report was presented by Walter Shanly upon the Ottawa Ship Canal. It was shown that the distances from Chicago to Montreal were as follows:

	Lake.	River.	Canal.	Total.
By the Welland Canal	1145	132	71	1348
" Georgian Bay	775	155	120	1050
" Ottawa Canal	575	347	58	980

Showing that the route by the proposed Ottawa Canal was 368 miles shorter than by the Welland, and 70 miles shorter than the Georgian Bay Canal; that the lockage by the

Welland Canal was	535 feet.
Georgian Bay	805 "
Ottawa	698 "

The estimates were based and the survey made upon the supposition that a Ship Canal giving a depth of ten feet of water throughout was required. At that time large undertakings were all the rage. There was also a general desire to see shipments made direct between Chicago and Liverpool. Now that economy has become fashionable, is it not possible to discuss a scheme by which the Ottawa Canal may be constructed at an expenditure within the bounds of possibility, and with a prospect of success?

The cost of canalling or improving river navigation increases in rapid ratio as we seek for increased depth. The report estimates the difference upon the proposed Ottawa Canal, between ten and twelve feet depth, to be at least five millions of dollars. It is also stated that the most serious difficulties to be encountered are upon the Lower Ottawa. This section covers more than one-fourth of the whole route, and embraces more than one-

third of all the canalling. But vessels drawing five feet of water can at present navigate the river from Montreal to Ottawa: By enlarging the locks, large craft drawing five feet of water could at present go as far as Ottawa. If we were to start with the idea of opening up navigation from Montreal to Lake Huron, a distance of 430 miles, for large canal boats drawing five feet of water, the cost of the undertaking would in all probability be reduced to the capacity of a chartered company.

At the mouth of French River on Lake Huron there is a good harbor. Here the cargoes of lake craft could be transhipped into large barges. Barges could be constructed having a light draft, and capable of carrying 13,000 bushels of grain. A number of these could be towed by one steam tug. There would then be no further transhipment until the barge came alongside of the sea-going vessel.

The returning vessels could take back cargoes of lumber which abounds in inexhaustible quantities, along the greater part of the route; and the Western merchant could import goods from Europe direct, to be shipped by this new route. Montreal, under this state of things, would become the *entre-pot* for the Great West. The great country lying in the valley of the Ottawa, would be opened up, and its material wealth developed by the hardy settler.

Baltimore and Ohio Railroad.

The regular monthly meeting of the Directors of the Baltimore and Ohio Railroad was held in Baltimore on the 11th inst. The following is a report of its proceedings:

The Committee of Finance presented a report for the action of the Board, in connection with semi-annual dividends.

The report exhibited an increase in the aggregate of the sinking funds from October 1st, 1860, to March 5th, 1863, of $624,516 90, showing also the investment of the entire accretions of these funds to April 1st proximo, inclusive.

It also exhibited the freedom of the Company from all floating debt, and its ability from its immediate resources for the payment of the usual semi-annual dividends on the main stem and the Washington Branch, which were accordingly declared.

It was stated that the bridges had escaped damage from the recent freshets; that the machinery and organization of the company are in most effective condition, and that the entire line of the road and its branches are in such order as to enable the company to accomplish its present results, the traffic and revenue being larger than during any previous period in the history of the company.

As indicating the vast business of the company with the West, it was stated that the revenue from freight and passengers passing over the main stem, in connection with but one of its feeders—the Central Ohio road—furnished, as the proportion of earnings to the Baltimore and Ohio Road for the single month of February, $136,500.

Information was also presented of the extensive, thorough and reliable military protection south of, and upon the entire line.

After the disposition of the subject of dividends the Board proceeded to consider the following preamble and resolutions, also recommended by the Committee on Finance:

Whereas, The Baltimore and Ohio Railroad Company is at this time the holder of $400,000 of the 4th mortgage bonds of the Central Ohio Railroad, secured by mortgage on its property, subject to prior mortgages thereon; that is to say—a mortgage on the Western division of the road from Columbus to Zanesville, for $450,000, and one on the Eastern division from Zanesville to Bellaire, for $800,000, which, covering as they do, the entire line, constitute the 1st mortgage thereon; a 2d mortgage for $800,000, covering also the entire line; a 3d mortgage on the same property for $950,000, making an aggregate indebtedness of $3,000,000, secured by mortgages having precedence to that under which the bonds held by this company are secured.

And whereas, Proceedings have been instituted in the Circuit Court for the Southern District of Ohio for the purpose of foreclosing the first and second mortgages aforesaid, which, if presented at this time, may seriously affect, if not absorb in the payment of the prior liens, the security which the company has for its claim of $400,000.

And whereas, This company is advised that it has the power, by paying the first mortgages the amount due to them to substitute itself in their place and stead to all intents and purposes, and in this manner to exercise a control over the proceedings in the said Circuit Court looking to a sale as aforesaid.

And whereas, It is desirable that this company should, if practicable, exercise such control as well for the security of the debt due to it, as for the purpose of preventing the Central Ohio Railroad from passing, at this time, into hands that might by possibility be disposed to use it to the prejudice of this company and of the city of Baltimore, by diverting trade and travel which, while the two roads continue to be worked in concert, may be reasonably expected to come to the said city.

Therefore, be it Resolved, That the Committee on Finance is hereby authorized to take such steps as may be necessary in their judgment to substitute this company in the place and stead of the first mortgagees aforesaid, paying to them the amount due upon their respective claims under the said mortgages, provided that such substitution and payment shall not be made until such measures are taken, or agreement entered into, as shall dismiss, or stay, proceedings to effect a sale of the mortgaged property by the second mortgages aforesaid, and estop them from paying off the first mortgage for the term of —— years from this time; nor until an agreement shall be completed that shall secure to the satisfaction of the said Committee on Finance the harmonious working of the Central Ohio and the Baltimore and Ohio Railroads, looking to the interests of the latter and the city of Baltimore, nor until the punctual payment of the interest on the first mortgage bonds aforesaid shall be satisfactorily secured.

The subject was very fully debated and the vital importance of preventing the road falling under the control of hostile interests was admitted by all participating in the discussion. Judge Crain, of the State direction, Col. Nicholas, of the stockholder direction, and James Johnson, Esq., of the city of direction, sustained the propriety of the action proposed.

Whilst the subject was under discussion an officer of the Circuit Court of Baltimore city appeared and served a writ in relation to the matter before the board, apparently under the demand of the Mayor and City Concils of Baltimore. Attention was called to the fact that the proceedings of the Second Branch of the City Councils indicated, that that body had refused to authorize the application for an injunction, but as a writ had been obtained, and as prompt action was deemed important, Colonel Nicholas moved the subjoined additional proviso to the resolution as stated:

"Nor before a further order of the Circuit Court for Baltimore city in the suit instituted in the said Court by the Mayor and City Council of Baltimore, against this company, be first had and obtained by this company, in the premises mentioned in the order passed by the said court on this day therein."

In the course of the debate, which continued for several hours, the President, Mr. Garrett, substantially remarked:

"That it must be a source of regret to the board, as it would doubtless prove to be to the community, that the Mayor and City Councils of Baltimore again appeared to attempt, by litigation, to interfere with the action of the Baltimore and Ohio Railroad in its proper and judicious efforts to protect great interests which it was the great duty of the Board especially and vigilantly to guard. The history of such interference heretofore it had been hoped would have prevented similar errors. The extraordinary course pursued by the Mayor and City Council of Baltimore in instituting a protracted and expensive litigation by procurement of an injunction against the Baltimore and Ohio Railroad to prevent the company from issuing the extra dividend, declared in 1850, and from paying the interest thereon, is still pointedly before the public. The Council at that time were urged by the Mayor, Mr. Swann, to adopt as a measure vital to the interests of the city of Baltimore, this hostile course.

Large sums were paid by the city in pursuing this litigation, and the company was for years compelled to defend itself from assaults as to the accuracy of its accounts, and its financial condition, emanating from an interest which should have been its leading support. Finally, the decision of the Court fully vindicated the integrity and accuracy of the accounts of the company, the correctness of the principal upon which the dividends had been declared and the wisdom of its declaration. The city, then, after the waste of its means and the means of its stockholders in worse than useless litigation, approved and accepted the dividend, and now the tax-payers of Baltimore have realized $1,050,000 of principal by that dividend, and have continuously the benefit of $63,000 per year for interest thereon.

"The relative knowledge of the affairs and interests of the company on the part of the Mayor and City Councils and of the board of directors, was, in this instance, signally illustrated. Has the city been so successful—has it exhibited so much wisdom and foresight in its legislation regarding other interests in internal improvements, that it should again seek to derange and interfere with the proceedings of this company by extraordinary means? We find it legislating away, with little or no practical consideration, its large interest in the Northern Central Railroad; and subsequently we see that gigantic and monopolizing organization, the Pennsylvania Railroad, step into the stock market of Baltimore, and for a relatively insignificant sum, purchase a sufficient amount of the stock of this same Northern Central Company practically to control its management; and what has been the result of this action?

"We further find that on the very day the Baltimore and Ohio road was closed for through business by the attacks of the enemy, that the Pennsylvania road ordered an advance on freight to Baltimore to the rates to Philadelphia, including points where this city possessed geographical advantages; and what further was the experience of our merchants in this crisis? The Pennsylvania Company not only charged these high rates, but refused, to a large extent, to furnish cars for shipments to Baltimore—endeavoring thus, to the largest practicable extent, to force the trade and produce from this city to Philadelphia. Another instance: When the stock of the Connellsville Railroad was being forced upon the market in satisfaction of judgments in favor of bondholders of Pittsburg and the Courts of Alleghany, the city of Baltimore was appealed to, but notwithstanding its large interest in the work, it refused to authorize the purchase, and the company acted for the benefit of this community, and itself received a controlling interest from a relatively small sum in that great and important enterprise.

"Has the city of Baltimore not especially direction in the Board? Is not the Board composed of the most able, eminent and intelligent citizens of Baltimore and of the State of Maryland! Do not the Councils study the subjects connected with these great interests more earnestly than the Board of this company, who take solemn oaths to act according to their best information and judgment? Unless they are wiser, more pure, and better informed gentlemen than the members of this board, with the fullest respect for them, (and he knew many members were entitled to the highest respect,) why should such extraordinary efforts at interference occur?

"It has been intimated that this unexpected opportunity has arisen from parties connected with the Northwestern Virginia Railroad. Can this be

possible? Do they recollect that whilst the city aided that company by endorsement for but $1,500,0000 the Baltimore and Ohio Company first endorsed $1,000,000, then $500,000, and has subsequently advanced in cash upwards of $200,000 to aid in its maintenance and completion. Can they take so limited a view of the interests of Baltimore city as to fail to know and appreciate that this city requires the Northwestern road for its Southwestern business; that the Central Ohio road is vital for the interests of the mercantile community and the general prosperity of the city, in connection with the great trade of Central Ohio, Indiana and Illinois? Do they fail to see that the Connellsville road must also be built for an independent connection with Pittsburg by the Northwest?"

The President also stated "that he had the fullest confidence in the decision of the court to which the Mayor has seen fit to refer the decision of the question. The board will desire nothing more than an examination of the whole subject by that impartial tribunal."

Other interesting and important views were presented justifying the action proposed, but want of time and space forbids us to present them.

At the close of the debate the vote on the preamble and resolutions was taken. The following was the result of the ballot:

Yeas—Messrs. Abbott, Beall, Burns, Colwell, Cheston, Dennis, Dunlap, Gregg, Hack, Harvey, Harwood, Heald, Hopkins, Johnson, Kirby, Mayer, Nicholas, O'Donnell, Smith, Taylor and Wilhelm.

Nays—Messrs. Armitage, Audoun, Corkran and Wood.

The resolutions were then declared carried.

In closing the report of these proceedings it may be remarked that the resolution of Colonel Nicholas, which delays all action in the premises until a decision of the Circuit Court is had, was adopted with great unanimity by those who were in favor of the report of the Finance Committee, and that a very general disposition was manifested to have the question heard and decided at an early hour.

The Board adjourned to the next regular monthly meeting.

A Petroleum Oil Company.

A new association has recently been formed in England, styled "The Petroleum Trading Company," with a capital of half a million of dollars, and power to increase to a million. The shares number ten thousand, at fifty dollars each, five dollars to be paid on application, and five more on allotment. The prospectus announces that "the Company have taken over the business of the largest importers, and the co-operation of the Atlantic and Great Western Railway is secured." The object is said to be to import into Europe the crude oil, chiefly from the Pennsylvania wells, to which end iron-tank vessels, especially built for the purpose, are to be used, two of which are now in course of construction. It is said that three refineries alone in England now require an annual supply of five millions of gallons, and that the demand is constantly increasing. The managing director, Thomas W. Kinder, Esq., has just returned home from America, and Mr. James McHenry is said to be engaged in the project. Something of the value of the Petroleum wells may be known from the following statements:

From a report published in a Pittsburg, (Pa.) paper it appear that not a barrel of petroleum had been landed at Pittsburg three years ago. Within that space of time 2,000,000 barrels have been delivered on the wharves of that city. The value of this quantity unrefined, amounted to $8,000,000; when refined $17,000,000; two-thirds of the quantity was refined in Pittsburg and its vicinity. There are 60 oil refineries in that city, in which 600 persons are employed, and which, in buildings and apparatus, represent a capital of $1,000,000. In these refineries 1,200,000 bushels of coal are, consumed annually.

Central Ohio R. R.--The Injunction Case.

On the 10th inst. a resolution was introduced into the City Council (Baltimore,) authorizing the Mayor to lay an injunction on the Baltimore and Ohio Railroad Company enjoining and restraining the officers thereof from investing any funds of said company in the bonds of the Central Ohio Railroad Company, in accordance with the resolution submitted at the February meeting of the Directors of the Company. The resolution, after being discussed at length, was rejected by a vote of ayes 2, nays 8. Notwithstanding this decided expression of the opinion of the Second Branch, Mayor Chapman, through the City Counsellor, John L. Thomas, Esq., made application in the name of the Mayor and City Council of Baltimore to Judge Krebs, for the issue of an injunction enjoining and restraining the Baltimore and Ohio Railroad Company from so investing the funds. The injunction was granted by Judge Krebs, and the writ served on John W. Garrett, Esq., President of the Company. As yet no day has been assigned for the hearing in the case.

In the City Council on the 11th inst., the following communication from Mayor Chapman, explaining the step taken by him, was received and referred to the Joint Committee on Internal Improvements.

MAYOR'S OFFICE, CITY HALL,
BALTIMORE, March 11, 1863.

To the Honorable, the Members of the First and Second Branches of the City Council:

Gentlemen—On the 11th of February, at a meeting of the Directors of the Baltimore and Ohio Railroad Company, a proposition was made to purchase for the Baltimore and Ohio Railroad Company the first mortgage bonds of the Central Ohio Railroad Company to the amount of $1,250,000. The proposition was referred to the Finance Committee. As soon as I became convinced that the purchase was likely to be made, I invited the Joint Standing Committee on Internal Improvements of your honorable body to a conference upon this and similar subjects. At the conclusion of the interview I asked to be empowered by the City Council with authority to enjoin the Baltimore and Ohio Railroad Company from making the purchase. In my interviews with different members of your honorable body I have been induced to believe that the delay in your action has been caused by circumstances beyond your control, and that a majority of your members are in favor of a measure so vital to the interests of the city. Yesterday I was informed the Committee on Finance would report in favor of the purchase at the regular monthly meeting of the Board of Directors, to be held to-day. These facts, and the advice of some of our most influential citizens, have induced me to ask the courts for an injunction preventing the Baltimore and Ohio Railroad Company from making this purchase, which I hope and believe will receive the approval of your honorable body. The first outlay required by this purchase (principal and interest,) it is supposed, will amount to $1,400,000, and in its train follow, second, third and fourth mortgage bonds, income bonds, and outstanding indebtedness, amounting in all to about seven million dollars. This large amount will ultimately be saddled upon the Baltimore and Ohio Railroad, if the purchase should be made. Is it fair that this immense indebtedness should be incurred to perfect the internal improvements of another State? The city of Baltimore is interested to the amount of one million seven hundred and seventy thousand dollars in the Northwestern Virginia Railroad, which is the "air line" to Cincinnati and is 56 miles shorter than the route about to be purchased. The city pays $90,000 yearly interest on this now; or, in other words, the tax-payers of our city pay $300 every day that the road fails to meet the interest. This route is now languishing for support, but I am informed that English capitalists, seeing the great advantages it possesses over every other route to the West, are about to invest largely in its securities, for the purpose of bridging the Ohio river at Parkersburg and putting the entire line to Cincinnati in good condition. The city is deeply interested in this road, and unless you should determine to foreclose the first mortgage, it were better to sustain it, instead of building up a rival road. I think that every effort should be made to complete and perfect internal improvements in which the city is directly interested, thereby relieving our citizens from the heavy load of taxation imposed upon them by works of this character.

With great respect, your obedient servant.

JOHN LEE CHAPMAN, Mayor.

After the reading of the message, Mr. Dukehart rose and observed that the subject was one of great importance, and it should be duly considered. The Mayor had taken on himself the responsibility to act in the case. In the communication he had referred to English capitalists investing their money in our stocks. For himself, he would express the pleasure he felt that they had done so, as it materially advanced the great interests of the country. He would move that a message be sent to the Second Branch proposing to refer the communication to the Joint Committee on Internal Improvements. The motion prevailed and the subject was by both branches referred to that committee.

Finances of New York County.

From the fourth annual report of the Controller exhibiting the receipts and expenditures of the County Government for the year 1862, we extract the following items of interest:

SUMMARY OF RECEIPTS.

Taxes, less $4,190,471 65, amount of corporation's proportion of the same	$4,784,754 58
General fund	69,165 70
Excise license fees	21,630 00
Temporary loans	2,505,750 00
New York County Court House stock	251,229 50
Total	$7,632,529 78

EXPENDITURES.

County officers	$604,049 41
Erection of county jail, new court house, Harlem Bridge	278,231 07
Police	1,739,712 00
Common schools, canals, militia and general purposes	2,212,930 34
Loans on county revenue bonds	103,769 09
Redemption county bonds	2,524,650 00
Support of the poor	23,664 00
Total	$7,487,005 91

According to the returns made to the Controller by the County Treasurer, the amounts paid to him in 1860-'61-62 for licenses granted by the Board of Commissioners of Excise were as follows: In 1860, $54,580; in 1861, $21,930; in 1862, $21,630; total $98,140. Of this amount $8,964 was paid to the Commissioners of Charities and Corrections—$79,362 to the corporation of the City, and $9,814 to the New York State Inebriate Asylum.

Of the new County Court House stock $450,000 was issued to the Commissioners of the Sinking Fund of New York, in settlement of the award made in favor of the corporation by the Commissioners appointed by the Supreme Court. $250,000 was issued to provide means for the erection of the building. Total, $700,000.

The annual return of the Commissioners of Taxes and Assessments shows that the taxable property in this county for the year 1862 was assessed as follows: Real estate, $399,556,404; personal estate belonging to residents, $161,685,-

344; non-residents, $10,780,687. Total, $571,972,435. These amounts, as corrected by the Committee on Annual Taxes stand: Real estate $399,551,314; personal estate, $172,416,031. Total, $571,967,345.

The report sets forth that, although the remedies for the collection of taxes appear to be very ample, there remained uncollected on Dec. 31, 1862, $5,789,149 72. For the twenty-one years previous to 1862, there were uncollected on personal estate, $1,901,556 33; real estate, $2,147,895 95. Real and personal estate in 1862, $1,739,697 44. Total, $5,789,149 72. The debt of the county appears from the report to amount to $760,000.

Connecting Railroad Lines.--Through Freight Contracts.

CONTRACTS BY RAILROAD COMPANIES TO CARRY FREIGHT TO PLACES BEYOND THE STATE OF NEW YORK HELD VALID. COMPANIES SO CONTRACTING ARE LIABLE FOR THE NEGLECT OF OTHER LINES IN NOT FORWARDING THE GOODS.

The case of Burtis *vs* the Buffalo and State Line Railroad Company now decided by the Court of Appeals of the State of New York, holds that the statute of 1847 (ch 270) enacted by the New York Legislature, making a company which owns a railroad connecting with one or more other roads, and receives freight to be transported to a place on the line of a road thus connected, liable as common carriers for the delivery thereof, applies as well where one of the connecting roads is wholly beyond this state, as where all are within it. The statute not only imposes the duty, upon the company undertaking it, of delivering the goods at the place of destination, but enables it to make a special contract for their delivery in a limited time.

On the 24th of October 1855, the plaintiff, a nurseryman at Rochester, agreed with the general freight agent of the defendant for the transportation from Buffalo to Chicago, of a large number of young fruit trees, which were designed, and the agent was so informed, for planting that Fall. The agent agreed that they should be delivered at Chicago in three days. The trees were transported to Chicago, but some of them were delayed upon the route for seven and eight days, and their value was destroyed by their freezing. The line of the defendant's railroad terminated at the western boundary of the State, where it connected with a railroad running to Toledo, in Ohio, which there connected with a third railroad running to Chicago, in Illinois. The three roads were owned and operated by distinct and independent corporations, between whom no co-partnership existed. The plantiff brought this action to recover compensation for the loss of his trees, on the ground that the defendant had failed to deliver them at the time they had agreed to by contract, the act of 1847 providing that whenever two or more railroads are connected together, any company owning either of said roads, receiving freight to be transported to any place on the line of either of the said roads so connected, shall be liable as common carriers for the delivery of such freight at such places.

The trial was had before a referee, who reported in favor of the plaintiff. Judgment was rendered on this report for $4,822, and this judgment having been affirmed by the Supreme Court, the defendant carried the case to the Court of Appeals. The following opinion was rendered at the decision of the case.

DENIO, J.—The effect of the finding of the Referee is, that Starke, the defendant's freight agent, had authority to make any contract for the transportation of property which the defendants could lawfully make by any instrumentality whatever. The language of the finding is, that said Starke was the defendant's acting freight agent, or master of transportation, and, as such, was authorized to receive property, to make contracts for such transportation, and to act as the general agent of such company in that department of its business. We are to intend that this determination of the question touching his authority was warranted by the evidence; as we are not allowed to review the case upon questions of fact. There is nothing in the finding to qualify the comprehensive language to which we have referred; and, as has been said, it embraces the power to make any contract for transpotation that the corporation had a right to make. The making of a contract by which the defendants, by Starke as their agent, undertook to transport the trees from Buffalo to Chicago in three days, and the breach of that contract is also established by the special finding of the referee. The single question remaining to be examined is whether the defendant's corporation had power to enter into such a contract. If we should deny the existence of that power it might then become a question whether the defendants could excuse themselves from the consequences of the breach of a contract actually made in their name, by their duly authorized officers and agents, on the ground that it was without the scope of their corporate power. That would require a re-examination of the points discussed, but not decided, in Bissell *vs* the Michigan Southern and N. I. Railroad Company; but in the view which I take of the case, these questions will not arise, for, in my opinion, the defendant had express legislative authority to make the precise contract upon which the present action was brought.

By an act passed in 1847 it is provided that, whenever two or more railroads are connected together, any company owning either of said roads receiving freight to be transported to any place on the line of either of said roads so connected shall be liable as common carriers for the delivery of such freight at such place. The act further declares that in case any such company (that is the company receiving the freight) shall be liable to pay any sum by reason of the neglect or misconduct of any other company or companies, the company paying such sum may collect the same of the companies by reason of who's neglect or misconduct it became so payable. (ch 270, § 9)

The defendant's counsel argues that the statute does not apply where the connection, as in the present instance, is between a railroad in another state, and one of our own roads, because the indemnity which is conferred upon the company which shall pay damages, against the delinquent company, cannot be enforced against a company in another state, it not being within the scope of our legislation or ameanable in our courts; and that, for the same reason, freight embarked on a foreign railroad, to be carried over a road in this state running in connection with it, is not within the protection of the act. Hence it is insisted that such inter-state lines of railroads are not within the perview of the statute. This reasoning though somewhat cogent, is not quite satisfactory to my mind. The act is eminently a remedial law, and should receive a liberal, as distinguished from a narrow construction. It was of course, known to the legislature that continous lines of railroad, connecting this with conterminous states, had been and would continue to be constructed. The largest commercial town and the most active seaport of the Union being in this State, it was, of course, apparent that a very large amount of traffic between this and the neighboring states would pass over these inter-state lines. The motives which led to the enactment of the law applied quite as strongly to such lines of roads as to those which had their courses wholly in this state. A considerable portion of all the merchandise sent by railroad from the city of New York passes into other states upon continous lines of railroads, such as those referred to in this act. I think it was not intended to impose the responsibility mentioned in the statute upon any of the railroads against the consent of the company owning them. The language is, that a railroad company, "receiving freight *to be transported*" to a place on the line of another road, shall be liable &c. This, I think, is limited to cases of a company reciving property and agreeing, expressly or by implication to carry it to a place on another connecting road. Should the company on who's road the property was first embarked, limit its undertaking to the line of its own road, the act would not apply, though it should be in course of transit to a place beyond its terminus, and should be directed to such place. The act, in my opinion, means that if a railroad company will agree to carry property beyond the terminus of its own road, and receive the goods under such an agreement, it shall be liable as a common carrier for the delinquencies of the road running in connection with it on the route to the place of delivery. Any other construction would make the company receiving the property liable for the fault of the connecting road, contrary to the contract between it and the owner of the property; which could not have been intended. Upon the construction suggested, the true sense of the act is that the company on who's road the property is first sent forward may agree for its transportation to a point on another road which connects with it, and that, in such a case, the first mentioned road shall be liable as a carrier for any breach of duty respecting the property, whether it happen on the other road or on its own; but, if it occur on the connecting road the owners of that road shall be responsible to the one which has become liable to the owner for the amount paid on account of such liability. The company receiving the goods may not be satisfied with the indemnity thus proffered, on account of the pecuniary circumstances of the company made liable, or because such company is not bound by the act, or not within the jurisdiction of our courts, or for any other reason; but, in either case, it may refuse to receive the goods "to be transported" to a place beyond its own line, and limit its engagement to carrying them to the end of that line and delivering them to the road next in order towards the place of final destination. Where, as in this case, there is an express contract to carry to a place on the line of another road, the case is within the spirit as well as the language of the act; and if the indemnity by action against the other company is not satisfactory, it is the fault of the party accepting it instead of limiting its contract to the

line of its own road. The legislature afforded all the indemnity which it was in its power to give; and it left the receiving company, free to contract in such manner, as to need an indemnity, or to refrain from so contracting. There is more difficulty in applying the act to a transit of property from another state into this, the company on which the goods are embarked not being subject to our laws in respect to a transaction out of our jurisdiction. It may be that the legislatures of the adjoining States, have provided or will provide, by similar legislation, for traffic originating in those states, but, however this may be, we can clearly establish the law for companies operating roads in this State. As to these, the question is one of construction, and not as to power; and I cannot see any good reason for holding that domestic roads, running in connection with roads beyond the state, should not be considered within the statute. There is another view of the case which seems to me satisfactory. The act assumes, by an irresistable implication that railroad companies may make valid contracts for the delivery of property at places on other roads beyond the route of their own. This is, itself, an answer to the defence of *ultra vires*, which is the only answer which can be interposed to this action.

Judgment affirmed.

Lehigh Coal and Navigation Company.

The provisions of the bill of this company recently enacted at Harrisburg, are as follows:

Section 1 authorizes the company to abandon the whole or any part of the upper section of their Slackwater Navigation. It also authorizes, but does not compel, them to construct a railroad from White Haven to Mauch Chunk, or between any intermediate points. Section 2 authorizes certain improvements to be made to the Lehigh and Susquehanna Railroad. Section 3 authorizes branches, not exceeding eight miles in length, to the Lehigh and Susquehanna Railroad, or to the railroad between White Haven and Mauch Chunk. Section 4 empowers the Company to borrow money for the purpose of constructing the improvements authorized by this act, and for repairing their works, and for the general purposes of their business, and to mortgage the improvements, property, and franchises of the Company as security therefor. Section 5 extends certain provisions of the general railroad law to the railroads above mentioned. Section 6 repeals so much of any previous acts as is altered or supplied by the present act. Section 7 provides that the act shall be submitted to a vote of the stockholders within sixty days after its passage. The principal advantage the stockholders are to derive from the act is supposed to lie in the Company being relieved from any obligation to restore any part of the navigation above Mauch Chunk, which they may deem it more to their interest to abandon. There is a considerable portion of the upper section which is understood never to have paid for the cost of keeping it up, and the Company will doubtless be glad of an opportunity of letting it lie as it is, with a number of its dams and locks in ruins, thus avoiding a large and profitless exenditure of money, and what has proved to be a fruitful source of danger to the navigation below.

At a special meeting of the stockholders of the company, held on the 16th inst., the Act of the Legislature, of which the above is an abstract, was formally accepted. "The effect," says the Philadelphia *Ledger*, "was an advance of the scrip of the company during the day from 37½ to 43½. This sudden rise is attributed to a rather obscure expression in the supplemental law, authorizing the company to make a three million mortgage on its works, property and franchises, and which is understood to include the existing mortgage due in 1870. If holders of the present 1870 mortgage bonds shall be willing to exchange them for a mortgage on the same property due twenty years hence, the difficulty that has heretofore stood in the way, of the conversion of the scrip into shares will be removed, and that much coveted consumation of scrip holders realized. As the present mortgage bonds are, however, protected by dividends limited to six per cent. per annum on a comparatively small amount of shares, bond holders will probably be careful how they give them up for anything not equally protected."

Victoria Gold Fields.

The amount of gold shipped during the year 1862, from Victoria was as follows:

By Wells, Fargo & Co.'s Express	$1,573,096 18
By Hudson's Bay Co.	50,208 00
By Bank of British Columbia	21,500 00
By Schloss & Livingston	187,000 00
By McDonald & Co.	335,379 00
Total	$2,167,183 18

It is stated that the shipments by private hands was one million more.

The yearly increase in shipments is as follows:

1858	$337,765 17
1859	823,488 41
1860	1,298,466 00
1861	1,340,395 72
1862	2,167,183 18
Total	$5,967,298 48

Leaf Tobacco.

The cultivation of leaf tobacco in Illinois promises to be one of considerable magnitude, and at the present price of the "weed" if the farmers take pains in the selection of the seed, the culture and the mode of curing, there is no doubt but it will add greatly to the material wealth of the country. The cultivation of this article this season has been purely of an experimental nature, and it ought not to discourage those growers, if their efforts have not proved altogether successful, as the proper management of the leaf in the State of "curing" is one that requires considerable skill and experience. We have made inquiries, says the Chicago *Tribune*, regarding the value of the article raised in this State, and find that the crop generally will average from 10@12c. per lb. There is an active manufacturing demand for Leaf Tobacco of all descriptions, and the current quotations here as follows:

Good to fine	12@15
Good common	9@10
Inferior	6@8

Railroad Earnings--Weekly.

The earnings of the La Crosse and Milwaukee Railroad for the week 1st in March, 1863,

were	$12,773 55
Same week, 1862	9,735 82
Increase	$3,037 73

The earnings of the Chicago and Northwestern Railway for the 1st week of March, 1863,

were	$15,922 01
Do., 1862	10,739 77
Increase (40 per cent.)	$5,182 24

The earnings of the Illinois Central Railroad for the 1st week of March, 1863, were

	$59,000 00
Do., 1862	39,000 00
Increase	$20,000 00

The land business is very flourishing, the sales of the first week being $28,000, and the cash collections $25,000.

The earnings of the Toledo and Wabash Railroad Company for the 1st week of March, 1863,

were	$24,280 89
Same week, 1862	11,857 03
Increase	$12,423 36

The earnings of the Galena and Chicago Union Railroad for the 1st week of March, 1863, were:

Freight	$17,323 82
Passengers	8,821 87
Mails	1,200 00
Total	$27,345 69
Same week, 1862	17,062 51
Increase	$10,283 18

The earnings of the Chicago and Alton Railroad for the 1st week of March, 1863, were:

Passengers	$11,021 95
Freight	11,796 28
Sundries	974 33
Total	$23,792 56
Same week last year	17,301 51
Increase	$6,491 05

The earnings of the Grand Trunk Railway for the week ending March 7, 1863, were:

Passengers	$19,201 55
Freight and live stock	48,265 31
Mails and sundries	3,500 00
Total	$70,966 86
Corresponding week, 1862	39,907 30
Increase	$31,059 56

The traffic of the Great Western Railroad for the week ending March 6, 1863, was as follows:

Passengers	$19,242 37
Freight and live stock	48,972 62
Mails and sundries	1,494 79
Total	$69,709 78
Corresponding week of 1862	49,184 50
Increase	$20,525 28

The earnings of the Michigan Southern Railroad for the 1st week of March, 1863, were

	$57,184 00
Same week, 1862	31,777 00
Increase	$25,407 00

The earnings of the Michigan Central Railroad for the 1st week of March, 1863, were

	$58,783 00
Same week, 1862	33,301 00
Increase	$25,482 00

The earnings of the Cleveland and Toledo Railroad for the 1st week of March, 1863,

were	$37,941 00
Same week, 1862	21,964 00
Increase	$15,977 00

The earnings of the Chicago and Rock Island Railroad for the 1st week of March, 1863,

were	$18,890 00
Same week, 1862	24,253 00
Increase	$5,363 00

The earnings of the Milwaukee and Prairie du Chien Railroad for the 1st week of March, 1863,

were	$9,635 29
Same week, 1862	10,710 20
Decrease	$1,074 91

American Railroad Journal.

Saturday, March 21, 1863.

Stock Exchange and Money Market.

The Money Market has become quite easy. The brokers are fully supplied at 5 per cent. Debt certificates 6 per cents. old issue, sell at 99⅞ and the new at 97. It is very evident the Government indebtedness may temporarily at least, be provided for with these popular certificates, and it is the opinion of many of our ablest financiers, that this is the best shape in which a greater part of it may be now liquidated. Government 6's, 1881, sell for 103¾ registered, and for 104¼ coupons. The 5's of 1874, go off freely at 98, $100,000 of them were taken at that figure on Tuesday to fill a single foreign order. Gold and exchange are dull, the call for them assuming a legitimate form and consequently being of a less speculative character. While fair and honest business operations are in no way shackled by the action of Congress, or likely to be by that of the State Legislature, the parties who hawk about mere Bank certificates in place of the gold itself, and make one dollar in such paper falsely represent hundreds of the real article, are driven back to first principles, and must repose on the bed of their own making.

Neither commerce, nor legitimate finance, nor real capital, nor honest negotiations suffer under the present arrangement, while the public and the treasury are largely gainers by the change.

There is no question that many foreign orders are being constantly received for investments in our public securities, and are quietly filled. Some

bankers attribute the circumstance, to the prompt payment in coin of the Government loan which fell due in December; others suppose, the firmness and persistency which have been shown by the Government in carrying on the war, the promptness and cheerfulness with which the people have responded to the call for money, and the convenience with which the taxes are paid, are the real causes of the returning confidence of observant foreign capitalists.

Is is understood with very probable truth, that the Secretary of the Treasury received by the last steamer offers for a large amount of Government sixes. It is said the offer is to the extent of one hundred millions. It has hitherto been his wish, and so far his policy, to avoid having recourse to foreign loans, for many obvious reasons of a financial and patriotic character. But there seems to be at this moment very strong inducements to listen to this last offer. The introduction of a hundred millions of gold into the country, would furnish an equipoise to the currency now afloat, and bring paper and specie almost to an equality of value. It would act decidedly upon exchange by reducing the price of gold, and so lower the prices of commodities to consumers. These pay their taxes, which they can reckon to a dollar without great disturbance, but when every article of necessity in daily use is pushed up to a price corresponding with every rise of exchange in Wall street, when a commodity is one day worth only a dollar and the next day is raised to two, then it is the real inconvenience of the war is brought home to every man's pocket. The direct tax we can bear, but to be charged and overcharged at every shop and market one deals at, on the ground of the rise in exchange, and the speculations in gold is vexatious in the extreme.

Mr. Chase might therefore well be excused for making a foreign loan, if it would bring back prices to something of their former rates, and lessen the cost of living. To sell, however, any of our long loans to foreigners at the value of gold by the quotations in currency, would not be admissible. It would be a depreciation by the Government of its own paper, when it has never been obliged to submit to any as yet, and need not, as long as it can obtain coin at 4 or 5 per cent. interest; and is receiving large amounts from customs.

If the Secretary has the power he might make some of his bonds, payable principal and interest in London, in American dollars at the rate per oz. ruling there at maturity. These would not in form be sterling bonds, though equally as tempting to foreign capitalists. Probably, however, his correspondents are getting so much confidence in American securities, that no formal arrangement will be necessary. Their obvious interest is to come directly into the New York market and buy at once at currency prices, with gold at its present premium. These securities after all are just as good and just as sure to be paid as sterling bonds so called. And this fact cannot be denied, that gold can obtain for itself in this country at this moment more in grain, flour, provisions, stocks, houses and lands, indeed in all American products, than it can command in any other part of the world. Foreign capitalists cannot but see this, and when they see it, will act accordingly.

Various rumors have been circulated by the newspapers in regard to the Secretary's recent visit to this city. We are quite sure many of them were entirely unfounded. Mr. Chase was not present at any meetings of bank officers. These gentlemen met three times on their own motion to discuss their own position and arrange their own plans of action. Mr. Chase only saw one President of a bank, and him quite informally and not as a representative. He left as suddenly as he came.

The banks are without doubt much disturbed at the probable operations of the Government banking bill. They are loyal and ready to support the country to their last disposable dollar, but they think they should not be driven to the wall, and overlooked as Government agents, when they lend the Government at every pinch, and are ready at every emergency.

Should, therefore, Mr. Chase commence afresh to negotiate with them, we imagine he will meet with unexpected reserve. But notwithstanding, we have no doubt our finances will bear every thing through. Our trade is large, our exports show a balance in our favor, our revenue and customs income is unexpectedly assuming immense volume, the production of the country continues to be enormous, and there is a general impression everywhere, *even in the South* that the Union is to be restored. Foreign intervention is now very improbable; the British Government has heard from the people of England, and France finds its European as well as Mexican complications very serious. We sincerely hope that our Southern brethren for such they are, will therefore throw down their arms and come back to their allegiance. They can never be happy again except under the old flag, with one soil, one destiny.

We quote in another column from the *Circular* of Samuel Hallett & Co., which this week is engaged in placing before the financial world at a glance, the rapid growth and the substantial greatness of our sister State Ohio.

The Baltimore and Ohio Railroad Company has declared a dividend of three per cent. on the stock of the Main stem for the half year ending on the 31st instant. Also, a dividend of 4½ per cent. on the stock of the Washington branch for the half year ending the 31st inst. Both payable at the Merchants' Bank of Baltimore on and after the above date.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Long Island Railroad.

The annual statement of the Long Island Railroad Company for the year ending September 30, 1962, is as follows:

Capital stock as by Charter		$8,000,000 00
Amount paid in		1,852,715 79
Funded debt	$782,462 31	
Floating debt	15,212 73	
Cost of road and equipment		2,928,174 56
Length of road	98 miles.	
Number of passengers carried in cars	383,883	
Number of tons of freight	96,498	
Expenses of maintaining road		57,821 26
Expenses of repairs		30,120 58
Expenses of operating road		85,754 54
Dividend		45,000 00
Interest		42,811 25
Rent, sinking fund, &c.		12,723 83
Thompson's bonds and interest		48,679 75
Receipts	294,537 92	

In commenting on this statement the Philadelphia *Ledger* says that the figures do not give a correct view of the company's affairs, that there is no floating debt, and that "Thompson's bonds" are not chargeable to current expenses, but were paid off from funds previously accumulated for that purpose. The receipts being $294,537 92, and the expenses $173,696 38, the balance net, $120,840 54, is applicable to interest on funded debt and

will allow a dividend of six per cent. The road is a very important one to the public of Long Island, and has largely increased the value of property within its reach and influence. In the opinion of many persons, if this railway had a few connecting branches with the North shore, villages and landings, its business would be very largely increased. The tendency of population is rather towards the Sound, than the Ocean.

Paye's Patent Forge Hammer.

Among the numerous improvements which the application of steam has introduced, is that of the forge hammer. The inventions of Nasmyth and Condie are in general favor abroad, and are well known, if not adopted extensively in this country. To have a hammer perfectly at command, to make its blow adjustable in stroke, and variable in power at the pleasure of the operator has been the great desideratum. The patent of Mr. PAYE has met this want, and his hammers are being constructed to a large extent at the Ames' Iron Works, Oswego, N. Y.

The proprietor, being desirous of introducing these hammers into new localities, will furnish them to responsible railroad companies in want of them. They can set them up and give them a fair trial, and if they do not prove to be all that can be expected and entirely satisfactory, the proprietor will take them away, and the company need be under no obligation to buy them.

A drawing of this hammer may be seen by referring to an advertisement on its appropriate page of this JOURNAL.

Air Light.

The invention of Dr. Smith, of Rochester, fully described in a former number of this JOURNAL, is attracting attention in England.

Marquette and Ontonagan Railroads.

The Legislature of Michigan has now before them the conflicting claims of two railways known popularly as the Marquette and Ontonagan. In 1852, parties in Rochester, Ely & Co., and associates, commenced a railroad from Marquette to the Lake Superior mine, of 16½ miles in length, called the Iron Mountain Railroad. In 1857, the same parties organized the Bay de Noquet and Marquette Railroad Co., and obtained the land grant for it. In 1858, the two roads were consolidated, under the last named title, and the route was opened for travel and freight. The stockholders own also the principal mines.

In 1857, some prominent capitalists of Michigan formed a competing Co. to build a railway along side and parallel with the Iron Mountain Road and styled it the Marquette and Ontanagan Railway Co., but they never constructed the portion necessary to secure their land grant, and this expired on 1st January, 1863, while the charter was to June 3, 1866. In this state of things, no road being built, Ely & Co., and their associates revived the scheme on their own account by obtaining a new charter under the same name as that of the expired company, and have applied to the Legislature for the land grant, and permission to extend the road to L'Anse bay. Thus on paper and in law there are two Companies of the same name.

The two sets of Managers are therefore before the Legislature, both seeking the land grant forfeited, and asking, the one for extension of time or compensation, and the other to assume the place of the unconstructed road, and for the an extension to L'Anse bay. Various projects of compromise and arrangement are under consideration.

Norwich and Worcester Railroad.

The receipts of this company for the years ending November 30, 1861 and 1862, have been as follows:

	1861.	1862.
From passengers	$108,899 60	$141,868 26
" freight	166,044 54	196,320 50
" mails, express, etc.	13,568 08	15,476 14
	$288,512 22	$353,654 90
Expenses, viz:		
Repairs of road	$28,153 19	$33,914 55
" bridges	556 44	555 50
" locomotives	12,977 49	20,762 57
" cars	30,524 38	21,249 25
" tools	2,346 14	2,332 57
" station hous's	3,448 61	3,218 60
Fuel	27,889 12	30,329 46
Oil and waste	4,049 84	3,773 01
Passenger expenses	19,709 82	21,050 25
Freight "	31,379 45	36,868 83
Salaries	6,000 06	6,000 00
Taxes and insurance	1,684 01	4,905 05
All other expenses	11,168 22	9,787 98
	$179,886 71	$194,747 62
Net receipts	$108,625 51	$158,917 28
Interest paid	40,712 14	37,981 26
Balance	$67,913 37	$120,936 02

DEBTS OF THE COMPANY.

Massachusetts Loan, due July 1, 1879, at 6 per cent.	$400,000	
Less sinking fund	95,000	
		$305,000 00
Bonds for dividend scrip, at 7 per cent. due 1864 and 1874		100,000 00
Steamboat bonds		200,000 00
Loan from Norwich Saving Society, $5,000 to be paid annually		80,000 00
Note to Jedediah Huntington		19,300 00
Bills payable		300 00
Accrued interest, not due		5,639 51
Dividend scrip outstanding including interest		31 38
Unpaid dividends not called for		3,065 00
Balance due to individuals and companies		262 05
Total debt of the company		$713,597 94

ASSETS OF THE COMPANY.

Cash, notes and balances due the company	$81,804 16
Steamboat stock and interest	214,100 26
Inventory of wood, iron rails out of track, and other materials paid for.	39,122 10
Surplus real estate not needed for the company's use, cash value	19,545 88
Interest in steam-tug Wellington	1,600 00
Balance	357,425 54
	$713,597 84

The engines, cars and machinery owned by the company are valued at this time at $278,486 85.

The Territory of Arizona.

Arizona, just organized as a Territory, contains 120,000 square miles, and is therefore larger than three States of the size of Ohio. It is said to contain more and richer silver and copper mines than any Territory under the government. Gold is also found in many parts of the Territory. Hostile Indians have heretofore prevented extensive operations in the mines, but with a government such as is about to be established, they will be fully developed. There are 1,500 troops now there, and it is probable that the number will be soon largely increased.

Indianopolis and Madison Railroad.

The holders of the second mortgage bonds or income bonds and dividend scrip certificates of the late Madison and Indianopolis road, and of certificates of fractional shares, will have to surrender the former, and convert the latter with full shares previous to the 31st inst. to entitle them to participate in the earnings of the road for the current year. Holders of the first mortgage bonds are notified that the accounts of the purchasing agents will be closed on that day, and that thereafter all outstanding bonds will be excluded from the benefit of the agreement.

Eaton and Hamilton Railroad.

The Board of Directors of this Company organized on the 10th ult., by electing the following officers for the ensuing year:

JOSEPH TORRENCE, (of Cincinnati,) *President.*
DANIEL MCLAREN, (of Cincinnati,) *Sup't.*
E. W. MCGUIRE, (of Eaton,) *Secretary, Treasurer and General Ticket Agent.*

The Superintendent has appointed MR. L. WILLIAMS, Resident Superintendent, with his office at Richmond, Indiana.

Albany and Susquehanna Railroad.

C. W. Wentz, Esq., Chief Engineer of this road, in a letter published in the Binghamton *Standard*, says:—As to the prospects of our road, I have to inform you that it was never in a fairer way than at this time. Our Directors are so much encouraged that they are going to put the balance of the line to Oneonta under contract during next summer. If we should get State aid, we shall be in a position to go on rapidly; and we shall expect to put work under contract near Binghamton before the year closes.

Wyoming Canal Company.

The Wyoming Canal Company of Pennsylvania, having failed to pay the interest on their debt due the State, amounting to $281,000, and also the interest on their debt due other creditors, secured by a mortgage dated June 24, 1858, the holders of the bonds secured by this mortgage instituted proceedings for the sale of the canal, which were stayed by the Attorney General, and the canal placed in the hands of a receiver.

The bill before the Senate to enable the Company to compromise with its creditors, provides that as soon as the holders of two-thirds of the bonds, exclusive of those held by the State, shall consent, and the Company shall reduce the aggregate amount of said bonds to $750,000 and pay to the Commonwealth and other holders thereof all the interest due and in arrear on the 15th of January last, except one coupon of three per cent. to be released by the bondholders and cancelled, the stockholders are authorized at any time within three months to organize a new company with a capital stock of $400,000 by the name of the Wyoming Valley Canal Company. The capital stock is to be issued to the stockholders of the Wyoming Canal Company upon their surrendering stock of the old company in the proportion of two shares of the old for one share of the new; and upon the surrender of two-thirds of the stock of the old company, all the property of the company now in the hands of the Receiver shall merge in the new company.

The State of Ohio.

Before the breaking out of this wicked and causeless rebellion, there was never seen on the surface of this globe such a confederation of happy and prosperous States as formed the American Union. Never such a spectacle of combined enterprise, industry and prosperity. Never did art or nature put together such materials for the achievement of national grandeur. How unfortunate, to say no more, that the ambition, want of sagacity, and misdirected talent of a few excited men should have jeoparded for a moment so sublime a structure. One of the most important of these States, and which has contributed its full share to the national stability and nobleness, is Ohio.

With an area of about 40,000 square miles, far greater than that of some of the oldest and most celebrated kingdoms of Europe, twice the size of Portugal, Belgium, Holland, Bavaria, Denmark, and many of the States of Germany, with a present population of 2,339,050 souls, with a climate, whose average annual temperature is 52°, with twenty millions of acres under profitable cultivation, with vineyards fast rivalling those of France and the Rhine, with more landholders than in all the cotton States, a soil rich, inexhaustible, and cultivable to the very hill tops, with coal beds and salines which furnish millions of bushels respectively at low prices, and with outlets natural and artificial for the transportation of all its surplus from its fields, forests, mines, and machinery, Ohio may justly be considered one of the grandest of the States. It has a coast upon Lake Erie of 150 miles, and good harbors upon it at convenient intervals, such as Maumee and Sandusky, Huron, Fairport, Ashtabula, Toledo and Cleveland, this latter, one of the most flourishing and beautiful towns in our country. The river which gives its name to the State, and was known to the French in their early explorations on this continent as *la belle riviere*, laves its southern boundary for more than 900 miles, navigable the greater part of the year for steamers of the largest size, and is fed by numerous confluents alike navigable for scarcely less smaller craft. Its chief city, Cincinnati, the largest west of the Allegheny mountains, with railways and canals diverging from it in all directions, and a trade that almost defies an estimate, may well challenge comparison with its sister cities on the Atlantic coast. In 1800 it began its career with 750 inhabitants, and to-day has a population of more than 160 thousand. Compared with the progress of our own city, it has far outstripped her. In 1696, almost two hundred years ago New York had 4,302 inhabitants, and in one hundred years afterwards had but little more than 33,000. While Cincinnati has in the short space of 63 years reached the enormous extent of 161,044.

A comparison of the increase of the progress of the population of the two States would exhibit the same astonishing rapidity of increase. This may be seen by a reference to the following table:

Population of New York.		Population of Ohio.	
1701	30,000	1788	47
1790	340,120	1798	3,000
1810	959,049	1810	250,000
1820	1,372,812	1820	581,434
1830	1,918,608	1830	937,903
1840	2,428,921	1840	1,519,467
1850	3,097,374	1850	1,980,329
1860	3,851,651	1860	2,377,917

So with regard to canals and railways, Ohio at once adopted the policy of New York in relation to works of internal improvement, and it was under the eye of De Witt Clinton the first spade was put into the ground to connect the waters of Lake Erie and the Ohio River. Her canal system is now in full activity for 997 miles, comprising six main canals and river improvements. Her railways extend in all directions for 3,230 miles, while in New York enterprise we have with all our wealth but 2,600 miles!

Nor is it in the cultivation of her material interests that Ohio has alone distinguished herself; she has exhibited the same consideration and forecast in her system of education, her humane, liberal and scientific institutions, indeed in all those social arrangements which constitute the refinement and comfort of civilization, wealth and progress.

And even under the pressure of this unholy war, and the interruption of a portion of her most lucrative commerce by the route of the Mississippi, Ohio "moves right on" with the same industrious persistency in the path she has laid down for herself, and continues to prosper. From the report of her Commissioner of statistics—for the State is wise as well as powerful, and keeps her legislators constantly advised of her material progress—we learn some interesting facts which are of great value in the estimate of our general resources and national advancement. The number of new structures erected during the year 1862, is equal to the average of the last five years. The average of mortgage debts is five millions less than the average of preceding years, and private debts generally are rapidly decreasing. The current debt has actually been diminished the last year ten millions of dollars.

An increasing ability to sustain the burthen of the State and General Government is ascertained by the important fact, that the total amount of tax for all purposes levied in Ohio in 1820 was $117,000, while in 1862 the amount contributed by the people was $8,000,000. Nor is her credit in the stock market doubtful, when her 6 per cent bonds command 118 in Wall street. The products of her soil alone, are estimated at eighty millions of dollars, and her canals and railways are worked to their utmost capacity.

And although she has contributed one hundred and sixty thousand men to the army, and mourns the loss of many a gallant son, yet neither the progress of production nor the increase of wealth has been visibly retarded.

What a career! In 1788 a company of forty-seven individuals landed at the spot where Marietta now stands and commenced the first settlement in Ohio. In 1802 it was created a State out of the North Western territory, in 1790 it had but 3000 inhabitants, and to-day it has a population nearly as great as our own. What a subject for reflection! Why has this wondrous progress taken place in the course of two generations, so contrary to all European history and experience, except that it has been the sole effect of our free institutions, planted by the hand of Providence, on a continent, fresh and unpolluted by antiquity.

We have assumed here in New York the title of the Empire State, but if there be an Imperial seat, it is shared by Ohio, the younger in age, but the quickest in development, and the most rapidly matured. We have been hundreds of years reaching the pedestal on which we stand, with direct and constant aid and intercourse of transatlantic origin, while Ohio, pressing to the Western Frontier has of herself built up her own ramparts, and is one of the most powerful, and one of the noblest of the outworks of the Nation. May the time soon arrive when sober conviction shall resume its place in the hearts of our misguided Southern brethren and cure the insanity of the thought to separate themselves from kindred and not unfriendly states, whose strength, prosperity and friendship were always a guarantee of progress and peace.

Nor is this slight sketch of this great Western republic, fitted only for American contemplation and study. The liberal and observing foreigner may here see what can be accomplished in the space of an ordinary lifetime, by unshackled industry and proper incentives.

And what must the men of commerce and of finance abroad think—if they will but take the trouble calmly to reflect upon it at all—of a country composed of such states as Ohio, literally the growth of two generations of men. And what more, when they know that the freight which they consign there from the docks of Liverpool or London, may be taken from the ship, with bulk unbroken and carried to Cincinnati on the Ohio river, over a six feet gauge Railway in a few hours. Ohio is far nearer the old world than the old world thinks, and if it but knew its own best interests and those of humanity, even without any other consideration, would it not see, that in all the globe there is no such field for an intelligent interchange of products and of kind offices, as is offered to them in these United States, for such we are again to be beyond all question.—*Samuel Hallett & Co's. American Circular.*

Public Debt of the United States.

The annexed statement of the public debt of the United States is from *Thompson's Bank Note Reporter:*

Sixes of 1867	$9,415,250
Sixes of 1868	8,908,341
Fives of 1874	20,000,000
Fives of 1871	7,022,000
Fives of 1865 (Texas Indemnities)	3,461,000
Sixes of 1881	68,485,000
Sixes of 1881 (Oregon war loan)	1,022,000
6 per cent. 2-year Treasury Notes, say	2,500,000
7 3-10 3-year Treasury Notes	140,000,000
Sixes, called 5-20 bonds, say	25,000,000
Certificates of Indebtedness, say	145,000,000
Certficates of Deposit, say	75,000,000
Demand Notes, say	3,000,000
Legal Tender Notes, say	260,000,000
Total	$768,763,591
We should estimate that it will take to meet all unpaid claims, say	100,000,000
Grand total at March 1, 1863	$868,763,291

To meet the outstanding claims and current expenses of the Government, and to pay the Certificates of Indebtedness (fifty millions of which fall due between now and July 1st,) the Secretary of the Treasury can issue as follows:

140,000,000 Legal Tender Notes.
400,000,000 Treasury Notes, at not more than three years, nor over 6 per cent. interest.
900,000,000 of Stock (less any amount of the foregoing $540,000,000 Treasury Notes that may be outstanding), at not less than ten nor more than forty years, and not over 6 per cent. interest.

The power to issue Certificates of Indebtedness and Certificates of Deposit still continues, the former at 6 per ct. and the latter at 5 per ct. but no interest on these issues made after this date will be paid in gold, while like issues, dated prior to the 2d inst., will draw interest in gold.

Connecticut and Passumpsic Rivers R. R.

The St. Albans *Messenger* says that the Passumpsic railroad is progressing rapidly from Barton toward Newport, and the cars will run to the latter place by the 4th of July. Two long bridges are being built across the lake, with a steamboat wharf, the piles being driven by steam power.

Pork Packing in Cincinnati.

Though the business of slaughtering hogs was closed in this vicinity nearly a month ago, it was not until yesterday we were enabled to obtain the returns from all the packers; and even then there was one house refused to furnish us with the actual number it packed; but we nevertheless have been able to ascertain the number put up in that house, as nearly as it is necessary to know. The footings up of these returns show that the whole number packed was 598,457; the average weight 203 lbs., and the average yield of lard per hog, 25 21.23 lbs. A few of the houses were not prepared to furnish the yield of lard, and some three or four the average weight of hogs, but enough was given to enable us to ascertain both as nearly as is necessary. The average weight and yield of lard are considerably below those of the previous season, and less than that of 1860–'61. The averages for the last four seasons compare as follows:

	Av. weight, lbs.	Yield Lard. lbs.
1859–60	189	23
1860–61	221 5.35	28 9.16
1861–62	224 23.24	29 5.18
1862–63	203	25 21.23

These figures show a falling off in lard, as compared with last season, of 11½ per cent., and in the weight of the hogs, 11 per cent. The packing statistics of our City are now extended to a period of 32 years as follows:

Years.	No.	Years.	No.
1833	85,000	1849	410,000
1834	123,000	1850	393,000
1835	162,000	1851	334,000
1836	123,000	1852	352,000
1837	103,000	1853	361,000
1838	182,000	1854	421,000
1839	190,000	1855	355,786
1840	95,000	1856	405,396
1841	160,000	1857	344,512
1842	220,000	1858	446,667
1843	250,000	1859	382,826
1844	240,000	1860	434,499
1845	196,000	1861	433,790
1846	205,000	1862	474,467
1847	250,000	1863	598,457
1848	475,000		

The following table shows the average price of hogs each of the last ten seasons:

1853–4	$4 44¼	1858–9	$6 59⅛
1854–5	4 45¾	1859–60	2 21⅛
1855–6	6 04¾	1860–61	5 97
1856–7	6 23¾	1861–62	3 28 4-5
1857–8	5 16½	1862–63	4 35

—*Cin. Price Current.*

Railroads in Ohio.

The Little Miami Railroad Company has secured the control of the Dayton and Western Railroad, and will take possession of it on the 12th of April next.

The Cincinnati, Hamilton and Dayton Railroad Company has leased the Dayton and Michigan Railroad, and the Little Miami Railroad Company has under consideration the propriety of leasing the Sandusky Railroad.

Population and National Debt.

A recent number of the *Journal of the London Statistical Society* gives the following Statement of the population and public debt of various countries in Europe:

	National Debt.	Population.	Per head.
Great Britain	£800,000,000	29,000,000	£17.11.00
Netherlands	91,000,000	3,500,000	25.14.00
France	881,000,000	39,500,000	9.12.00
Spain	108,000,000	14,500,000	7. 8.00
Portugal	28,000,000	4,000,000	7.00.00
Austria	239,000,000	35,000,000	6.17.00
Denmark	12,000,000	2,500,000	4.16.00
Prussia	42,000,000	18,000,000	2. 6. 8
Russia	231,000,000	75,000,000	3.11.00
Sweden	1,700,000	3,700,000	1. 9.00
Norway	1,500,000	1,500,000	

Mississippi and Missouri River Railroad.

This road is to be completed in the course of a month or six weeks from Davenport to Grinnell, a distance of 125 miles. The road connects with the Eastern railroads by the bridge across the Mississippi at Davenport, and the recent decision of the Supreme Court of the United States, allowing the bridge to stand, has raised this road much in the estimation of capitalists. It has a superior entrance to the Platte Valley, from its western terminus at Omaha and Council Bluffs, and is ambitious (with a reasonable prospect of success) of being the main extension eastward of the Pacific railroad. In addition to the main line of the road, it has a branch from Milton Junction via Muscatine to Washington, 50 miles in length.

☞ It is proposed to construct a railroad from Syracuse to some point on the Rome and Watertown Railroad in the vicinity of Kasoag, or Sand Banks. The distance by rail to that point now is over seventy miles, while by the proposed road it is less than thirty-five miles. The route lays through a level and well timbered section of country. It would open a direct route between Ogdensburgh and Binghamton, or rather between the northern and southern portion of our State, and a route for travel between northern New York and the west that now either goes through Canada, or by the way of Rome, from thence west.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is **a superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104 Wall st.**
The above CEMENT is used in most of the fortifications building by government. 45

FINK'S PATENT IRON RAILROAD BRIDGE.

THE undersigned is prepared to manufacture and build in any part of the United States and Canada, at reasonable terms, FINK'S PATENT IRON BRIDGE in spans from 20 to 300 feet. The same is favorably known, well tested and already extensively introduced, is stronger and more economical than any other Bridge now in use, requires no repairs, and no adjustment, but is perfectly adjustable. For plans and particulars apply to

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & CO., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT REOILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.

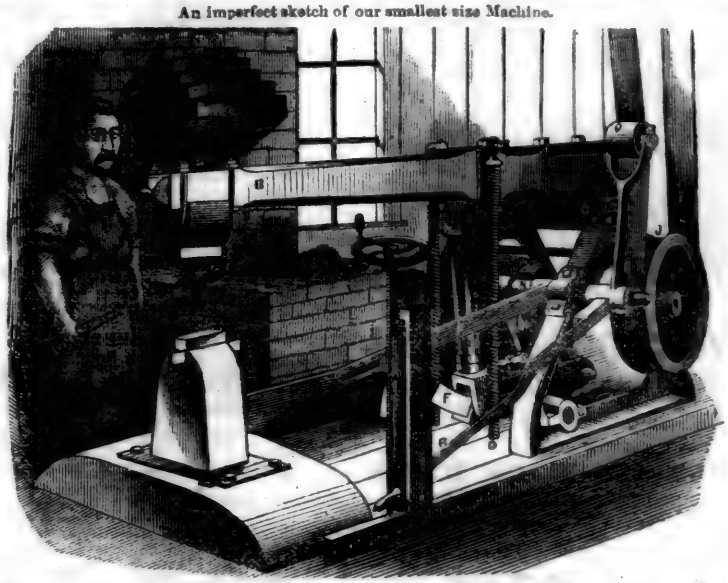
Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past ten years, with uniform success, they confidently offer their services to those requiring such aid.



VENTILATION.

THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS**, etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

Address **HENRY RUTTAN,**
Coburg, Canada.

AMES IRON WORKS,

An imperfect sketch of our smallest size Machine.

PAYE'S PATENT FORGE HAMMER. A HAMMER ADAPTED TO BOTH HEAVY AND LIGHT FORGINGS, with an adjustable stroke of from one inch to three feet. This hammer is adapted to both heavy and light forgings; the force of the blow being entirely at the will of the operator, and for all forgings under six inches, either round or square, is the best hammer now in use, and requires but one-half the power used by every other hammer to do the same work. For an engraving and description of this hammer, see page 1, Vol. V (new series) of the SCIENTIFIC AMERICAN; some valuable improvements have, however, been since made. All communications should be addressed to H. M. Ames, Box 422, New York, or Ames Iron Works, Oswego, N. Y.

These hammers may be seen in operation at the Allaire, Neptune, Secor, Delamater, Fletcher & Harrison, Duncan & Cramnton, Anderson & McLaren, Duhurst & Emerson, Charles T. Porter, all in New York City; Joseph Colwell, Jersey City; Wm. White, Newark, N. J.; Providence (R. I.) Tool Co.; Whiting & Wilcox, Kaigh's Point, Phila.; Mallory & Cottrell, Mystic, Conn.; J. An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house, it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, 25 cents, Brass, 31 cents; Silver-Plated, 50 cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of **$1.25.**

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

Walla Walla Railroad Company.

We publish below, an interesting communication from the pen of Capt. John Mullan of the U. S. Army, on the subject of the proposed Walla Walla Railroad, for which a charter is obtained, and to which he invites subscriptions. We publish also in connection with the letter, a copy of the Act of Incorporation.

—

215 "F" STREET, WASHINGTON, D. C.
March 20th, 1863.

The undersigned—who for the last five years has had charge of the construction of the military road from Walla Walla on the Columbia River in Washington Territory to Fort Benton on the Missouri River in Idahoe Territory, having been appointed Commissioner by the Body of Corporators of the Walla Walla Railroad Company, at a meeting held at Walla Walla, W. T., on the 1st day of January, 1863, to solicit subscriptions to the capital stock of said company, desires to state—that this company was duly chartered by the Legislature of the Territory of Washington with the power and privilege of constructing and maintaining a railroad from the city of Walla Walla to Wallula on the Columbia River.

Wallula is a point of debarkation on the Columbia River for the line of steamers that run on the upper Columbia, and except for a limited period of the year is the highest point practicable for steamers. Walla Walla is in the centre of the Walla Walla Valley, and distant from Wallula thirty miles. The object of the construction of the road is to complete the line of steam communication direct from San Francisco to Walla Walla, which will be effected and every mile traveled by means of steam. When this line is completed, Walla Walla will then become the commercial centre which will supply the large and rich mining region recently discovered in Eastern Oregon and Washington Territory. For sixteen miles, the road passes through a beautiful and rich section of the Walla Walla Valley, which is now thickly settled, and where the valley is so level that it is already prepared for the railroad ties, and where too the grade in no case will exceed twelve feet per mile. The remaining section of fourteen miles will involve moderate cuts through clay hills and the construction of three bridges. The entire road work of preparing road bed, bridging, iron laying of track, purchase of cars, and erection of buildings will all be covered by the sum of six hundred thousand dollars. The ties will be supplied from the timber on the hills bordering the Walla Walla Valley, and it is proposed to contract for all the iron, cars, and necessary fixtures in Eastern markets. Walla Walla is an incorporated city containing two thousand people, and the county seat of one of the richest agricultural counties in Washington Territory, containing probably six thousand people. The trade and transportation on this entire line is now being carried on by wagons and hack-trains, where freight for the 30 miles is carried at $20 per ton. There are two daily stage lines over this section, where passengers are charged $5 per head.

It is estimated that not less than forty thousand passengers have passed to and fro over this line during the past year, and it may be safely estimated that not less than one hundred wagons are employed in transporting the freight to Walla Walla from the Columbia River, whence it is sent eastward to the Salmon River and Nez Perce's mines, south to the Powder River, Grande Ronde River and Boise River mines, and north to the mines on the Columbia and its tributaries.

There are six steamers engaged in delivering freight daily at Wallula, and this entire freight passes over this line. The construction of this road is a matter which has been contemplated for some time, and one which completed will, I guarantee, pay its stockholders the rate of two per cent per month on all capital so invested. The mines are largely supplied by the Walla Walla Valley from the products of its rich soil. Its climate is remarkably mild in winter, enabling the farmers to plough till Christmas and sow in February and March. Every crop is here grown and matured. Corn 80 bushels to the acre, wheat 30 to 40 bushels, oats and barley 30 to 40 bushels to the acre, and potatoes from 300 to 600 bushels to the acre.

Stock thrive here remarkably well. There are three grist mills and two saw mills in the valley. Much attention is also given to the rearing of sheep, and the mill privileges of the streams of the valley cannot be surpassed. All the grist mills are driven by water power. Timber is abundant on the hills that bound its valley; situated as it is, at the threshold of the rich mineral region, it will be seen at a glance what importance it must possess for all time, finding its market in the mines for all the produce which its soil and climate are so well calculated to produce. The corporators desire to inaugurate the construction of this road which is to redound to the full development of the country at an early date, and desire that all the facts and resources involved be made known.

They desire subscriptions to the capital stock of $600,000, in shares of $100 each to be made, when the stockholders either in person or by proxy will hold a meeting and appoint the necessary officers, and proceed to the construction of the work.

I have estimated that the necessary rails, iron, chairs, nails, turnouts, &c., can be delivered on the ground for $300,000, and that the cars, engines, ties, buildings, depots and work, will cost about the same amount.

The undersigned will receive subscriptions, and communicate any information on the subject to any parties whomsoever that may desire to subscribe to the capital stock of said company, and may be addressed in Washington, D. C.

JOHN MULLAN,
Capt. U. S. Army.

Walla Walla Railroad.

AN ACT *to incorporate the Walla Walla Railroad Company.*

SEC. 1. Be it enacted by the Legislative Assembly of the Territory of Washington. That A. J. Cain, B. F. Whitman, L. A. Mullan, W. J. Terry, C. H. Armstrong, J. T. Abbott, J. T. Reese, S. M. Baldwin, E. L. Bonner, Wm. A. Mix, Chas. Russell, J. A. Simms, Jesse Drumhaller, Jas. Reynolds, D. S. Baker, Geo. E. Cole, S. D. Smith, J. J. Goodwin, Neil McClinchy, J. S. Sparks, W. A. George, J. Nansyckle, W. W. DeLacy, A. Seitel, Wm. Ball, B. F. Stone, J. Schuabacker, B. P. Standerfer, J. Brown, Tatem, W. W. Johnson, and such other persons as may or shall be associated with them for that purpose are hereby constituted and created a body politic and corporate, by the name and style of the "Walla Walla Railroad Company," and said company is hereby empowered to build a continuous railroad, with one or more tracks, snd the necessary depots, turnouts, stations and appurtenances, for the proper, convenient and profitable use thereof, from Walla Walla landing on the Columbia river, to the city of Walla Walla in the county of Walla Walla, on such route as said company shall deem to be most advantageous to the public interests.

SEC. 2. The said company shall before the first day of November A. D. 1863, actually survey, or cause to be surveyed, the line to be adopted as their line of location and make, or cause to be made, an accurate plan or map thereof, which shall be duly filed in the office of the Secretary of this Territory and shall within said period, and after such survey and corporation, determine and decide upon the route which shall be adopted in making and constructing said road, and shall within said period, file such determination in the office of the Secretary of the Territory.

SEC. 3. The said company, shall within five years from the first day of November 1863, complete and furnish ready for transportation of passengers and freight, a single track of said railroad throughout the eutire length thereof.

SEC. 4. The capital stock of said company, shall be six hundred thousand Dollars, and divided into shares of one hundred dollars each, which shall be deemed personal property, and transferable in such manner as said corporation shall by its by-laws provide and direct.

SEC. 5. The above named corporators and such other persons as may be associated with them, shall have power to appoint commissioners, whose duty it shall be to open books at Walla Walla, and at such other places as they may direct, to receive subscriptions to the capital stock of said corporation, and as soon as the whole capttal stock shall be in good faith subscribed, the said commissioners shall appoint a convenient time and place for a meeting of the stockholders of said company, notice thereof shall be given to each stockholder, either personally, or by depositing a proper notice in the post office, directed to each stockholder at his residence or usual place of business, at least thirty days before the time of such meeting, and by giving one month's printed notice in some newspaper, printed at Walla Walla city, and such stockholders as shall attend the meeting so called, either, in person or proxy, shall elect by ballot eleven directors for said corporation, and in such election each share of said capital stock shall entitle the holder to one vote. Two of the commissioners as appointed by this section, shall act as inspectors of said election, and shall certify under their hands the names of the directors, elected at such meeting, and shall deliver over the subscription books to said directors.

SEC. 6. The directors chosen in pursuance of the last preceding section shall, as soon as may be after such election, elect from their own number a President and Vice President, and in case of the death, resignation or absence of the President, the Vice President shall act as President until the next annual election, and if the office of both President and Vice President shall be vacant, the board of directore shall fill such vacancies for the remainder of the year, but no person shall be a director unless he be a stockholder owning stock absolutely in his own right, and qualified to vote for directors at the election at which he shall be chosen.

SEC. 7. The President, Vice President and Directors shall hold their offices for one years respectively. The said President and Vice President shall be from time to time, appointed by the board of Directors, and the Directors shall be annually chosen at such time and place, and in such manner as may be provided by the by-laws of said company; the said board of Directors shall have power to appoint such clerks, engineers, agents and subordinates, as may from time to time be necessary to carry into effect the objects of this act.

SEC. 8. Each stockholder of this company, shall be individually liable to the creditors of such company, to an amount equal to the amount unpaid on the stock held by him, for all debts and liabilities of such company until the whole amount of the capital stock as held by him, shall have been paid to the company, and all the stockholders of said company shall be jointly and severally liable for all debts due, or owing to any of its laborers and servants for services performed for such corporation, but shall not be liable to an action therefor, before an execution shall be returned unsatisfied in whole or in part, against said corporation, and then the amount due on such execution shall be the amount recoverable with costs against such stockholders.

SEC. 9. The corporation hereby created is authorized to purchase, receive, enter upon and hold such lands, streams of water, real and personal estate as may be necessary and convenient in carrying into effect the objects for which this corporation is granted, but all lands, streams and real estate which are not donations to said company, shall be purchased by said company of the owner or owners thereof, at such price as may be agreed upon, and in case such price cannot be agreed upon, then the same shall be acquired by arbitration in accordance with the laws of this Territory.

SEC. 10. It shall be lawful for said company from time to time to fix and regulate the fare, tolls and charges to be received and paid for the transportation of persons and property on said road, or any part thereof, but said company shall in no case take or receive a sum greater than ten cents per mile for the transportation of passengers, nor a sum exceeding forty cents a mile for the transportation of one ton (two thousand pounds) of freight other than live stock or animals.

SEC. 11. It shall be lawful for the Directors of said company to require payment of the sum subscribed to the capital stock thereof at such times and in such proportions, and on such conditions as they shall deem to be necessary to complete the said railroad within the time in this act prescribed. Thirty days previous notice shall be given of the payments required, and of the time and place of payment, and in case any stockholder shall neglect or refuse to pay, in pursuance of such notice, the stock held by him or her and all previous payments made thereon shall be absolutely forfeited to said company, but the same may be redeemed, if in the opinion of the board of Directors such redemption shall be just, and on such terms as the said board may prescribe.

SEC. 12. The directors of said company shall make an annual report of their proceedings and expenditures verified by the affidavits of the President and at least three directors, and shall publish the same in one newspaper published in Walla Walla county.

SEC. 13. The board of directors shall have power from time to time, to make all necessary rules, regulations and by-laws for the government of said company which are not inconsistent with the laws of the United States, or of this Territory, and the same shall be binding and obligatory on such company and on each and every member thereof.

SEC. 14. If the said company hereby incorporated, shall at any time hereafter, obtain, accept, or receive the grant of any banking power or privilege, or shall become possessed of any such power, in whole or in part, either solely or jointly, with any other person or persons, or by the omission or addition of any name or names, or in like manner shall obtain, accept or receive the grant of any other privilege or franchise not granted or contemplated by this act, then all the rights, franchises and powers, hereby granted shall cease, and the said corporation shall thereby be dissolved. Provided that nothing herein contained shall be construed to prevent the said corporation, from acquiring rights of way to the extent limited by this act, on lands necessary for the road-bed and fixtures of the said road, with the grant of all necessary streams and water courses, and supplies of water necessary to the construction, maintenance and use of said road, nor to prevent the said corporation from receiving grants of land from the United States Government, or from individuals, for the benefit and use of said corporation, or to take and receive the same by due course of law, under the right of eminent domain or otherwise, when not otherwise inconsistent with the provisions of this act.

SEC. 15. The powers and privileges granted by this act shall not be exercised or enjoyed by the corporators therein named, or by their successors, unless such corporation shall, within the period of five years after the passage of this Act, in good faith commence and carry forward with all reasonable dispatch, active operations to accomplish and permanently secure the objects proposed by the terms specified herein.

SEC. 16. In case the corporation herein created, fulfill the terms and condition herein specified, this charter shall continue in effect and force until January 1st A. D. 1880, subject to such amendments as may be deemed necessary.

This Act to take effect and be in force from and after its passage.

Message of the Governor of Massachusetts in Relation to the Hoosac Tunnel.

The following is the message of the Governor of Massachusetts to the Senate, transmitting the Commissioners' Report on the Troy and Greenfield Railroad and Hoosac Tunnel:

EXECUTIVE DEPARTMENT, March 12, 1863.

To the Honorable the Senate:

I have the honor to communicate for the use of the Legislature, the report of Messrs. John W. Brooks, Samuel M. Felton, and Alexander Holmes, Commissioners appointed under chapter 156 of the acts of 1862, providing "for the more speedy completion of the Troy and Greenfield Railroad and Hoosac Tunnel."

By this report, made to the Governor and Council, it is apparent that the Commissioners have discharged the duties of investigation and inquiry into the whole subject of finishing the Troy and Greenfield Railroad, and of tunneling the Hoosac mountain, including the most economical, practical and advantageous methods for the completion of the work, the cost of fitting the railroad tunnel for use, the time within which the tunneling of the mountain can be completed effected, the probable cost of the enterprise, the probable pecuniary value of the road and tunnel, with their sources and probable amount of traffic and income, in a manner at once elaborate, comprehensive, instructive and convincing. Their report is attended by several plates, carefully illustrating those features of the proposed works more easily presented or explained by the aid of maps or plans, and is accompanied also by the report of Mr. Charles S. Storrow on European tunnels, who, at the requst of the Commissioners, and with the approval of the Governor and Council, visited Europe for the purpose of examining the most important tunnels already constructed, and especially that now in progress under the Alps at Mount Cenis, between France and Italy, which in many respects is supposed to be a work more nearly analagous to that projected under the Hoosac mountain than any other in the world.

It is accompanied also by the respective reports made to the commissioners by Messers Benjamin H. Latrobe and James Laurie on the Hoosac Tunnel and Troy and Greenfield Railroad. The first contains observation and opinions which were the result of Mr. Latrobe's personal examination of the Hoosac mountain and tunnel, seen in the light of a considerable professional experience in works of a similar character, though of proportions less gigantic; the second (the report of Mr. Laurie) exhibits a minute and scientific survey of the whole route of the railroad and tunnel, with elaborate calculations. This mass of documentary matter, with the profiles, maps and plans contained therein or prepared for ample illustration and referred to in these reports, presents, as I believe, an exhaustive treatise upon the subject intrusted to the investigation of the commissioners in all its parts and relations. It is itself a monument of industry and learning, and of practical as well as professional judgment.

The report of the commissioners establishes the *feasibility of the grand enterprise of tunneling the Hoosac mountain*, and the necessity of ultimate and essential changes in the details of the railroad line, of essential and important changes in the character and quality of the work upon the road and bridges, and of the enlargement of the tunnel itself; and also the necessity on the part of the State of taking into its own hands the enterprise of constructing the tunnel, undertaking the work on its own account, controlling its own agents, and holding them directly responsible for the integrity of their management. This course is, in the judgment of the commissioners in a work so exceptional and peculiar, an essential condition of energy, economy and success.

The Commissioners find that a period of eight years will be necessarily employed in the accomplishment of this work. The advances already made by the Commonwealth to the Troy and Greenfield Railroad Company, with interest to January 1, 1863, including the special appropriation of $175,000 made last year, amount to $968,862. The additional interest at five per cent. for eight years amounts to $462,585. The cost, therefore, in which the State is already involved toward this enterprise, assuming its completion in eight years, is $1,431,447. The cost of completing the tunnel is estimated by the Commissioners at an additional sum of $2,696,229, to which should be added interest during construction, $522,094, giving a result of $3,218,323. The estimated expenditure immediately required to complete the road east of the tunnel is $447,060, the interest on which item it is assumed will be paid out of earnings to be received during the construction of the tunnel.

The cost of permanent work, from time to time, to replace the present temporary structures, as they fail, is estimated at $50,000. The cost of straightening and improving the line east of the tunnel, to be done as the last thing before the tunnel is completed, is placed at $155,000. These three last enumerated items involve expenditure of $652,060, deemed necessary to establish the road from Greenfield to the mountain on such a footing as to enable it to meet reasonable expectations as a through route. The cost of constructing the two miles from the western terminus of the tunnel to North Adams is stated at $67,500. The expense of the additional depot buildings, shops, &c., for the completed line, will be $75,000, and the cost of the rolling stock $275,000.

The total estimated cost on road and tunnel, including advances hitherto made by the Commonwealth, with interest on past and future advances and expenditures at five per cent., compounded until the expected completion of the tunnel, including also the expenses of altering and enlarging the work already bored, straightening and improving the road and bridges, amounts, therefore, in the whole, to the sum of $5,719,330.

It will be remembered that the act under which the commissioners were appointed, and under which the prosecution of the work of constructing the road and tunnel was authorized, with the approval of the Governor and Council, to be continued, contemplated expenditures and advances which, together with all sums hitherto advanced thereon by the Commonwealth, should not exceed $2,000,000 in the aggregate. But the total amount of advances made by the Commonwealth prior to the date of suspension of work in the summer of 1861, was $778,695, which with an additional payment of $175,000 appropriated under the act of 1862, will give a total advancement, excluding interest of $953,695, already absorbed out of the appropriation of only $2,000,000, of which the statutes thus far contemplated the expenditure. The cost of completing the whole work is therefore so considerably beyond the unused portion of the $2,000,000 appropriated as imperatively to demand still further legislation to render the prosecution of the enterprise practicable by the commissioners.

It will be observed that the Commissioners' report, with the attendant documents, is communicated in print, the Commissioners having been directed, for the purpose of avoiding the delay consequent upon printing the documents after presentation, to make their report originally in print. It is understood that copies are ready for immediate distribution to the members of the General Court. Among the successful efforts of the commission, the Legislature will be gratified to notice that of securing an agreement in writing from the Fitchburg Railroad, the Vermont and Massachussets Railroad, and the Troy and Greenfield Railroad and Hoosac Tunnel, of twenty per cent., or one-fifth of their gross earnings respectively upon the passenger and freight business coming upon their roads from any part of the Troy and Greenfield Railroad. This agreement, however, provides for its own modification or annulment when the earnings of the Troy and Greenfield Railroad shall have reached a point indicative of established and permanent success, the particular tests of that success being predetermined in the agreement. And in this connection I have also to invite the attention of the General Court to a letter from Mr. Brooks, the chairman of the commission, addressed to myself, bearing date of this day, communicating the correspondence between himself and the President of the Fitchburg Railroad Company, concerning a proposed lease of that part of the Troy and Greenfield Railroad lying east of the tunnel, for a period of six years, and pending the construction of the tunnel. This negotiation was initiated to enable the State to determine whether it would be wise to complete at once the railroad between the eastern terminus of the tunnel and the town of Greenfield, of which the proposal of the Fitchburg and Vermont and Massachusetts Railroad Companies, dated yesterday, is a material encouragement.

I deem it my duty also to furnish for the information of the Legislature, a letter received this day from the chairman of the commissioners, accompanied by a careful statement prepared by himself, exhibiting the whole amount heretofore expended upon the construction of that part of the Troy and Greenfield Railroad, between Greenfield and the tunnel. This statement exhibits the quantity and kind of work done upon that piece of road before the suspension of its progress in the summer of 1861. The result shows that the Commonwealth had advanced at that time out of the $650,000, the sum of $481,428, of which amount the company were only entitled to have received $350,090, that being the proportion of $650,000 authorized by the Legislature, which the work done bears to the expense of the whole work. In other words, the Commonwealth had made over advances equal to $131,338, assuming $650,000 as the sum which the Commonwealth should furnish in the whole under the act of 1860. And it is further shown that this statement is based upon the supposition that the work performed had been paid for, and so far as it went, was a clear and unembarrassed security to the State for its advances, which in fact was not the case; for of the $175,000 appropriation of 1862, there is to be paid out toward these very expenditures, the sum of $153,006 51, according to the returns made by the commiseioners acting as auditors under that appropriation. Thus, the sum total of our excess of advances becomes $284,344 51, on that piece of railroad out of $650,000 granted by the act of 1860. The following figures, taken from the same statement, present a view of the amount advanced by the State on the same piece of road, in excess of the amount actually thus far expended by the contractors upon the work.

Amount actually expended		$463,047 90
Amount of the above yet to be paid by State out of the $175,000 appropriation		153,006 51
Amount expended by contractors, but not all paid for, as the $175,000 appropriated did not cover all the liabilities		$310,041 39
Amount paid by the State beyond first appropriation in sterling at $4 44 to the £	$50,172	
Difference between $4 44 and the real equivalent of the sterling in dollars	$5,311	
Amount paid under the $650,000 appropriation	$481,428	
		$536,911 00
Amount paid more than went into the work		$226,869 61

The amount for superintendence and other expenses probably does not equal the amount still unpaid of the contractor's debts alleged to have been created by the work.

I congratulate the General Court and the people upon the rescue of the Commonwealth, and especially of this great experimental enterprise, from a position inconsistent with economical, safe or even possible success in piercing its mountain barrier.

I earnestly and respectfully invite your most candid and thoughtful consideration not only of

the specific facts and figures which elucidate or express the details of information bearing most immediately upon the work contemplated; but I also venture to commend to your delibrate judgment the arguments and reasoning drawn from liberal and enlightened views of public policy and of public economy, which finally lift this subject above all merely local interests or antagonisms into the sphere of statesmanship. And having attentively watched the report of the commissioners, and the documents by which it is accompanied through the press, I am prepared to give my own assent to the opinions with the expression of which the commissioners conclude their discussion:

By the time the tunnel can be completed "the public interest requiring it will have grown large enough to pay for the outlay. The impulse given to business by the new facility would soon fill up the new line and make up the temporary loss felt by any other.

Considering the large sum which the Commonwealth has already invested in this work, which must be sunk if it is not completed, the reasonable protection from loss which is afforded by the other companies interested in the line, the more intimate relations which it may promote between Massachusetts and the West, and the benefits which such an additional facility promises to the great interests of the city and State, we are of opinion that the work should be undertaken by the Commonwealth and completed as early as it can be with due regard to economy."

(Signed) JOHN A. ANDREW.

The following is the proposition of the Fitchburg, and Vermont and Massachussetts Railroad Companies, alluded to in the foregoing Message of the Governor:

BOSTON, March 11, 1863.

Dear Sir,—In reply to your communication of the 6th inst., we are authorized, by votes of our respective boards of directors, to make the following proposition to operate that portion of the Troy and Greenfield Railroad east of the Hoosac Tunnel, say between that point and Greenfield, for a period of six years from the time said road is put in complete condition to operate by the Commonwealth, including the necessary buildings and side tracks along the line, and a turn-table at the tunnel end of the line, but no buildings at the Greenfield end; it being understood that any and all damage which may arise to any of the masonry culverts, or bridges, by freshets or otherwise, are to be made good by the Commonwealth, and that all slips of earth from either the cuts or the embankments, which amount to twenty cubic yards or more shall be made good at the expense of the Commonwealth:

That, for the first year, we will pay as rent the sum of fifteen thousand dollars.

For the second year the sum of eighteen thousand dollars.

For the third year, the sum of twenty-one thousand dollars.

And for the fourth, fifth and sixth years, the sum of twenty-five thousand dollars each year.

And also permit the Commonwealth to run construction trains, to complete any unfinished portions of the work, and furnish water, free; all other expenses of such trains to be borne by the Commonwealth.

We also propose to transport all materials and tools for the construction of the tunnel, at two and one-half cents per ton per mile for first class, and two cents per ton per mile for second class freights, over the said leased road.

This proposition is made with the understanding that the Commonwealth shall proceed, with reasonable despatch, to construct the tunnel.

Respectfully yours,

JOHN J. SWIFT, President,
In behalf of the Fitchburg R. R. Company.

ROBERT HALE, President,
In behalf of the Vermont and Mass. R. R. Co.,
J. W. BROOKS, Ch'man Com's T. and G. R. R.

Railroad Engineers.

This valuable class of citizens is continually finding promotion in the public service. We learn that stationed at Alexandria is R. B. Hugunin, formerly connected as Civil Engineer with the Cleveland and Toledo Railroad. Mr. H. was educated, in whole or in part, at the Naval Academy, and for a while after leaving the school was in the Navy, resigning for civil life occupation as engineer, in which department he is accomplished. On the breaking out of the war, Mr. Hugunin tendered his services to the country, and re-entered the Navy. At present, certain projectiles of his invention, have attracted attention, and Mr. H. has been assigned to duty at Alexandria to superintend their manufacture and a series of experiments to be made with them.

Also at Alexandria is Mr. J. H. Devereaux. Mr. D. holds the very important position of Superintendent of the Military Railroad, and deservedly enjoys the confidence of the Government in his great responsibility.

Galena and Chicago Union Railroad.

The earnings of this road for the years ending December 31, 1861 and 1862, have been as follows:

	1861.	1862.
From freight	$1,319,984 28	$1,308,847 98
" passengers	338,550 94	389,832 71
" mails, etc.	61,861 27	78,860 73
	$1,720,396 49	$1,777,541 42
Operating expenses, 1862:		
Repairs of track	$213,755 43	
" bridges	29,285 67	
" build'ngs etc.	25,718 32	
" locomotives	71,240 61	
" cars	76,781 68	
Locomotive service	81,651 93	
Train service	63,779 28	
Station service	114,404 16	
Use of cars of other Co's	7,017 39	
Fuel	108,213 32	
Oil and waste	11,516 11	
Salaries	29,396 25	
Damage	8,137 50	
Taxes	52,744 02	
U. S, Revenue tax	5,188 31	
All other expenses	44,106 06	
		942,936 03
Net earnings		$834,605 39
Add surplus January 1, 1862		425,058 11
Received of the C., B. & Q. R. R. Co. in partition of South Branch depot grounds		6,412 48
Received of the same Co., for lands west of the South Branch depot, not required for the use of this company		12,000 00
		$1,278,075 98
Divivend No. 21, Jan. 1862, 5 per ct.		$301,420 00
Dividend No. 22, July 1862, 3 per ct.		180,852 00
Interest on 1st mortgage bonds		139,090 00
Interest on 2d mortgage bonds		96,565 00
Improvement account		114,368 31
Cost of Sinking Fund instalments for 1st and 2d mortgage bonds		69,085 42
Premiums and commissions on $44,000 U. S. 7 3-10ths Treasury notes, purchased for 2d mortgage Sinking Fund		2,464 00
Commissions paid for extending 1st mortgage bonds		8,209 60
Bad and doubtful accounts		10,368 72
Surplus, January 1, 1863		355,652 98
		$1,278,075 98

A comparison of the earnings of the past with those of the preceding year shows an increase of $57,144 93; the increase in expenses was $33,724 15—making the increase in net earnings, $23,420 78. The entire receipts of the company in 1862, including the surplus earnings to January 1, 1862, were $2,221,012 01. The ratio of expenses to earnings were about 53 per cent., a small fraction over that of the previous year. The President, in this report says:

The dividend made in 1861 was five per cent., while that of the past year was six per cent., making a difference of $60,284 00. In addition to this amount, nearly $10,000 has been charged to Income Account, for Surveys, &c., made some years past, in reference to the erection of a bridge across the Mississippi River at Fulton, rendered now unnecessary by the recent arrangement with the Chicago, Iowa and Nebraska Company.

Of the first mort., bonds of the company there are outstanding	$1,989,000 00
All of which will be due on the 1st of August next.	
Amount of 2d mort., bonds due 1st May, 1875	1,346,000 00
Making the entire amount of bonded debt	$3,335,000 00

Proposals were made to the bondholders in September, 1861, to extend the first mortgage bonds for twenty years upon furnishing new sheets of seven per cent. semi-annual coupons. Up to this time, nearly one-half of the amount of these bonds have been extended, and no doubt the balance will be presented for extension before the time limited, the 1st of April next, to such an amount as to bring the outstanding bonds within the means of the company. In addition to the security of this class of bondholders, a Sinking Fund has been created, which, by the terms of the contract, took effect on the 1st of August last. It will extinguish the debt in 1882.

Sixty-five second mortgage bonds ($1000 each) have been purchased during the year, and applied to the second mortgage Sinking Fund. In consequence of the appreciation of this security, the remaining forty-four bonds, which should have been deposited with the Trustee in November last, could not be purchased, though special efforts were made by advertisements in the New York Ciiy papers, iu addition to those of the Agents of this Company in that city. The United States 7 3-10ths Treasury notes were deemed the safest for an investment; and with the concurrence of the Trustee, the balance $44,000, was invested in these securities.

A satisfactory partition has been effected of the land held by this company, in common with the Pittsburgh, Fort Wayne and Chicago, and the Chicago, Burlington and Quincy Companies, upon the South Branch of the Chicago River. The latter Company are constructing a new line of road into this city from Aurora, to be used by them in lieu of the thirty miles of your line from the junction to Chicago. Notice has been given by that Company of a discontinuance of the use of this line after the month of May, 1864.

During the year there has been added to the rolling stock, two locomotives, ninety-seven box cars and twenty-nine cattle cars, at a cost of $93,240 41. Fifty box cars and ten platform cars were taken from this Company by the United States Government for military purposes. To supply their numbers, will require a sum larger than awarded by the arbitrator, but new cars will be substituted for those partly worn, and measures have been taken to replace them in season for the business of the coming year.

In accordance with the circular of the Board, dated May 16, 1862, the matter of leasing, in perpetuity, the Chicago, Iowa and Nebraska Railroad, with its bridge and ferry at Clinton, Iowa, the road commencing at that place, and extending westward to Cedar Rapids, a distance of eighty-two miles, and the Cedar Rapids and Missouri River Railroad, an extension of the former road,

in progress of construction through the State of Iowa, upon, or near the 42d parallel of latitude, was submitted to the stockholders at their Annual Meeting in June last, and met with nearly an unanimous approval. Subsequently, negotiations were commenced, which resulted in perpetual leases from the Iowa Companies to this Company. Under these leases, your company took possession of these roads, and have operated them since the 1st of August last. The Cedar Rapids and Missouri River Railroad was then partially completed to Otter Creek, a distance of forty miles. Since then it has been extended to Marshalltown, the county seat of Marshall County, the centre of a rich and tolerably populous community, and commanding the trade of a large circle of country. This point is 151 miles west of the Mississippi River.

Since operating these roads, the business has fallen below anticipated results. This is accounted for by the general failure of the wheat crop upon the line of these roads, together with the withdrawal of an unusually large number of laboring men from agricultural and industrial pursuits, upon the call of the Government for troops, thus deranging the whole business of the country. These causes, it is hoped, are temporary; and when our present difficulties shall be overcome, it cannot be doubted but that the products of this fertile country will furnish a remunerating business for the local roads, and add largely to the receipts of your line.

Answers were received from stockholders holding nearly three millions of stock, to the circular of the Board, dated October 10th, 1862, asking the necessary power to lease the Beloit and Madison Railroad, a virtual extension of your Beloit Branch, from Beloit to Madison, a distance of forty-seven miles, (17 miles of which have been in operation for some years,) and a section of the Sugar River Valley Railroad, of 35½ miles from the City of Madison to Portage City. These answers exhibit an almost unanimous assent to making the proposed leases.

A perpetual lease has been made with the Beloit and Madison Company, recently re-organized, after a sale of its road and franchises under a decree of Court. This company hope to complete their road to Madison in the coming season. Arrangements have not yet been perfected with the Sugar River Valley Company.

The length of road operated by the company is as follows:

Main Line—Chicago to Freeport	121.00	Miles.
Second track	30.00	"
East Elgin Branch	1.50	"
Chicago, Fulton and Iowa Line	105.50	"
Clinton Bridge Branch	1.75	"
South Branch	10.50	"
Beloit Branch	21.00	"
Sidings and gravel pit tracks	50.44	"
Total	341.69	Miles.

The number of miles run by passenger and freight trains was 999,731; by wood and gravel trains and switching engines, 274,060; by C., B. & Q. trains on G. & C. U. track, 146,550—total ,420,341. The number of tons of freight transported was 497,638; number carried one mile, 47,521,169. The number of through passengers carried was 35,620, way passengers, 353,719—total 389,339; total mileage of passengers, 16,-607,182.

The earnings of the Chicago, Iowa and Nebraska Railroad were $73,537 05, and the expenditures, including $24,850 of materials on hand for future use, $71,862 82.

The earnings of the Cedar Rapids and Missouri River Railroad were $15,987 13, and the expenditures, including $6,200 for materials on hand, for future use and for work on the track, to be refunded by contractors, $18,582 87.

The capital and construction accounts remain the same as per last report. The following is a comparative statement of the funded debt at the close of 1861 and 1862:

First mortgage bonds—	1861.	1862.
Due February 1, 1862	$247,000	$2,000
" August 1, 1862	157,000	18,000
" February 1, 1863	60,000	43,000
" August 1, 1863	1,507,000	1,055,000
" February 1, 1882	22,000	871,000
	$1,993,000	$1,989,000
Second mort., bonds, due May 1, 1875	1,411,000	1,346,000
Litchfield bonds	10,702	.....
	$3,414,702	$3,335,000

The financial condition of the company, January 1, 1863, is shown by the annexed:

President.—WILLIAM H. BROWN.

Directors.—William H. Brown, Orrington Lunt, Geo. Watson, Edward K. Rogers, Mark Skinner, Benj. W. Raymond, Silas B. Cobb, John Wentworth, John H. Foster, Charles S. Hempstead, Thos. D. Robertson, William H. Ferry.

Vice President.—ORRINGTON LUNT.

General Sup't.—EDWARD B. TALCOTT.

Assistant Sup't.—EDWARD H. WILLIAMS.

Secretary.—WILLIAM M. LARRABEE.

Treasurer.—HENRY TUCKER.

Santa Clara Mines.

We have been favored from a reliable source with the annexed statement of the yield of quicksilver at the Santa Clara mines, California. These mines are owned and worked by a Baltimore company. They are located 69 miles from San Francisco, and adjoin the Fariquita mineral property, being also contiguous to the great New Almaden Mining property, the title to which has been so recently in dispute, and now confirmed by the Supreme Court. It has been suggested that a consolidation of all these mining interests into the hands of a single company would give them the virtual control of prices of quicksilver throughout the world.

The yield of quicksilver from Santa Clara Mines has been as follows:

For the years 1857 and 1858	250,521	lbs.
" " 1859	160,053	"
" " 1860	194,555	"
" " 1861	210,604	"
First 9 mos., 1862	100,747	"

The above is to October 1st, 1862, which is the latest return. This would make the yield to this date something over one million pounds.

Banking Associations.--Corporation's Lien upon Individual Shares.

A PROVISION IN THE ARTICLES OF ASSOCIATION, THAT SHARES ARE NOT TRANSFERABLE UNTIL DEBTS DUE FROM THE SHAREHOLDER ARE PAID, INCLUDES LIABILITIES WHICH MAY NOT HAVE MATURED AT THE TIME OF THE DEMANDED TRANSFER.

This was an action between one Leggett, the assignee of William E. Leggett, and the Bank of Sing Sing, for the refusal of the defendant to permit the transfer upon its books of twenty shares of the capital stock of the bank to the plaintiff. The case was tried before a referee; and, upon the trial, it appeared that Leggett was one of the general associates in the organization of the bank, and became the holder and owner of twenty shares, of one hundred dollars each, of its capital stock. The articles of association required suitable books to be kept by the directors for the registry and transfer of the shares, and declared that "every transfer, to be valid, should be made on such books, and signed by the shareholder or his attorney duly authorized in writing. Section 3 of article 5 was in these words: "No share or shares shall be transferable on which any call for an installment of capital, or any interest on such installment, shall remain unpaid, nor unless the shareholder making the transfer shall previously discharge *all debts due by him* or *her* to said association, or shall have remaining capital stock untransferred sufficient to cover and secure the amount that he or *she may owe* to the said association." Section 4 of the same article made provision for the sale of the stock "whenever any shareholder of the association should *owe a debt then due* to the association, and which should have been due and unpaid for the space of three months." These provisions were well-known to the plaintiff.

On the 3d of January, 1854, William E. Leggett sold and assigned his stock to the plaintiff, and delivered the certificate, assignment and power of attorney to transfer the same on the books of the bank to said plaintiff. On the 8th of May 1855 and again on the 10th and the 14th days of the same month, the plaintiff demanded of the defendant, upon a production of the assignment and power of attorney, and offer to surrender the original certificate of stock, that the stock be formally transferred on the books, and a new certificate thereof be delivered to the plaintiff; which was refused, the defendant claiming that the original shareholder was a debtor to the bank, and that the stock was a security for the payment of such debt, and was not transferable until the same should be paid. It was admitted that William E.

Leggett on or about the 1st of January, 1854, was endorser on notes of one Thompson, since deceased, to the amount of $4000, which notes were then held by the defendant; that Thompson died before said notes became due, and the notes were protested and the endorser charged; that William E. Leggett became the executor of Thompson, and from time to time paid portions of said notes, and gave his notes as executor, endorsed by him individually, for the balance due. It also appeared that on the 9th of April 1855, there remained due of the Thompson debt $1,900, for which W. E. Leggett on that day, made a note payable on the first day of August thereafter, payable to his own order, and endorsed by him and signed, "W. E. Leggett, Ex.," which note was outstanding *and* held by the defendant at the time of the demand of the transfer and new certificate in May 1855.

The referee decided that the note for $1,900 not having matured at the time of the demand for a transfer of the stock, the same was not a lien upon the capital stock of the maker, and that the plaintiff was entitled to a transfer of the stock, notwithstanding such indebtedness, and gave judgment for the plaintiff for the value of the stock. This judgment was affirmed by the Supreme Court, and from that judgment the defendant appealed to the Court of Appeals. The following is an opinion rendered at the final decision of the case, reversing the judgment of the Supreme Court and ordering a new trial:

WRIGHT, J.—The real inquiry is, was there a "debt due" from Leggett to the bank, within the meaning of the articles of association, at the time the transfer of the stock was demanded. It is not the question, whether, at the time the plaintiff became the equitable owner of the stock by a secret undisclosed sale, the shareholder was such debtor; nor whether the endorser of a promissory note, whose liability has not been fixed, falls within the class of debtors in respect to whom the lien was intended to attach. It may be conceded that it must be a fixed liability of the shareholder himself. The referee finds, and the case discloses the facts, that in January 1854, Leggett was endorser on certain notes made by one Thompson and discounted by the bank, which had not then matured. Thompson died before the notes matured, and after their maturity Leggett reduced the amount of such notes by payments. On the 9th of April 1855, there was the sum of one thousand nine hundred dollars remaining due, for which amount Leggett made a note, payable at the defendant's bank on the 1st of August 1855, to his own order, and endorsed by himself. The note was signed "W. E. Leggett, Ex." Leggett thus undoubtedly become a debtor to the bank. If his contingent liability as endorser had not been fixed previously, he undertook then to become personally responsible for one thousand nine hundred dollars of the indebtedness. Affixing the letters "Ex" to his signature could not alter his personal liability or bind the estate of Thompson. This was the view taken by the referee and the Supreme Court. If Leggett was not a debtor of the bank, within the meaning of the articles of association, prior to the 9th of April 1855, he unquestionably assumed the relation at that time.

But the referee placed his decision, not on the ground that Leggett was not indebted to the bank when the transfer of the stock was refused, but on what I deem to be an erroneous construction of the provision of the articles of association touching the question. The phrase, "all debts due by him or her to the association," was held to mean only debts presently payable, and that although a stockholder may have borrowed on his own note the money of the bank and put it in his pocket, unless such note had matured, no lien attached, and the association could not lawfully refuse a transfer of his stock. This cannot be a correct interpretation of the sense in which the associates used the words, "all debts due," or designed that they should be understood. The provision was intended to embrace all debts which the stockholders owed the association, whether payable presently or in the future. Its purposes was, not to facilitate stock jobbing, but to promote the legitimate business of banking, and to benefit the bank by strengthening its securities; and it is in this light that the provision is to be construed. There is a much stronger reason for inferring an intention to embrace debts payable in the future rather than presently, growing out of the fact that most of the debts created with a banking institution are through the medium of discounted paper, where the credit of the borrower is extended. As was said in Grant *vs.* the Mechanics Bank of Philadelphia, of what benefit would it be if the stockholder had the unrestrained right of transfer at any time before his note fell due? The time of making the loan is that at which the directors must look for security. To construe the provision to embrace only debts presently payable, would be to limit it for the benefit of the borrower, and not the association. The whole provision taken together, shows that the object of making the stock not transferable was to "cover and secure" the amount owing by the stockholder to the association, whether due and payable *in presenti* or *in futuro*. The restraint is upon transferring the stock, "unless the shareholder shall previously discharge all debts due by him to said association, or shall have remaining capital stock untransferred sufficient to cover and secure the amount that he may owe to said association." The expression, "the amount that he may owe," is evidently intended as the equivalent of the previous phrase "debts due," each being used to denote the indebtedness which the stock was to "cover and secure." The apt and explicit words used by the associates in the succeeding section of the fifth article, to limit the right of sale to cases of actual default, shows that they had no difficulty of discriminating when that was their purpose, and excludes the idea that the general words of the previous section were used in the same restricted sense. When, therefore, the bank was first notified that the stock had been assigned to the plaintiff, and the latter demanded that it should be transferred to him. Leggett, the shareholder, was a debtor to the bank, and on that ground I think such transfer was rightly refused. It can make no difference with the question if it should be conceded that, in January 1854, when the plaintiff became the equitable owner of the stock, Leggett was not a debtor to the bank, and that then, had a transfer been demanded, it could not have been legally refused. Nor is it important to determine what would have been the rights of the plaintiff and the bank, had the plaintiff upon becoming the equitable owner of the stock, notified the bank that he was such owner. Nothing of the kind was done. The case is presented of the plaintiff unknown to the bank in January 1854, purchasing a shareholder's stock, and taking an assignment of a certificate expressing on its face that the shareholder's title was subject to all conditions and stipulations in the defendant's articles of association, transferable only on the books of their banking house, by him or his attorney on delivery of such certificate; and that, although knowing that the articles of association gave the bank a lien on such stock for any debts due from the shareholder at the time the transfer was demanded, neither notifying the bank that he was such owner, or demanding a transfer until sixteen months after the alleged secret purchase, and after the shareholder, if not a debtor to the bank at the time of sale, had subsequently become such debtor.

The lien unquestionably attaches in respect to the shareholder's debts existing when the bank is asked to transfer the legal title; and one becoming the owner of stock subject to a provision in the articles of association giving the banks such lien, and of which he has knowledge, but who omits to give the bank notice of his ownership, and thereby enables his vender to have credit on the faith of his being a stockholder, has no superior equity to be enforced.

Judgment reversed.

Pittsburg and Connellsville Railroad.

The subjoined report of the Joint Committee on Internal Improvements, was submitted in the First Branch of the City Council, Baltimore, on the 4th inst., and under the rules, laid on the table, to be considered hereafter. The recommendations of the mayor of Baltimore, in this annual message, to which reference is made in the report, were, "that the interest of the city in the Pittsburg and Connellsville Railroad should be sold, or that an effort be made to obtain from the city of Pittsburg an appropriation of an amount equal to the interest held by the city of Baltimere, to be expended on this end of the road." The following is the report of the Committee on the subject:

The Joint Standing Committee on Internal Improvements, to whom was referred that part of the Mayor's annual message which relates to the Pittsburg and Connellsville Railroad, have duly considered the views and suggestion of the Mayor, and to assist them to a better understanding of the subject, have had before them the report dated January 26, of Messrs. Marston and Taylor, the two new directors in that company, recently appointed by his Honor to represent, in part, the interest of the city therein. The Committee have also had before them the report of Benjamin H. Latrobe, Esq., President of the company, (and a director also appointed by the Mayor on the part of the city,) in reply to the report of Messrs. Marston and Taylor. The statement made to the Committee by Mr. Latrobe, under date of February 9, 1863, and containing a full historical memoir of the Pittsburg and Connelsville Railroad Company since its incorporation in 1857, is also in their possession. With these documents before them, together with the information obtained from personal intercourse with those gentlemen, and reference to the annual reports of the company and to the other communications of the President on file in the register's office, the committee have been enabled to get a very clear and satisfactory view of the condition of the company's affairs, and they deem it due to those who have had the direction of them since 1856, when the million loan of the city was made to the road, to say that they have discovered no evidence of mismanagement or extravagance in their conduct of the

business of the company; on the contrary, the committee feel themselves called upon, in justice to the directory, and especially to the President of the Company, to say that the rights of the city of Baltimore appear to have been duly respected in the transactions of the Company, and that the failure to pay the interest on her loan since July 1857 has been the rsult of circumstances beyond their control; that it has been due to the unfinished condition of the road, the small revenue of a trade only now beginning to be developed, and the necessarily large expense of working the road *proportionate* to that limited revenue, although that expense appears to have been, in itself, very moderate compared with that of other roads. The Company also appears to have been under the necessity of meeting a class of claims against it which, although not secured by mortgage of the road, as is the loan of the city, had to be provided for in order to prevent the road from being taken out of the Company's hands by process under the local laws of Pennsylvania, which would have indefinitely postponed the period of its probable completion. These claims, however, seem to be in such course of liquidation as to relieve the road before long of their pressure, and to give promise that after another year there may be a net revenue applicable to the partial payment at least of the interest on the million loan. Even assuming that the road remained without making further progress to completion, the committee are of opinion that as much has been accomplished in advancing the work within the last six or seven years as circumstances would permit.

When Mr. Latrobe became President, in 1856, there were but twenty-five miles of road in operation, from Connellsville to West Newton, with two locomitives and a few cars, earning no revenue worth naming. The floating debt of the company was then $679,446, which was reduced in 1860 to $67,869, although it was since increased to $110,417, under the circumstances explained in the last annual report, but is now in rapid process of liquidation, the large share of it being secured by collaterals. In January, 1857, the road was opened twenty-three miles further from West Newton to a junction with the Pennsylvania Railroad at Turtle Creek, twelve miles from Pittsburg, and this extended line of forty-eight miles was worked in connection with that road until in October, 1861, it was completed into the city of Pittsburg, increasing the length of road to fifty-eight and a half miles from Connellsville to Pittsburg; adding to which the branch from Connellsville to Uniontown, opened in 1859, there are now seventy-one miles of road in operation, with ten locomotives and a revenue of $130,000 last year, now rapidly increasing and promising this year to reach near $200,000. This extension into Pittsburg being as much a part of the whole line as any other part of it, was, we find, fully approved and duly authorized by the ordinance of the City Council approved April 21, 1858, and has by its beneficial effect upon the prosperity of the road, and its prospects of completion, proved itself of a most judicious measure.

The present directory of the company, in addition to this enlargement of the capacity and value of the west end of the road, and consequently of the security of the city for the repayment of its loan, carried on the work at the long tunnel, near the Cumberland end, until their means were exhausted and the great money crisis of 1857 compelled a suspension of this work. The road has also been carefully located throughout its length, and is ready for a resumption of the construction at any time.

There are 90½ miles of road to be built between Connellsville and Cumberland, estimated to cost some $3,000,000 in cash, which may be raised by a first mortgage loan, under the permission of the ordinance of the City Council, approved June 10th, 1856. The forward state of the work at the great tunnel, and the comparatively easy character of the rest of the route, would allow it to be completed within two years from its resumption with an adequate force of labor. The company appears to have kept steadily in view the earliest possible completion of the road to Cumberland, but the state of the money market, in connection with the want of confidence in railroad securities up to near this time has prevented their accomplishing more than the extension and improvement of the road at its Pittsburg end. They have made persistent efforts in various quarters to obtain aid to complete the road to Cumberland, but only with partial success.

A more hopeful prospect opens now, however, in the warm interest which the Western roads centering at Pittsburg are manifesting in the extension of the Pittsburg and Connellsville Railroad to Cumberland. Through the efforts of the President and officers of the road this interest has at length been made to assume a definite shape, as will be seen from the proceedings of the stockholders' meeting of the Pittsburg Fort Wayne and Chicago Railroad, held in Pittsburg on the 25th of February. It may be reasonably expected that the direct aid of that company, and of the Cleveland and Pittsburg Railroad Company, with which it is about to unite, and which will form with it a combined line of nearly 700 miles in length, representing an invested capital of some $30,000,000, will, together with their influence in the money market accomplish within the present year the means required to complete the Connellsville road to Cumberland. This event would be forwarded by any aid which may be derived from the Baltimore and Ohio Railroad Company, which company has already given assurances that they will supply the rolling stock required to operate the road as a through line at its completion. If there were any resources at the disposal of the city which could be made available to assist in this important measure without increasing the funded debt of the corporation, it would, we think, be worth considering whether it would not be wise to thus employ them, as has been recommended by the City Directors in their report to the Mayor.

The committee is of opinion, in view of the preceding facts and considerations, that it would be highly inexpedient to take any step at this time towards asserting the legal rights of the city of Baltimore as mortgagee over the Pittsburg and Connellsville Railroad; and believe that the interest of the city will be best promoted by leaving the existing directory of the company to pursue undisturbed the measures they have in hand to insure its early completion, they ask to be discharged from the further consideration of the subject.

The Almaden Mine Case.

In the great case of the New Almaden Quicksilver Mine, the judgment of the Supreme Court reverses the decree in the Court below, which was in favor of the claimant, Castillers, under whom the Messrs. Barron claim. The Court adjudges that Castillers never had any valid title to the mine, by reason of the insufficiency in law of the papers issued by the Mexican authorities, upon which his claim of title rested. In reaching this conclusion, the Court held, in the first place, that the despatch of the Mexican Minister of Foreign relations to the Mexican authorities in California did not amount in law to a grant of the two leagues of land around the mine, which, under it, were claimed by Castillers.

The Court also held that the Board of Commissioners constituted by statute to determine land titles in California, after its conquest by the United States, had no jurisdiction over the mining right, which, by well-known principles of mining law, is wholly separate and distinct from the grant of the land in which the mine is found. Justices Grier, Catron and Wayne dissent from the opinion of the Court. This judgment of the Supreme Court leaves the title to the mine, which, as is well-known, is of enormous value, to be contested between the United States on the one part, and what is commonly called the Fassatt interest on the other part; this latter interest having, as is understood, united with itself most, if not all, of the other outstanding interests which claim the mine.

Among the interests affiliated with the Fassatt interest, which are still subject to litigation, is that of the Hon. Robert J. Walker, the value of which is of course greatly augmented by this decision. The net annual income from this mine is estimated to be not far from half a million. When in the hands of Messrs. Barron, at a time when quicksilver commanded a higher price than at present, the yield from the mine was probably nearly a million.

Railroad Earnings--Weekly.

The earnings of the Cleveland and Toledo Railroad for the 2d week of March, 1863, were $36,561 00
Same week, 1862 ..... 24,121 00

Increase $12,440 00

The earnings of the Toledo and Wabash Railroad Company for the 2d week of March, 1863, were $23,199 75
Same week, 1862 ..... 12,405 39

Increase $10,794 36

The earnings of the Chicago and Rock Island Railroad for the 2d week of March, 1863, were $29,252 00
Same week, 1862 ..... 18,106 00

Increase $11,146 00

The earnings of the Michigan Southern Railroad for the 2d week of March, 1863, were . $66,530 00
Same week, 1862 ..... 34,775 00

Increase $21,855 00

The earnings of the Galena and Chicago Union Railroad for the 2d week of March, 1863, were:

Freight	$22,010 28
Passengers	7,829 04
Mails	1,200 00
Total	$31,039 32
Same week, 1862	21,657 60
Increase	$9,381 72

The earnings of the Chicago and Northwestern Railway for the 2d week of March, 1863, were $23,287 93
Do., 1862 ..... 16,346 37

Increase (42½ per cent.) $6,941 56

The earnings of the St. Louis, Alton and Terre Haute Railroad for the first week in March were:

	1862.	1863.
Passengers	$4,496 41	$8,505 40
Freight	10,550 30	15,727 89
Mail and express	694 00	694 00
Total	$15,740 71	$24,927 29
Increase		$9,186 58

The earnings of the Michigan Central Railroad for the 2d week of March, 1863, were . $52,813 13
Same week, 1862 ..... 32,513 33

Increase $19,299 80

The earnings of the Chicago and Alton Railroad for the 2d week of March, 1863, were:

Passengers	$10,592 24
Freight	11,998 61
Sundries	974 33
Total	$23,565 18
Same week last year	19,975 39
Increase	$3,589 79

The earnings of the La Crosse and Milwaukee Railroad for the 2d week in March were:

	Freight.	Passengers.	Miscellaneous.
1863	$7,523 20	$5,806 74	$640 80
1862	5,565 49	4,915 38	629 00
Increase	$1,957 71	$791 36	$11 80

The traffic of the Great Western Railroad for the week ending March 13, 1863, was as follows:

Passengers	$20,217 50
Freight and live stock	49,479 26
Mails and sundries	1,240 36
Total	$70,937 13
Corresponding week of 1862	54,474 89
Increase	$16,462 24

The earnings of the Grand Trunk Railway for the week ending March 14, 1863, were:

Passengers	$22,067 51
Freight and live stock	54,524 72
Mails and sundries	3,800 00
Total	$80,392 23
Corresponding week, 1862	75,977 36
Increase	$4,414 87

The earnings of the Milwaukee and Prairie du Chien Railroad for the 2d week of March, 1863, were $9,889 37
Same week, 1862 10,461 16
Decrease $571 79

Railroad Earnings--Monthly.

The earnings of the Galena and Chicago Union Railroad for February, 1863, were $119,655 14
February, 1862 105,423 42
Increase $14,231 72
Corrected earnings for the previous month $132,517 52

The earnings of the Chicago and Alton Railroad for February, 1863, were $107,443 07
February, 1862 67,735 83
Increase $39,707 24

The earnings of the Cleveland and Toledo Railroad for February, 1863, were $147,437 00
February, 1862 90,657 00
Increase $56,780 00

The approximate earnings of the Pittsburg, Ft. Wayne and Chicago Railway Company during the month of February ult., compared with the same period of last year, were as follows, viz:

	1863.	1862.
From freights	$256,578 25	$199,806 13
" passengers	86,618 74	56,782 39
" express matter.	2,557 50	2,400 00
" mails	7,825 00	7,825 00
" rent of railway.	7,083 33	7,083 33
" miscellaneous..	689 75	360 91
Total	$361,352 57	$274,257 76
Increase	$87,094 81	
Earnings from Jan. 1 to Feb. 28	$700,104 50	$567,678 06

Increase for February, 31¾ per cent.; increase to Feb. 28, 23½ per cent.

The earnings of the Lacrosse and Milwaukee Railroad for February were:

	1863.	1862.
Freight	$45,995 53	$37,280 96
Passenger	18,043 64	14,724 49
Miscellaneous	2,647 41	2,780 27
Total	$66,686 58	$54,785 72
Increase	$11,900 86	

The earnings of the Hudson River Railroad for February, 1863, were $425,046 78
February, 1862 281,568 10
Increase $143,478 68

The earnings of the Toledo and Wabash Railroad for February were:

	1863.	1862.
Passengers	$22,198 50	$11,119 40
Freight	69,772 08	36,022 52
Total	$91,970 58	$47,141 92
Increase	$44,828 66	

The receipts of the Harlem Railroad for Feb'ry, 863, were $128,166 46
February, 1862 96,689 50
Increase $32,076 96

The Chicago and Rock Island Railroad earned in February, 1863 $126,521 00
February, 1862 86,699 00
Increase $39,824 00

The business of the Illinois Central Railroad in February was:

LAND DEPARTMENT.

Acres construction lands sold	11,720.66 for	$121,050 55
Acres interest fund lands sold	2,062.04 "	19,957 02
Acres free land sold	4,527.43 "	53,404 48
Total sales during the month of Feb'y, 1862.	18,310.43 "	$194,412 05
To which add town lot sales		1,607 00
Total of all		$196,019 05
Acres sold since Jan'y 1, 1863	32,897.11 for	$335,040 67
Acres sold previously, net sales	1,198,326.00 "	15,139,473 89
Total	1,231,223.98 "	$15,474,514 56
Construction bonds cancelled previous to Dec. 31, 1862		$2,300,500 00
Cash collected in February		100,256 35

TRAFFIC DEPARTMENT.

Receipts from passengers	$106,493 76
" freight	147,346 35
" mails	6,358 33
" rent of road	3,000 00
" other sources	6,000 00
Total receipts in February, 1863	$269,198 44
" " 1862	236,637 37

The earnings of the Chicago and Northwestern Railroad for February, 1863, were $81,750 52
February, 1862 49,103 35
Increase $32,647 17

The receipts of the European and North American Railway for February were:

	1863.	1862.
Passengers	$2,700 01	$1,781 53
Freight	5,484 01	2,816 94
Mails and sundries	440 66	421 75
Total	$8,624 68	$5,020 22

During the month of February, 1861, the receipts were:—Passengers, $2,505 71; Freight, $3,050 60; Mails, etc., $537 02—in all, $6,093 33. It will thus be seen that the receipts of February, 1863, exceed those of the corresponding months in 1862 and 1861 by $3,604 46, and $2,531 35 respectively.

The earnings of the Housatonic Railroad in February, 1863, were $16,839 85
February, 1862 15,398 02
Increase $1,441 83

The business of the Philadelphia and Reading Railroad Company for the month of February, 1862 and 1863, has been as follows:

	1863.	1862.
Received from coal.	$271,152 33	$147,025 43
Do. merchandise.	51,015 17	44,594 16
Do. travel, etc.	39,666 96	25,541 61
	$361,834 46	$217,161 20
Transport'tion, roadway, dumpage, renewal fund, and all charges	178,935 09	102,689 95
Net profit for the m'th	$182,899 37	$114,471 25
Do. previous 2 mos..	391,703 58	234,817 92
Total net profit for 3 months	$574,602 95	$349,289 17

The earnings of the Erie Railway for February, 1863, were $829,734 47
February, 1862 601,594 67
Increase $228,139 80

The earnings of the Chicago, Burlington and Quincy Railroad Line, for February were:

	1862.	1863.
Freight	$85,863 18	$161,610 11
Passengers	20,936 68	38,625 36
Mails and miscellaneous	3,254 21	4,301 68
Total	$110,054 02	$204,537 15
Increase	$94,483 13	

The Terre Haute and Alton Railroad earned in the month of February:

	1862.	1863.
Passengers	$19,493 32	$43,856 46
Freight	41,304 64	63,658 03
Mails, etc.	3,077 60	3,088 03
Total	$63,880 56	$110,602 82
Increase	$46,722 26	

The earnings of the Norwich and Worcester Railroad for February, 1862, were:

Passengers	$5,804 27
Freight	13,059 61
Total	$18,803 88
February, 1863	23,882 68
Increase	$5,018 80

The earnings of the Michigan Southern and Northern Indiana Railroad for February, 1863, were $230,508 00
1862 153,728 00
Increase $76,780 00

The Michigan Central Railroad earned for February—

	1862.	1863.
Passengers	$34,016 29	$65,075 91
Freight	115,103 98	174,571 46
Miscellaneous	10,538 32	6,210 52
Total	$159,658 59	$245,857 89
Increase	$86,199 30	

The gross earnings of the Milwaukee and Chicago Railroad were:

	1863.	1862.
For January	$15,254 61	$12,272 53
For February	15,302 93	8,577 21
Total	$30,557 54	$20,849 74
Increase in 1863	$9,707 80	

The business of the Cleveland and Mahoning Railroad for January and February was as follows:

	1862.	1863.
Gross earnings	$37,935 43	$55,833 51
Working expenses	17,856 85	22,972 12
Net earnings	$20,078 58	$32,861 39
Increase	$12,782 81	

RAILROAD EARNINGS—MONTHLY.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.

Stock Exchange and Money Market.

The Money Market during the past week, has undergone a wondrous change. Gold on Wednesday fell five per cent., and the holders of this commodity are anxious to save themselves from further loss. It is known that the Treasury has a full supply of coin, and will shortly disburse several millions in the shape of interest, which will have the effect of knocking down the prices still lower. Exchange has depreciated correspondingly, and prices of many articles of necessity obtained from abroad, have as a natural consequence, been reduced to the consumer. We notice that cotton, both in the staple and its manufactures, has fallen considerably, and that advertisements of sales at lower rates are beginning to crowd the columns of the newspapers. A more cheerful tone of feeling pervades the Northern mind, in strong contrast to the apprehensions which are expressed in the Southern papers, and the record of the disasters which are overwhelming the confederacy.

We have but a faint idea of the hopeless suffering which actually prevails there, of the enormous depreciation of its currency, the want of food, (for it is now proposed that the people shall henceforward eat but two of their scanty meals per day,) the want of clothing, and also of numerous other articles of necessity of which the poorest in the North have not been deprived. Our hopeful feeling is also strengthened by the conviction, tha

the movements of our armies and flotillas in the southwest are about to be decisive, while on the Atlantic coast, there are evident indications of a withdrawal of the enemy's military *materiel* into the interior, not for aggression, but safety.

Nor has the news from abroad been less inspiring. It is well understood, that both from Germany and France, proffers of large loans have been made to our Government, which if accepted, will not only be likely to lead to a resumption of specie payments, but to react upon the financial resources of the great English banking houses, and even on the reserves of the Bank of England itself. Just at this moment unfortunately for them, if not fortunately for us, the political condition of Europe is far from being satisfactory. The complications of the struggle in Poland, are extending themselves in all directions. Prussia may herself become the scene of revolution, if her monarch does not heed the bold language of the representatives of his people. France and Italy both sympathise with Poland, which has always sympathised with them in their struggles for republican institutions; and even in England, the Government in the midst of its rejoicings at the espousals of its young Prince with the fairest offshoot of "the majesty of Denmark," is disturbed and blinded by the dust of the continental melee. There are also symptoms of greater significance. While our Secretary of the Treasury is somewhat embarrassed by the resources which are pouring in upon him, we know that there is no such plethora in the treasuries of Europe.

By our last advices we learn, the agents of Prussia have been seeking in vain to procure Government loans, at the hands of the very bankers, who, afraid to trust their money with needy Monarchs, are not afraid of American securities.

It is also announced that the Italian Minister of Finance has brought in a bill, requesting the authorization of Parliament, to contract a loan of seven hundred millions of lire, (the lire being a fraction less than 20 cents,) which will add one hundred and forty millions of dollars to the present existing debt of five hundred and thirty-six millions.

In Paris the recent fall of the *rentes* and in the shares of the colossal Credit Mobilier, are accepted as a forerunner of a large loan to be effected for the immediate necessities of the Imperial Treasury, the anticipation of which has lowered the price of Consols in London, the barometer of English finance. Orders for gold are hourly expected from Paris, for these invariably precede any attempt in the Loan market by the French Government, a palliative, if not a deception.

Even Spain is not without its financial discomforts. It is doubtless known to our readers, that Spanish securities have long been excluded from the great Bourses of Europe, and that in consequence, her commercial and industrial interests are isolated from the sympathies and support of foreign capital. The condition of her "passive" debt, is a continual sore both to the London and Paris holders: they repulse all her attempts to put her hands any deeper in their pockets. A new and covert scheme for this last purpose, has been signally defeated. Repeated efforts have been made to place the shares of the "Madrid Mercantile Credit Company" on the lists of the Paris Exchange. This is another Credit Mobilier, and is intended to be a financial agent of the Spanish Government. It has been supported in its present efforts at recognition, by very powerful French interests but without the least success.

In strong contrast with all this, stand the financial power and resources of our own Government. The people have not only granted it all they want for the present, but for several years to come. The National currency is everywhere preferred to any other we have ever had. The Treasury has all the gold it requires, without paying for it the smallest premium, and pays it out again freely to its creditors, whenever it is due them. Within ten days five millions have been received in exchange for its 5 20's, and the offers are coming in with a rapidity as surprising as gratifying. We learn from official authority, that our revenue from Internal sources and Customs, is to be more than two hundred and twenty millions the present year, and likely to increase, thus affording demonstration that not only the interest on the present debt is sure to be paid, but would be, if it were two thousand millions, even then leaving a balance for a sinking fund. And to cap the climax of our good fortunes, we have two hundred millions of gold offered us by foreign capitalists.

Certainly we have great cause to rejoice at the present condition of things. What we want now, is unity of action in the great drama in which we are performers. Everything tending to distract or impair its progress to the close, should be frowned down. When the curtain falls, it will then we trust, fall on a great moral truth and great moral lesson, that Union is strength, and disunion perpetual misery.

The Philadelphia, Wilmington and Baltimore Railroad Company has declared a semi-annual dividend on the capital stock of five per cent., free of United States tax, payable on and after April 1.

The Hartford and New Haven Railroad Company has declared a dividend of $3 per share, free of Government tax, payable to stockholders registered here at the Union Bank on the 1st of April.

The interest coupons, due April 1, 1863, on bonds of Marion County, Ohio, will be paid at Irving Bank, New York City, from 1st to 10th of April, 1863.

The Cincinnati, Hamilton and Dayton Railroad Company have declared a dividend of five per cent., and the Government tax, payable at the Bank of America, New York City, on or after April 1st next.

The interest warrants on the second mortgage bonds of the Company, due May 1, will be paid at the same bank.

Holders of the unextended first mortgage bonds of the Galena and Chicago Railroad may have the same extended on application at the office of VERMILYE & Co., in this City, until the 1st of April, when the privilege will expire.

We learn that Messrs. LIVERMORE, CLEWES & Co., as regular correspondents of Mr. JAY COOKE, of Philadelphia, the United States Loan Agent, are receiving subscriptions to, and furnishing the bonds of 1882 on the same terms (and without risk or delay to applicants) as any other sub-agents.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Sixth Avenue R. R., 135; Second Av. R. R., 74; Rome and Watertown, 84@81; N. Y. Central Real Estate bonds, 106; Lackawanna and Western bonds, 116; Cleveland and Toledo Dividend bonds, 70; Miss. and Mo. L. G., 56; Cin., Ham. and Dayton, 135; Indianapolis and Cincinnati, 75; Illinois Central full stock, 90; Illinois coupon bonds, 105@108; Cumberland Coal pref., 18¾; Minnesota Mining Co., 104½; Quicksilver, 43@46; Central American Transit Co., 42@50; Canton Co., 25⅝; N. J. Zinc, 100; Brooklyn City Water Loan, 100.

Commissioner's Report on the Troy and Greenfield Railroad, and Hoosac Tunnel.

The commissioners appointed under the provisions of the act of 1862, providing for the speedy completion of the Troy and Greenfield Railroad and Hoosac Tunnel, have made their report to the Governor, who has transmitted it to the Legislature. It is a voluminous document of 329 pages—the Appendix, which is chiefly devoted to a history of tunneling operations in Europe, making 225 pages. The commissioners are J. W. Brooks, S. M. Felton, and Alexander Holmes, of whose report we append an abstract. The accompanying message of the Governor, which we also give in this number, states in brief the expenditure on the road and tunnel, the existing financial requirements for continuing their construction, and certain propositions for the future management of the scheme. The commissioners report that the Troy and Greenfield Railroad Company surrendered the road and property to the Commonwealth on the 18th of August last, and on September 4th the Commissioners took possession thereof. Deeming

it possible that some right might exist whereby the principal contractors might raise a question of possession, an instrument of release was presented to H. Haupt & Co., who agreed to it, reserving, however, all rights or claims which they might have against the Commonwealth for the injustice the act of 1862 had done to them, and claiming the right to petition any future Legislature for redress of grievance.

The commissioners, after reviewing the financial affairs of the road dircuss the character of the line, which, they say, as now located, "is essentially a contractor's line—such a one as might fairly be anticipated where the contractor and engineer were one and the same person, intensified, if possible, by his controlling a majority of the stock. Everything has apparently been sacrificed to save present outlay.

They do not advise the immediate abandonment of a considerable portion of the line, for the rea son that until the tunnel is completed the amount of business to be done on it will be small. The slopes in all the earth cuttings are too steep, and it is recommended that they should be as flat as one and a half feet horizontal to one foot perpendicular. Some of the temporary trestle works over the ravines will have to be strengthened. The construction of several of these, in places where stone for the permanent work could not be had, except after trains began to run on the road, was wise economy, but in others permanent structures should have begun at once. The culverts are faulty, from bad construction or insufficient size, and one-third of them have been damaged or destroyed by water. The walling on Green river is also defective in some places.

Exception is taken to the location, design, materials and workmanship of the Green river bridge, which might, however, be made available while another was constructing in a more eligible position.

The estimate of completing the road from Greenfield to Shelburne Falls—about thirteen and an eighth miles—with certain suggested improvements, would be $279,699; from Shelburne Falls to the east end of the Hoosac Tunnel—seventeen miles—$262,361 80. From the west end of the tunnel to North Adams—two miles—the expense of completing the road will be $67,500.

Every inquiry have been made by the commismissioners as to the process of constructing tunnel works which could possibly aid them in arriving at correct opinions, and in particular in respect to boring machinery. They conclude that the section of the Hoosac Tunnel is too small. The section, instead of being 14 feet wide and 18 high, ought not to be less than that calculated on originally, viz: 22 to 24 feet and 21 in height. The reasons for this opinion are various and given with great minuteness. With the best machinery in use; and taking all probable contingencies into consideration, including a ventilating shaft in the centre ten feet in diameter, and certain alterations in the present grade, the cost of the completion of the tunnel is estimated at $3,318,323; and the total estimated cost of the road and tunnel $5,719,-330. If hand labor is only used it will require eleven years and four months to complete the excavation of the tunnel; if partly by machine labor on the end faces from seven to eight years will be required. Regarding the mode of completing the work, the Commissioners recommend that it be done by the State, notwithstanding works constructed by States are said to be expensive, and in some respects made to serve political interests: for, the Commissioners say, "even with this excessively injudicious management, the losses have been small compared with those resulting from a loan of credit to companies of doubtful responsibility."

Excepting the construction of the tunnel the works would be advantageously completed by contract; and the State is admonished that it would not be wise to expect the tunnel work to be done except at a rate of prices which would cover all the contractors' risks, and that rate would certainly be so high as to make its completion by the State the cheapest plan.

It is recommended, if a suitable lease can be effected, that the line between Greenfield and the Tunnel should be at once completed, as it will accomodate the people in the valley, and be of material use in constructing the Tunnel.

A comparison of the tunnel line with several other lines is instituted, with the view to a demonstration of the amount of earnings that may be anticipated from the former, which favors the estimate that they will pay a fraction over four and a half per cent. on the expense of construction. The Commissioners say: "If, after this line is opened, the Boston merchants do their share of the work, which we think their interest will prompt them to do, the increase of business beyond this estimate should be large and satisfactory, not mainly by withdrawing traffic from the old line, but by that increase of business which always keeps pace with increased facilities. After showing the advantages realized by other cities from the opening up of communication between them and the Great West, while they have tended to lessen communication between Massachusetts and that region, the Commissioners say:

We cannot but suggest, that Massachusetts can hardly look with indifference upon the gradual waning of her relations with those who, in the early future must control the country.

The soil of our State requires a home market for its products, which our manufactories can only supply.

Both our agriculture and our commerce depend upon our manufactures, and it is of great importance to this interest that it be in a position to exchange its goods for the food it must buy with the least expenditure in transportation, for this both reduces the price of its goods and raises the cost of its food.

Every measure, therefore, which will shorten the distance between Boston and the West should receive our careful consideration, for it will aid our commerce, our manufactures, and, indirectly our agriculture.

The coastwise trade of Boston would feel the influence of having cheaper food to distribute.

A share in the export of Western produce, which now goes to the north and south of us, would be within our reach.

By the time the tunnel can be completed, the public interest requiring it will have grown large enough to pay for the outlay.

The impulse given to business by the new facility would soon fill up the new line, and make up the temporary loss felt by any other.

Considering the large sum which the Commonwealth has already invested in this work, which must be sunk, if it is not completed; the reasonable protection from loss which is offered by the other companies interested in the line; the more intimate relations it may promote between Massachusetts and the West; and the benefits which such an additional facility promises to the great interests of the city and State, we are of opinion that the work should be undertaken by the Commonwealth, and completed as early as it can be, with due regard to economy.

The Basis of Our Financial Power and Credit.

The recent offers from France and Germany, of loans of two hundred millions of dollars, made at this time, by capitalists known to have recently refused their aid to the Prussian Government, are gratifying evidences, that the power and position of the United States are beginning to be understood abroad, that the clouds of misrepresentation are breaking away, and it will shortly be discovered even by our worst enemies, that the cause we are maintaining interests the friends of truth and justice all over the world. It rests not merely on moral convictions, but on the determination of an outraged nation, with enormous wealth and exhaustless resources.

The Commissioner of Internal revenue has recently stated, that his official experience in the discharge of his duties "has enabled him to comprehend with more clearness than ever before, the magnitude of our national resources, and he has gained confidence daily in the ability of the country to carry the war to a successful termination."

Of the assessed value of the declared real and personal property of the country, we have frequently spoken in our former CIRCULARS; of its astonishing progress from thirteen States to thirty-four; of a population, increased from three millions to thirty-one, of the vast area of fertile lands still open to immigration and settlement, and of the enormous annual production, steadily increasing in amount and equal to any demand that can be made on it; but there are other views outside of those of the statistician to be taken, especially by foreign capitalists, affording positive demonstration of the greatness of our financial power and the perfect stability of the sources on which our national credit reposes.

National debt which is the foundation and almost entire support of most foreign Governments, has always been unpopular with ours. While they have made it their principal study how to get into debt and remain in debt, it has always been our effort how to get out of it. And thus two entire national debts have been paid off, and a large portion taken out of the market before maturity, at a high premium to the holders. We look in vain for any similar instance elsewhere in modern history. So much then for the character and policy of our Government with regard to its indebtedness. When we create a debt we contemplate and prepare for its payment. Next as to the producing power of our capital and industry, compared with those of other countries, it is very important that the principle on which these exert themselves should be understood abroad, for there is a wide and remarkable difference in our favor. Take England for example, the most prosperous of all the respectable old world monarchies. There, the struggle of industry is to acquire capital, in order to secure income. To do this satisfactorily in the limited home area of Great Britain would be impossible; it therefore becomes commercial and adventurous, it founds distant colonies, no matter whether penal or military, in order to obtain new marts and outlets for its surplus millions toiling in the workshops, the iron foundries, the mines, and the wool and cotton mills. This necessity for extension, colonization and foreign aggrandizement, has been illustrated at various periods by an accompanying and extravagant spirit of

speculation, such as the contracting of loans with irresponsible or delinquent Governments, where the losses are never to be balanced in the Great Ledger. Thus Spanish and South American loans particularly, as well as others in the East, remain as monuments of the risks British capital will run to obtain its coveted income.

In this country a different spirit actuates our business men. Their object is to increase their capital, knowing that income follows, and the money usually laid out by them in any transaction based upon the wants, or the progress and increase of the people, is not only expected to produce revenue, but to become within no distant period, capital itself, doubled, trebled, quadrupled, quintupled, according to the forecast with which the investment is made. Thus we see everywhere enormous fortunes realized in a few years, not by the accumulation of interest, but by the rise in the natural value of the investment. The greatest possessions in this country have originated in this manner.

Connected with this remarkable fact is another, that to no other country on the Globe has emigration been more constant. The tiller of the soil abroad, who to keep up its fertility has to return to it the greatest part of what it produces, might well choose another field of employment, where his crops are clear products and the soil is ever fresh and generous. Since 1820, more than five millions of foreigners, of whom the greatest part were of the industrial classes, have chosen this country as their permanent abode, and their prosperity is recorded everywhere in our towns, cities and states.

There is still another remarkable difference in our favor, and this is, the natural genius of the American people to open up and improve, their natural advantages, whether those of their rivers, lakes, coasts, wherever a commercial or manufacturing centre is foreseen, and in furnishing ample means of transportation to market, no matter what the distance. So also in the principle of association, by which small investments are aggregated to carry out great projects, and the universal facilities afforded by our legislation for the easy and legal combination of these interests. Here then is a Country with unparallelled and wide differences from all others, the result of our institutions, of our Union, our common interests, political, geographical and physical. No wonder that our Eighth Census gives such astonishing results, nor that the thoughtful and wise among us see, that the severance and destruction of these interests and this policy, will not only be a loss to this people but the whole world.

No wonder either, they have resolved that this time honored and successful unity shall be maintained at whatever cost, and to give money and men without stint to the suppression of a rebellion which would disintegrate and destroy the principles on which we have risen to greatness. If the people of Europe wish merely, to consult their own interests, they will ascertain from the history of our past what will be that of our future, and in what we have done, the guarantee of their own advantage in sustaining the Country, where their commerce, their arts, their kindred have been ever welcome and prosperous.

We stand then on the firmest foundations that ever up-held a nation. We find the verification, in the enormous actual taxable property of the Country, without considering the immense annual production, of which the Census took no account, for we are told nothing of the annual value of the agricultural articles consumed at the places of production, and nothing of the value of mechanical products where the amount of production is under five hundred dollars. There is also no account taken of the amount of the paid labor employed in clearing lands, building railways, canals, houses, manufactures, steamers and sailing vessels, nor in working our various mines, all of which are necessarily left out of the tables for the time being, and cannot be stated until the surplus enters into the value of fixed property and comes within the range of the next census.

In contradistinction to all this, we find the Confederacy in the most pitiable and hopeless condition. Its credit at home is depreciated to such an extent, that its Treasury notes bear the relation to gold of 650 to 100. It collects no taxes, it has no revenue, its fields are uncultivated even for the favorite crop, it has no commerce, except what it obtains surreptitiously by a run of the blockade, its armies have been recruited only by the violent impressment of old men long beyond the age of service, it offers nothing to the world to attract its sympathy but the dreamy right of revolt, a right they deny to the three and a-half millions of colored people, whom they enslave. Its productive power is confined to two or three staples, which would be of little value but for the ingenuity of busier, more practical and more industrious men. The contrast is too painful to be pursued. We are strong in right, strong in purpose, strong in means, and our credit which has sought no favor from abroad, now finds itself approved by the greatest Bankers of Europe, those whose opinions often, decide the policy of cabinets and the fortune of war. A few significant facts bear witness to the soundness of our theory.

It is ascertained that there are sixty millions of dollars of specie added to our stock of the precious metals since the breaking out of the rebellion.

The customs revenue for the third fiscal year of Mr. Lincoln's term, is estimated by the Secretary of the Treasury at $70,000,000, and the Internal revenues for the next fiscal year June 30, 1864, $150,000,000, ample to pay all interest and furnish a sinking fund adequate to the redemption of the whole debt within a generation.—*Samuel Hallett & Co's. American Circular.*

Troy and Greenfield Railroad.--The Hoosac Tunnel.

It is well known that a grand Tunnel, of about seven miles in length, has been in process of construction for several years through the Hoosac mountain, on the line of the Troy and Greenfield Railroad. A considerable portion has been excavated, but the greater part remains yet to be done. The subject has again come before the Legislature of Massachusetts; the Governor having sent in a special message a few days since, with the Report of Messrs. J. W. Brooks, S. M. Felton and Alexander Holmes, the Commissioners appointed to examine the Troy and Greenfield railroad. The report is accompanied by one upon European tunnels, by Chas. S. Storrow, who visited Europe at the instance of Gov. Andrew for that purpose, and reports of surveys and examinations made by B. H. Latrobe and and James Laurie, Civil Engineers. The Governor says the report of the Commissioners demonstrates the feasibility of the enterprise of tunneling the Hoosac mountain, and the necessity of ultimate and essential changes in the details of the road, the character of the work, and also the enlargement of the tunnel, and the necessity on the part of the State of taking the enterprise wholly into its own hands. The Commissioners are of opinion that eight years will be required to complete the work.

The State has already expended $968,682, which with the interest for eight coming years amounts to $1,431,447. To complete the tunnel it is estimated that $2,696,221 will be required, which with the interest to the amount of $522,094, will make an additional cost of $3,218,323. An expenditure of $652,060 was needed to put the road east of the mountain in proper working condition, including the replacing of temporary structures. For the two miles west of the mountain $67,500 is needed, and for additional buildings, &c:, $75,000, and rolling stock $275,000; making the total cost of the enterprise, including advances already made, with interest $5,719,330.

Of the original loan of $2,000,000, $953,695 has already been absorbed, and further legislation is recommended to provide for carrying on the work. Agreements have been made with the Fitchburg, Vermont and Massachusetts and Troy and Boston railroads, by which they are to contribute to the State if it should assume control of the work, 20 per cent. of their earnings received from connection with the Troy and Greenfield railroad. It is also proposed to lease the road to the Fitchburg railroad for a term of six years, while the work on the tunnel is being carried on, and the President of that road has replied in a distinct proposition accordingly.

The State has made advances more than required by contracts of $131,338, and there is yet to be paid $153,006 51, making a total excess of $284,-344 51.

We publish in another part of this number the Message, an abstract of the Reports, and the proposition of the Fitchburg, and Vermont and Massachusetts Railroad Companies. From the action of the Governor of Massachusetts, and the character of its Legislature, we have no doubt this great work will be pushed through with all possible dispatch.

Railway Fares.

A very interesting subject is being discussed in the English papers in relation to railway fares. The discussion was started in a publication well-known to American readers, by the title of *All the Year Round*, conducted by the celebrated Charles Dickens, who has gained no less reputation for his philanthropy and practical aid to suffering humanity, than his inimitable humor and pathos.

He asks why a passenger from 100 to 200 lbs:, who takes care of himself in a railway journey should have to pay more for his transportation than for five times the same weight in goods. We quote from him the following passages:

"Why do we pay for our place in proportion to the distance to be travelled? This mode of tariffing steam locomotion places the extremities of France (or of any other country where the railway system prevails) in a condition of inferiority. It recompenses Orleans for being situated on the Loire, while it punishes Bordeaux for having pitched her tent beside the Garonne. The same at York compared with Edinburgh. The invariable answer is, that the traveler who goes the furthest ought to pay the most money; for the reason that the railway from Paris to Bordeaux cost more than that from Paris to Orleans, and that the company burns more coal in making the total journey than in traversing only the fifth portion of it. The argument wears a logical semblance which serves only to mislead. It was in virtue of this argument that the postage of letters

used to be in proportion to the distance. It honestly took for granted that a sealed envelope caused a greater expense to the Post-office by pushing on to Marseilles than by stopping half way. . . . . Since the administration has established a mail service over the whole extent of its territory—since this service acts regularly, universally and punctually every day, whatever be the number of letters sent—what does it matter whether a letter go here or there? The service does its duty all the same from one end of France to the other, and the increase of distance for a letter no more increases the expense to the administration than the diminution of the distance causes any economy. The argument made its fortune. Could it not be applied to railway traveling? Granted that a traveller is a more cumbersome article than a sheet of paper folded and stuck into an envelope. Granted that the lowering of the prices would double the number of travellers, and consequently the expenses for accommodation and locomotion. On that point there would be a rule of proportion to settle. Therefore, without requiring an uniform rate, as for the post, we might certainly demand a reduction in the tariff in proportion to the distance. What is here suggested is not an imaginary scheme, but an experiment already tried, a reality in execution. There are several companies who at this moment apply the system of diminished charges in proportion to the length of the journey; but the favor is solely granted to packages in goods trains. But why should men be treated differently? Why should living parcels cost the company more than parcels done up in packing cloth? Is it because the one gets into the carriage of themselves, whilst the others have to be hauled into their places by the aid of trucks and pulleys?"

It is certain that the experiment of excursion trains has been tried very successfully both in this country and abroad. A reduction of fares for any particular occasion as a holiday, or to induce summer tourists to visit such resorts as Niagara Falls, has invariably been profitable to the companies adopting the plan. Now why might it not be adopted in the more regular and constant form of charging the traveler something less for making a journey of one or two hundred miles, than one of ten or twenty. The locomotives and train have to do their work and proceed to the terminus, whether there be any passengers to be transported or not. There is a daily expense incurred in running them, whether the cars are full or empty. Therefore it is better to have them always full, even if there be a slight reduction in the fares, than to have them nearly empty at high rates. Thus we imagine if the scale were adjusted, so that 5 per cent. were taken off for every hundred miles additional after the first, as between New York and Niagara, a very large number of passengers might be obtained, at least during the summer months. As between New York and Chicago, a similar adjustment might be made. A ticket to Albany would cost $3.00; for the next hundred miles, if being a part of the whole journey, the charge would be 15 cents less; for the next hundred sixteen cents less and so on up to 1,000. So that the through traveler would gain, say nearly two dollars on his ticket if he went through to Chicago. Very probably a much larger reduction could safely be made. The result would be, according to all experience, that of largely increasing the through travel, while the railway companies would not be put to any additional expense.

This is a far-seeing age in matters affecting the public tendencies, and we should like to see the reduction made "all the world round," and especially in the United States.

Horse Railroads of Massachusetts.

Twenty-two horse railroads have been chartered by the Legislature of this State, viz: the Boston and Chelsea, Broadway, Cambridge, Cliftondale, Dorchester, Dorchester Extension, Dorchester and Roxbury, Lynn and Boston, Malden and Melrose, Medford and Charlestown, Metropolitan, Middlesex, Newton, Quincy, Salem and South Danvers, Somerville, Stoneham, Suffolk, Union, West Cambridge, West Roxbury and Winnisimmet.

The West Roxbury road with its franchise was purchased by the Metropolitan Railroad Company, August 30, 1862.

The following statement of the condition and operations of the horse railroads in 1862 is made up from the last annual returns of the different companies:

Capital stock, fixed by charter	$5,100,000
" " as voted by the companies	3,037,800
" " paid in	2,382,150
Cost of roads	2,443,587
Cost of equipment	820,447
Total length in miles (single and double track	100
Number of passengers carried in 1862	14,854,885
Total income in 1862	$874,350
Expenses and interest in 1862	689,890
Net earnings in 1862	184,460
Number of horses owned	1,409
Cost of horses	177,032
Number of cars owned	227
Number of conductors employed in 1862	181
" drivers " "	185
" hostlers " "	124
Total number of persons regularly employed in 1862	727

Eleven of the horse railroad companies declared dividends in 1862, viz: Boston and Chelsea 8 per cent.; Broadway, 12½; Cambridge, 9; Dorchester, 7 61-100; Dorchester Extension, 8; Metropolitan, 8; Middlesex, 4; Newton, 6; Somerville, 5; Union, 10; West Roxbury, 8.

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & Co., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT REOILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS.

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.

Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

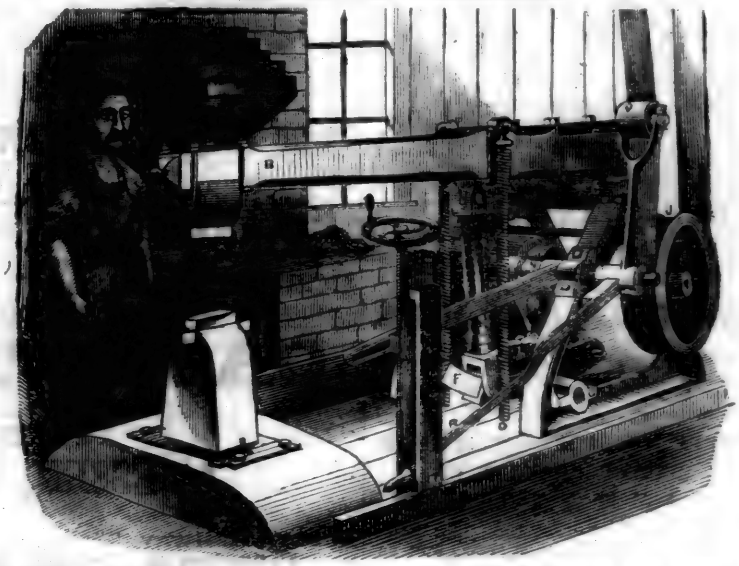
ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past ten years, with uniform success, they confidently offer their services to those requiring such aid.

VENTILATION.



THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS**, etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

Address **HENRY RUTTAN,**
Coburg, Canada.

AMES IRON WORKS,

SOLE AND EXCLUSIVE OWNERS AND MANUFACTURERS, UNDER PAYE'S PATENT.

An imperfect sketch of our smallest size Machine.

PAYE'S PATENT FORGE HAMMER, A HAMMER ADAPTED TO BOTH HEAVY AND LIGHT FORGINGS, with an adjustable stroke of from one inch to three feet. This hammer is adapted to both heavy and light forgings; the force of the blow being entirely at the will of the operator, and for all forgings under six inches, either round or square, is the best hammer now in use, and requires but one-half the power used by every other hammer to do the same work. For an engraving and description of this hammer, see page 1, Vol. V (new series) of the SCIENTIFIC AMERICAN; some valuable improvements have, however, been since made. All communications should be addressed to H. M. Ames, Box 422, New York, or Ames Iron Works, Oswego, N. Y.

These hammers may be seen in operation at the Allaire, Neptune, Secor, Delamater, Fletcher & Harrison, Duncan & Crampton, Anderson & McLaren, Duhurst & Emerson, Charles T. Porter, all in New York City; Joseph Colwell, Jersey City; Wm. White, Newark, N. J.; Providence (R. I.) Tool Co.; Whiting & Wilcox, Kaigh's Point, Phila.; Mallory & Cottrell, Mystic, Conn.; J. An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house, it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, 25 cents, Brass, 31 cents, Silver-Plated, 50 cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of $1.25.

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

Fink's Iron Bridge.

Perhaps no plan of iron bridge has been used so extensively and successfully in this country as the one designed and patented by Mr. ALBERT FINK. This plan was first adopted on the Baltimore and Ohio Railroad, in 1851, all the Bridges between Cumberland and Wheeling having been built on that plan, and have now stood the severe test of from 10 to 12 years' use.

When these bridges were first introduced in 1851, few iron Railroad bridges had been built in this country. The unfortunate failure of one or two badly constructed bridges on the Erie Railroad had caused a great prejudice against the use of iron in structures of that kind. It was argued that fibrous iron, having a tendency to become crystaline under certain conditions, could not be used with safety in Railroad bridges. Whether in that class of structures, the conditions under which iron is known to change its fibrous texture were existing or not, was a question not much inquired into. It was so much easier to get rid of the whole subject by uttering the word "crystalization" than to enter into a more careful and scientific investigation. There may be some excuse for not listening to theoretical arguments, in a case of this kind, but there is none for being blind to practical results. Since the first introduction of iron bridges on Railroads in this country, much valuable information has been obtained by experience. The unfavorable verdict against iron bridges has to a considerable degree been modified in their favor. Most of our leading Railroads are now rebuilding their temporary wooden structures by permanent iron ones. Our Railroad managers should make themselves fully acquainted with the various plans of iron bridges, the length of time they have been in use and the actual results obtained by experience. When the prejudice against iron bridges was at its height, Mr. Fink constructed the Bridge over the Monongahela River on the Baltimore and Ohio Railroad (1851). This bridge consists of 3 spans—each of 205 feet in length. The material of which it is built, wrought and cast iron; the wrought iron having to resist the tensile and the cast iron the compressive strains. Such combinations have been considered very objectionable, especially for bridges of long spans, such as those of the Monongahela Bridge. But Fink's plan was designed with the special view to overcome the difficulties of such combinations. Twelve years' successful use of this bridge on such a road as the B. & O. R. R., over which daily seldom less than 20 freight trains pass each way, and situated as this bridge is, on the mountainous part of the road, subject to great and sudden changes of temperature, should be considered a sufficient proof that in this plan of bridge wrought and cast iron may be safely combined; any defect of such combination would ere now have become apparent. We may also feel reassured, by twelve years' use of iron under such circumstances, as regards its durability in iron Railroad bridges. In order to test the question of a change of texture and the consequent loss of strength of iron when used in Railroad bridges, still farther, Mr. Fink instituted a few years ago a number of experiments with iron bars that had been in use in the Bridges of the B. & O. R. R. for 8 years. The nature of these experiments, and the results obtained were published at the time in most of the scientific papers of the country. They showed conclusively, that no change of texture had taken place in the iron during that time, and that its elasticity and strength was not impaired in the least.

Among the most notable iron bridges constructed on Fink's plan we will name the following:

Monongahela Bridge, near Fairmount, N. W. Va. on the Baltimore and Ohio Railroad. It consists of 3 spans of 205 feet in length each, crosses the River at an elevation of 43 feet, and at an angle of 45°. It was constructed in 1851–'52.

Tygarts Valley Bridge, on the N. W. Va. R. R. near Grafton. It consists of 2 spans of 205 feet length, and differs from the Monongahela Bridge in having a top chord of wood instead of cast iron. The wooden chords are separately covered in by a tin roof: the posts are, as in the Monongahela Bridge, of cast iron, and the suspension rods of wrought iron. This combination of wood, cast iron and wrought iron, for which Fink's plan of Bridge is peculiarly adapted, cheapens the cost of construction—and the wooden parts being protected, does not lessen the durability. Tygarts Valley Bridge was erected in 1854, and has since been in successful use, which shows that the combination of these different materials in the same truss is perfectly practicable.

Bridge over Elizabeth River at Norfolk, N. and Petersburg Railroad, consists of 3 spans of 205 feet each, all iron, similar to the Bridge over Monongahela River. It was erected in 1857.

The Bridge over Green River, near Mumfordsville, Louisville and Nashville Railroad, is 1000 feet long, has 3 spans of 205 feet, and 2 spans of 190 feet in length, crosses the river at an elevation of 115 feet; and is perhaps the longest and most imposing structure of the kind in the United States. It has now become historical from its associations with the events of the present war. General Buckner of the Rebel Army destroyed part of the bridge in the fall of '61, to prevent the advance of the Union army. He blew up a stone pier that was 90 feet high, and thus destroyed two spans of the bridge—leaving a gap of 390 feet. General Buell's army encamped in sight of the Bridge for several months, during which time a temporary trestlework was built to fill up the gap. In September '62, when Buell's army retreated to Louisville, the garrison left in the fortification erected for the protection of the Bridge had, after several days hard fighting, to surrender to Bragg's army. The temporary part of the bridge was burned, also

the floor which in the spring of the year had been put on the bridge, to march over it the army of the Cumberland. On this floor was a great deal of timber; notwithstanding this, the iron bridge was not injured in the least by its being burned. This may be mentioned as an accidental advantage of iron bridges in time of war. Had this Green River bridge been built of wood, it would have twice been completely destroyed. While it only took 10 days to repair the damage done to the bridge, it would have taken months to rebuild the whole structure, to say nothing of the difficulty of maintaining temporary works over a rapid stream.

The Bridge over Barren River, near Bowling Green, on the Louisville and Nashville Railroad, was built in 1859. It consists of 2 spans of 205 feet. It was completely destroyed in February, 1862, when the confederates evacuated Bowling Green. They blew up the stone pillars on which the Bridge rested. It was rebuilt in July of the same year. All the wrought iron parts of the old bridge, could be used again in the new, and the cast iron parts which were all broken, were used as scrap in the new castings. Thus the actual loss to the Railroad Company was much less, than if this bridge had been of wood.

It would lead us here too far to enumerate other important Bridges built on Fink's plan. From the following statement it will be seen to what extent and for what length of time these bridges have been in use.

The length of the bridges vary from 25 to 205 ft. span. Some are built entirely of wrought and cast iron, others of wood and wrought iron, and others of wood and wrought and cast iron.

Names of Roads.	Number of feet of Bridging.	Time when built.
Baltimore and Ohio R. R...	5,696 feet	1851–'53
North Western Va. R. R...	3,175 "	1854–'57

Total.....	15,998 feet.	

St. Paul and Pacific Railroad.

Hon. Edmund Rice, President of the St. Paul and Pacific Railroad Company, states in a card published in the St. Paul papers, March 6, 1863, that the company have all the arrangements made that are are necessary to complete the road as far as St. Cloud during the Summer, and that it is the purpose of the company to continue the construction of their branch road to Crow Wing, and thence to the Red River of the North, as rapidly as possible.

Ohio Canals.

The Board of Public Works, in their twenty-fourth annual report, just printed, gives the following statements of the receipts from all sources on the several lines of the public works, for the fiscal year of 1862, with the exception of the rent paid by the lessees:—Ohio Canal, $1,144; Hocking Canal, $285; Muskingdom Improvement, $1,042; Miami and Erie Canal, $4,664. Total—$7,136. The expenditures on the several works have been—$40,099.

Chicago and Alton, late St. Louis, Alton and Chicago Railroad.

We have received a copy of the General Report of the Receiver of the St. Louis, Alton and Chicago Railroad to Trustees of Bondholders, covering the entire period of the Receivership, from December 3, 1859, to October 14, 1862, the date preceding the day of its transfer by order of the U. S. Circuit Court of the Northern District of Illinois, to the Chicago and Alton Railroad Company; together with the Report of the Chicago and Alton Railroad Company from October 15, to December 31, 1862. The following is a statement of the operations of the road for the year 1862. The first column will show the earnings and expenditures from January 1, to October 14; the second column from the latter date to December 31:

	St. L., A. & C. Railroad. Jan. 1, to Oct. 14.	Chicago & Alton R. R. Oct. 15, to Dec. 31.	Total Jan. 1, to Dec. 31.
Earnings—			
Passengers..	$285,619 22	$87,571 32	$373,190 54
Freight.....	477,067 63	176,732 57	653,800 20

Road	58,730 70	21,439 51	80,170 21
Bridges.....	49,689 41	13,014 87	62,704 28
Stations, etc.	20,932 44	4,162 44	25,094 88
Fences	9,068 91	816 10	9,885 01
Total...	$233,929 46	$73,317 55	$307,247 01
Total exp. ..	838,750 16	235,703 86	1,074,454 02
Balance	82,743 95	67,802 86	150,546 81

The expenditures for permanent renewals for the current year 1863, are estimated at $348,869 90.

As the proposed work of renewal will require the employment of a large number of laborers, the president has, in view of this want, dispatched an agent to England to enlist, for the term of one year, 200 men to be employed on the track of the road.

The total receipts of traffic from the commencement of the receivership, December 3, 1859, to the close of the same, October 15, 1862, were $3,032,677 62. The total expenses of operation and repairs of roadway and rolling stock for the same time, $2,032,956 85—leaving a net profit of $999,720 74, expended as follows:

Permanent renewals.....	$731,504 02
Interest on loan from bondholders...	57,590 18
Advances on decree claims	96,372 14
Balance of assets.....	114,254 40
	$999,720 74

The per centage for cost of operation and repairs of roadway and equipments, will amount to 67 per cent. on the gross receipts; and this average, seemingly a high one, must be assigned to the inferior condition in which the property was received from its previous incumbents, and the impossibility of contracting such expenditures within the limits of railroads in a more perfect condition.

The receivership, on the surrender of the railroad by its previous incumbents in December, 1859, was incumbered by conditions of immediate payment of $64,000, and $217,854 91 within the ensuing four months, for arrears of back wages against which it was reimbursed by a loan of $232,772 50 from bondholders, leaving $59,082 91, to be realized from earnings; which, for the first half of 1860, including receipts of December, 1859, amounted to $468,107 24; out of which had to be met large expenditures on renewals and repairs, inclusive of the cost of operating the road. The receiver says:

The railroad and its equipments, when surrendered to me was in a condition of exhaustion; and so complete was the disorganization among its unpaid operatives, that they broke out in open mutiny and violence about a month after my possession of the road, instigated partly by the arrears of wages, left unpaid by previous incumbents, which was quelled by a prompt payment of these arrears and the discharge of the rioters; and so entire was the neglect which had prevailed in the care and management of the property for a series of years, it is quite certain the longer control of the same by them would have produced a cessation of its operations, and a possible sacrifice of the railway. The administration of its affairs commenced in 1860, with the prompt payment of every engagement, enabling me to appropriate out of the profits of that year $193,116 10 to the renewals of the roadway and rolling stock, a sum, however considerable, totally inadequate to their requirements, and as no provision was made for additional means from other sources, every care was taken to expend, in the most judicious manner, such as were available from the receipts of traffic.

The following is the General Balance Sheet of the receiver, Dec. 31, 1862:

Expenses—Ordinary..	$2,032,956 88	
Expenses—Ext'dinary	731,504 02	
		$2,764,460 90
Decree claims paid.....		696,372 14
Interest paid on receiver's loan		57,590 18
Due by sundry persons, as per abstract A ..	61,337 01	
Cash in hand.....	3,087 74	
	$64,474 75	
Less due to sundry persons, as per abstract B	26,040 94	
		38,433 81
Stores on hand, unused.....		75,820 59
Bills payable, note redeemable by canceled 1st mortgage bonds....		1,600,000 00
Total.....		$5,232,677 62
Earnings.....		$3,032,677 62
Sinking fund bonds		600,000 00
James Robb, Receiver.....		1,600,000 00
Total.....		$5,232,677 62

The length of the Chicago and Alton Railroad is 220 miles. The length of railroad used by the company's trains, Chicago to St. Louis, is 281 miles. The gross earnings in 1862, of the entire line were $1,459,971 88. The amount paid Joliet and Chicago Railroad, St. Louis, Alton and Terre Haute Railroad, and Alton Packet Companies, was

$234,971 05; leaving the earnings of the Chicago and Alton Railroad, 220 miles, as above, $1,225,000 83. The operation expenditures were $767,207 01; and the net earnings $457,793 82. The amount expended in renewals of line and stock in 1862, was $307,247 01. The unexpended balance of the renewal fund of $300,000 voted in 1862, is $226,682 45.

The cash assets of the Chicago and Alton Railroad Company on the 31st of December, 1862, available from all sources, were as follows:

1st mort., bonds in hands of trustees	$300,000 00
Premium on same—estimated	30,000 00
Balance of Receiver's assets	38,433 81
Balance of Company's assets	15,245 77
	$384,979 58

The issues of bonds and stocks as shown by the following Balance Sheet, have been made to the board of trustees charged with the redemption of the bonds of the Chicago and Alton Railroad Company, in accordance with the bondholders' agreement of January 10, 1860, and subsequently amended; and until they have finally closed the redemption of all bonds entitled to the benefits of this agreement, the actual capital of the company in shares cannot be known. It is safe, however, to presume it will not exceed the present amount issued to trustees.

The company now have 35 locomotives in running order, 6 rebuilding, and 17 unfit for service, a portion of which may be rebuilt; 35 first class and 3 second class passenger cars, 502 freight, 56 stock, 153 platform and coal cars, and 1 wrecking car. The number of miles run by engines during the year was 976,381.

The number of passengers carried north was 112,096; do., south, 108,165—total 220,261; of these, 15,965 were through and 204,296 way passengers.

The following is the General Balance Sheet of the Chicago and Alton Railroad Company, December 31, 1862:

Cost of road, equipment, etc.		$8,117,539 55
7 per cent. bonds in trustees' hands.		300,000 00
Due by sundry persons		74,539 14
Stores on hand, unused		129,395 04
Cash on hand		99,583 79
		$8,721,057 52
7 per cent. sinking fund bonds	$600,000 00	
" 1st mortgage "	2,400,000 00	
" Income "	1,100,000 00	
" Preferred stock	2,464,336 00	
Common stock	1,779,886 00	
Balance at credit of income account	143,137 77	
Due to sundry persons	167,877 16	
Material reserve account—being stores transferred from the receiver	75,820 59	
	$8,721,057 52	

President—(Late Receiver,) JAMES ROBB.
Superintendent—C. H. ALLEN.
Treasurer—JOSEPH PRICE.

Milwaukee and Chicago Railroad.

The Milwaukee and Chicago Railway Company (re-organized,) have elected the following management:

President—B. M. PRICE, Rahway, N. J.

Directors—Charles L. Frost, Edward Weston, A. Rusch, New York; F. Schuchardt, New York; B. M. Price, Rahway, N. J.; J. V. Ayer, Chicago; C. A. Hall, S. B. Scott, Milwaukee; S. A. Sage, Racine.

Treasurer—F. SCHUCHARDT, New York.

Obstructions in the Hudson River.

The N. Y. State Engineer has made a report to the Senate, giving a condensed history of the work done by the State and National Governments, from the earliest period, embracing the reports of committees, the action of Congress, the action of the State Legislature, communications and correspondence from and with Profs. Bache and Totten, Major Delafield, Hon. W. J. McAlpine and Samuel N. Payne, Esq.

From 1797 to and including 1833, the time the General Government assumed jurisdiction, there was expended:

Between Troy and Albany	$44,500 00
" Troy and Waterford	105,641 74
Total above Albany	$150,141 74
During the same period there was expended below Albany—	
Randall survey	$6,000 00
By Commissioners	7,998 81
Laws of 1827, dredging	14,000 00
In 1829, repairs, dredging	2,000 00
Laws of 1797 to 1818	35,566 60
Total below Albany	65,565 41
Whole amount to 1833	$215,707 15

The amount appropriated by Congress from 1833 to 1835 is as follows:—

In 1834	$70,000
In 1836	100,000
In 1837	100,000
In 1838	100,000
Total	$370,000

This amount was expended as follows:

On 1st Sec., between Sloop Lock and Troy	$6,743 64
On 2d Sec., between Troy and Albany	130,234 60
On 3d " " Albany and Van Wies Point	230,313 54
Total to 1835	$367,291 78

Leaving a balance of appropriation of $2,708 22, since expended in the preservation and repair of public property connected with the improvement.

The estimate made by the special Board of Engineers, who had the subject under consideration and examination, for thorough and permanent improvement of the navigation of the Hudson, was far greater than the amount appropriated by Congress. Their report recommended the expenditure between Waterford and New Baltimore of $819,634 10
Amount expended 370,000 00
Less amount estimated $448,634 10

Hon. Wm. J. McAlpine's report of 1853, relative to a ship canal from Albany to New Baltimore, at an expense of $2,450,000, is introduced. The width of his proposed canal at bottom was to be 50 feet; at surface 120 feet, with 20 feet depth of water; the locks at New Baltimore to pass vessels 300 feet in length and 50 feet in width. This canal was proposed to be twelve miles in length; $75,000 a year for superintendence, lock-tending, repairs, &c.

Extracts from the report of the Committee on Commerce and Navigation of the House of Representatives, made in 1855, are also embraced in the reply of the State Engineer and Surveyor.

From 1845 to 1852 the cities of Albany and Troy appropriated several thousand dollars, and the State gave $10,000 to the same purpose.

In 1852 Congress appropriated $50,000; $31,000 for dredging and deepening the bars, and it was then supposed that it would require from $400,000 to $500,000 to institute a system of dredging and dyking, and repairing existing structures, to procure a substantial channel of not less than nine feet in depth.

A communication from the late Isaac Newton, is also produced. The plan which he suggests has the merit of cheapness as compared with all others, and it has the semblance of being practicable and producing beneficial results. These shoals he claims, may be "*permanently and radically remedied, by damming the north end of the creeks or side arms of the river.*" The expense he estimates at $75,000, and $10,000 a year to keep the work in repair.

The total amount expended by the State and the General Government from 1797 to 1858, is as follows:—

State Government, above Albany	$150,141 74
" " below "	75,565 47
Total State Appropriation	$225,565 21
General Government, below Albany	280,313 54
" " above "	136,978 24
Total Gen'l Gov'ment Appropriation	$416,291 78
" State " "	225,565 21
Whole Appropriation	$641,856 99

According to Mr. S. N. Payne, an experienced operator in removing obstructions in rivers, the tidal head at Albany is 2½ feet, mean, and at Castleton 3½. He states that if the obstructions were removed and parallel concave jetties constructed, the tidal head of three and probably four feet would be obtained, which, when properly directed, would clear the channel without the assistance of dredging. Mr. Payne estimates the cost of this work at $100,000.

There has always been what is called the *overslaugh*, just below Albany. The 80 ton sloops of 100 years ago were often detained in the same places, where our thousand ton steamers now get aground. The river has not grown any smaller, but our vessels have grown larger. The plans which have been used successfully in the Clyde, will do for the Hudson.

Massachusetts Railways, 1862.

From the returns of the several Railway Corporations in this State to the Legislature, for the year 1862, the *Railway Times* has prepared the following figures, showing the operation for the year, both generally and in detail. The condition of the system as compared with that for the preceding, year is exhibited below:

	1861.	1862.
Number of companies	54	52
Length of roads, miles	1,530	1,608
Aggregate capital	$61,635,300	$59,487,752
Amount paid in	49,367,606	49,287,517
Aggregate cost of roads	63,272,801	66,793,474
Total revenue	9,016,149	9,933,581
Funded and floating debt	18,798,035	18,411,221
Surplus earnings on hand	3,562,290	4,160,360

Purchases, leases, and various business arrangements among the companies, cause the number and the total length of railways to vary slightly from year to year. The cost is in some years augmented by new construction, and in other years reduced by vote of the stockholders. It will be observed that the gross revenue for 1862 is more than for 1861. The detail of operation, as shown by the footings of the large table, compared with the same for the preceding year, is shown in the following table:

	1861.	1862.
Number of railways	38	38
Length of main lines	1,215.3	1,223.4
Length of branches	150.7	162.5
Double track and sidings	528.7	541.1
Cost of railway	$60,045,996	$60,010,348
Capital paid in	45,395,784	45,403,456
Funded debt	14,305,333	14,659,640
Floating debt	1,250,222	877,197
Total debt	15,555,534	15,536,837
Interest paid on debt	338,712	852,554
Dividends paid	2,449,188	2,296,701
Surplus	2,749,774	3,999,040
Receipts from passengers	4,079,461	3,949,033
Receipts from freight	4,091,554	4,131,597
Receipts from mails, &c	491,517	517,099
Total receipts	8,668,714	9,654,751
Expense of roadbed	1,061,531	1,052,325
Expense of machinery	563,994	948,317
Other expenses	3,244,797	3,358,273
Total expenses	5,170,332	5,291,286
Net income	3,331,560	3,542,093
Per ct. of expense to income	59.7	54.8
Net income per cent. on cost	5.5	5.9
Miles run by passenger trains	3,446,776	3,460,427
Miles run by freight trains	2,462,925	2,651,348
Miles run by other trains	200,601	153,069
Total miles run	6,110,243	6,294,564
Receipts per mile run, cts	141.6	153.4
Expenses per mile run, cts	84.1	84.1
Net income per mile run, cts	54.5	69.3
Cost of fuel per mile run, cts	11.2	10.9
Road repairs per mile run, cts	13.1	13.0
Engine rep'rs per mile run, cts	7.8	5.3
Car repairs per mile run, cts	6.7	6.6
Passengers carried	10,696,912	11,432,625
Passenger mileage	110,691,295	175,403,775
Tons of freight carried	3,262,268	3,671,885
Tonnage mileage	123,825,325	137,879,429

Regarding the ratio of net to gross tonnage, we have the following figures upon several of the leading roads, for three years. This information is difficult to obtain: the managers as a general thing do not know how much dead weight they haul: perhaps if they did, they might be stimulated to reform the enormous evil of hauling empty or half loaded cars at the companies' expenses.

Railway.	1860.	1861.	1862.
Boston and Worcester	0.32	0.31	0.31
Boston and Providence	0.29	0.29	0.32
Boston and Maine	0.29	0.29	0.26
Providence and Worcester	0.33	0.31	0.31
Fitchburg Railway	0.32	0.32	0.32

The five roads above noticed, returned the estimated weight of cars hauled one mile, excluding freight, as required by the legislature; but the greater part of the companies do not choose to give this item: whether because unable or unwilling, the reports do not state. Some roads which have previously furnished this item, have failed to do it for 1862. The use of these tonnage ratios must not be misunderstood: it is not an index to the relative deficiency of management, since a road doing a large passenger traffic must necessarily haul a larger proportion of dead weight than a freight road: the ratio above given for the Boston and Maine road illustrates this point; but the figures serve as a guide to the most prominent means of obtaining increased economy, namely, by the reduction of dead weight. The best managed railways in this State haul from four to eight tons of passenger cars, in order to transport a single ton of passengers; and to haul one ton of freight, there is upon an average, two tons of freight cars hauled. The remedy for this evil is twofold; first, the cars must be built of lighter and stronger material; and second, the trains must be so arranged as to be well filled; thus avoiding the transport of empty cars. The comparative cost of operation in detail upon different railways must not be taken as exhibiting the relative quality of the management, without allowing for the very many peculiarities of each road. It is impossible in the present state of our railway returns, to bring all roads to a common standard of comparison. The best we can do is to approximate. At one time, the cost per mile run was the best standard that could be obtained; we can now get from a large part of the reports the cost per ton per mile: but even this cannot embrace the grades and curves, nor the varying price of raw material used.

Names of Railways.	Length. Main lines.	Length. Branches.	Length. Double track & sidings.	Cost.	Capital Stock paid in.	Funded Debt.	Floating Debt.	Total Debt.	Interest paid on Debt.	Dividends paid. (1) Capital stock in Massachusetts, $600,000.
(2) Owned and operated by the New Bedford and Taunton Railway.
(3) Leased to Smith & Longley, for 5 years from June 1st, 1862.
(4) Merged in the New Haven & Northampton R. July 1st, 1862.
(5) Operated under a lease to the Housatonic Railway Company.
(6) Operated by Berkshire, and Housatonic and Berkshire Roads.
(7) Operated by the Boston and Providence Railway Company.
(8) Owned and operated by the Boston and Providence Railway.
(9) Cost in Massachusetts, $115,190; in Rhode Island, $333,051.
(10) Operated by the Eastern Railway Company.
(11) Operated by the Boston and Lowell R. Co.
(12) Operated by the Boston and Lowell R. Co.
(13) Operated by the Nashua and Lowell R. Co.
(14) Operated under lease by the Boston and Maine Railway.

NOTE.—The Net Income, above tabulated, is the amount remaining after deducting the cost of working and the interest paid, from the total income.

Construction of Highways Across Railroad Tracks and Lands.

THE STATUTE OF NEW YORK AUTHORIZING THE CONSTRUCTION OF HIGHWAYS ACROSS RAILROAD TRACKS WITHOUT COMPENSATION DOES NOT VIOLATE THE CONSTITUTIONAL PROVISION AGAINST TAKING PRIVATE PROPERTY. HIGHWAYS, HOWEVER, CANNOT BE LAID OUT OVER LANDS NECESSARY FOR ENGINE AND STATION HOUSES.

An action, in the nature of a bill in equity, was brought by the Albany Northern Railroad Company against the commissioners of highways of the town of Hoosick, to restrain them from opening a highway across their track, and side track and grounds, at their station at Buskirk's Bridge, in that town, and to have the proceedings for laying out the highway adjuged to be illegal and void.

The case was tried before one of the justices of the New York Supreme Court in October, 1855. It appeared that the plaintiff's corporation was established, under the general railroad act, to construct a railroad from Albany to Eagle Bridge, in Rensselaer County; that the company in February, 1853, acquired title to an irregular piece of land at the Buskirk Bridge station on which to lay their track, and also for the accommodation of a station house, and for a side track connected with the main track by turnouts and switches, and also for a turn table, upon which to change the direction of their engines and cars, and for other conveniences for the operation of their road. In June, 1854, application was made to the defendants to lay out a highway across the railroad track, the side track and grounds, which resulted in the laying out of the highway applied for, by an order signed by the three commissioners on the 15th of July following. The highway as laid out, after passing over the two tracks, occupied a portion of the ground to which the company had acquired title, suitable for the site of an engine house, which structure had not then been built, but on which, after the road was laid out and this controversy had arisen, such a building was erected, occupying the entire width of the highway, and it was connected with the turn table by another side track.

The plaintiff neglected to open the road across the track pursuant to the statute, though the commissioners gave them notice to do so, and therefore the commissioners entered upon the

premises, took down the railroad fences, and attempted to construct the highway across the tracks and grounds; but they were resisted by the plaintiff's agents, who excluded them from the premises and put up the fences.

At the close of the testimony, the justice directed a judgment for the plaintiff for the relief demanded. The judgment entered was that the defendants be enjoined from laying out the highway across the plaintiff's premises, and the proceeding by which it was claimed to have been laid out were declared null and void. This judgment was affirmed by a general term of the Supreme Court in the third district; and the defendants then appealed to the Court of Appeals. The following is a part of the opinion rendered at the final decision of the case by the Court of Appeals.

DENIO, J.—I am of opinion that the act of 1853 (ch 26) applies to the case; that it authorized the town authorities to lay out the highway across both tracks of the plaintiff's railroad, and that the statute is not hostile to any provision of the constitution. In terms, it authorizes the laying out of a highway across the track of a railroad; but, if there are two tracks parallel with and near each other, at the point where the highway is to cross, it must pass over both, or it cannot be laid at all. It is within the language of the act, for at each crossing it passes over the track of a railroad. There was, therefore, no objection, I think, to crossing the side track. But the statute declares that the highway may be laid across the track without compensation to the corporation owning the railroad. This, it is argued, is repugnant to the constitution, as the taking of private property for the use of the public without recompensing the owner. Upon this my opinion is, that the railroad companies under the general act do not acquire the same unqualified title and right of disposition to the real estate taken for the road, and paid for according to the act, which individuals have in their lands. The statute declares the effect of the proceedings which it authorizes to be, that the company "shall be entitled to enter upon, take possession of, and use the said land for the *purposes of its incorporation* during the continuance of its corporate existence," and it further declares that the land which it thus appropriates shall be deemed to be acquired, for public use. The title to the land being thus limited to its use for the purposes of the railroad enterprise, it is necessarily subject to the exercise of all those powers reserved to the Legislature to which the franchises of the corporation are subject. If the latter can be restricted or modified by subsequent legislation, the uses to which the land which the corporation has acquired may be changed by the same authority. It has long been the policy of the legislature to qualify corporate franchises in such a manner as to render them subject to the control of the law-making power. For this purpose the Revised Statutes provided that the charter of every corporation which should thereafter be granted by the legislature, should be subject to alteration, suspension or repeal at its discretion. (I R. S. p 600 § 8) Perhaps this provision would apply to corporations created under general laws, which, though not granted specifically and directly by the legislature, are nevertheless, eminations from the legislative power. But the general railroad act itself provides that the corporation formed under it may be annulled or dissolved at any time by the legislature. The effect of this and similar provisions has frequently been before us, and we have held that under the reserved power, the legislature might interfere in many important respects with the powers of corporations, by subjecting them to new restrictions or increased burdens. We have held for instance that the line of a plank road might be extended and its capital increased, and the same thing might be done in respect to a railroad corporation created under a special enabling act; and that a banking corporation, chartered under the general act of 1838, without personal liability of the shareholders, might be so changed as that they should be liable for all the debts of the company to an amount equal to the stock held by them respectively. The change effected in the present case is of slight importance, compared with those which were upheld in the instances referred to. A railroad laid out upon or near the natural surface of the earth may be crossed, without material inconvenience by a common highway, on the same grade with the railroad track. The property of the railroad is not taken away from the proprietors, who are still allowed to use it for all the purposes for which it was acquired from the original owner. Nor is there anything unlawful in obliging the railroad company to make the necessary excavations or embankments for taking the highway across the railroad. The disturbance of the surface of the ground, which has rendered such work necessary, was effected by the railroad itself; and the reservation of legislative authority we may suppose to have been inserted for the purpose of obliging the companies to conform to such directions as subsequent legislatures should discover to be necessary for the public good, or should be required by public policy. The difficulties which arose out of the rule that the grant of corporate power for individual emolument created a contract between the corporators and the state, led to the reservation referred to; and this presents a strong illustration of the wisdom of the legislative policy. The case of Miller *vs* the New York and Erie Railroad Co., (21 Barb,, 513) was adjudged in hostility to these principles, and I think it cannot be sustained.

But the highway was laid out not only across the track of the railroad and the land acquired by the corporation for the purpose of locating their track, but across the grounds which they had acquired as sites of their station house, engine house, turn table, &c., and no provision was made for compensation. The act of 1853 does not, in language or by necessary implication, extend to an appropriation of such land to the purposes of a highway, and it does not fall within the policy which contemplated that the track of the railroad might be so used. The use of the land acquired by the railroad company for its track was such as admitted of a concurrent use for the purposes of a highway; but it was quite otherwise with that which was obtained for the engine house and other structures. As to this, the uses to which it was to be subjected were the same as those which any proprietor of land may be supposed to have for premises purchased by him for building purposes. To run a highway through such grounds is to appropriate the portion covered by it exclusively for a public use. Moreover, such land falls within the denomination of improved land, through which a highway cannot be laid out without an obligation to make compensation. But, admitting that the failure to make compensation, though it would render the appropriation illegal, would not raise such a question as to bring the case within the scope of equitable jurisdiction (as to which I express no opinion), there is still another question, whether the commissioners had any power whatever to lay out the highway over such portions of the land of this company as might be needed for the site of their engine house. I shall assume that the place where that structure was eventually erected was the only position on the land of the company where it could have been placed, and that such a building was a necessary accommodation for the company at that station, and one of the objects for which the land was required. These are questions of fact which ought to have been found one way or the other, by the judge. There being evidence respecting them, we must assume that they were in fact determined by the judge in a manner favorable to the decision which he made. The question is then presented, whether, when a railroad company has acquired the title of a piece of land for the site of a building necessary for its business, the local authorities can occupy the ground for a highway, and thus prevent the company from erecting the proposed building. I am of opinion it cannot be lawfully done. The 57th section of the Revised Statute on this subject forbids the laying out of a highway through any buildings, or any yards or inclosures necessary to the use and enjoyment thereof. (1 R. S. 514) Before this highway was laid out, the railroad company had established their station at this place, and had erected the station house. To the completion of their arrangments for a railroad station, it was essential that they should also have an engine house and a turn table. The remainder of the land—no more having been acquired than was needful—may well be considered as an inclosure necessary for the enjoyment of the building already erected, namely, the station house. The necessity of having the engine house on that spot, and the consideration that it could not be erected elsewhere, shows that the land on which it stood was necessary for the enjoyment of such of the other station buildings as had already been completed. For the disturbance of such an interest as this, under a claim of a right of permanent occupancy, I am of opinion that a suit for an injunction would lie to establish and quiet the plaintiff's title to the enjoyment of the premises for the purposes for which they were acquired and appropriated.

It follows from these suggestions that the judgment ought to be affirmed.

Judgment affirmed.

Railroad from Flint to Fentonville.

We have assurance in which we place the utmost confidence, that the railway connection between Flint and Fentonville, or some other station on the Detroit and Milwaukee Railroad, will be completed early next fall. There is no route in the West, at present unoccupied by a railroad, as favorable for the enterprise as this; and the facility with which capital may be obtained renders the undertaking a mere pastime compared with the difficulties and discouragements encountered by those who have labored so energetically in pushing the Flint and Pere Marquette road to its present extent.—*Saginaw Courier, March* 10.

Pittsburg, Fort Wayne and Chicago Railway.

The general mortgages cover alike the present property of the company and also such as may be hereafter required, and entitle the holders to votes at the annual meeting—the 1st and 2d bond-holders to one vote for every $200 and the 3d bond-holders to one vote for every $100.

The 7 per cent. bonds are convertible nto 6 per cent. bonds unredeemable except by the operation of a sinking fund composed of one per cent. per annum on the amount of such bonds outstanding at each interest period. The sinking fund is also to receive all surplus earnings after paying interest and dividends on stock, the latter in no case to exceed 6 per cent. semi-annually.

The third mortgage bonds are in reality a preferred stock. They entitle the owner after the 1st April, 1862, to such net earnings not exceeding 7 per cent. as may be made in each preceding year after paying interest on the higher mortgages, but in priority to dividends on stock or any expenditures other than such as may be necessary to maintain and renew the railway, its appurtenances and equipments.

ABSTRACT OF GENERAL ACCOUNT, 1856—1862.

31 Dec.	Capital. Shares.	Bonds.	Floating.	Total.	Cost of Road, etc.
1856	$5,994,144	$6,655,500	$689,327	$13,338,971	$12,764,894
1857	6,230,259	7,371,000	1,951,875	15,553,234	14,048,759
1858	6,260,555	8,182,500	2,603,197	17,046,252	14,631,110
1859	6,266,278	8,893,670	1,910,625	17,070,573	15,557,779

St. Lawrence and Welland Canals.

An animated discussion has taken place in the Canadian Legislature on the subject of the tolls on the St Lawrence and Welland Canals, unusual interest being imparted to the subject by the recent movements at Chicago. The Hon. Mr. Rose, in in his speech on the question of reimposing the Canal tolls of Canada, argued in favor of retaining them as they were. Among other things he remarked it had been stated that the trade of the St. Lawrence had very seriously diminished; and in proof of this a table was referred to showing that the tonnage on the St. Lawrence canals for the year 1859, when the tolls were on, was 911,768 tons, and the following year, 1860, after the tolls had been taken off, the total number of tons was 738,596; 1861, 886,908 tons; 1862, 756,870 tons, showing a decrease from 1859 of over 150,000 tons. This was a very grave statement to put thus publicly forth from official records, and tending to show that very unfavorable results had arisen from the reduction of the tolls on those canals—it required to be publicly met. He would now state that instead of a falling off it had been the reverse, and that the party making those returns had made the slight mistake of only 300,000 tons in his returns for the year 1859, which should be 611,768, instead of 900,000 odd. It would therefore be manifest that instead of there being a diminution as to the tonnage on the St. Lawrence canals, there had, in fact, been an increase since the reduction of the tolls. In another portion of the report it is stated that the diminution had arisen from the large quantities of produce which had passed over the American canals and railroads, which had absorbed a large portion of the Western trade. And he proceeds to state that the business on the Provincial canals in the third year of trial had not only failed to reach the same proportional increase as the American routes, but had actually fallen off on the St. Lawrence, where, from the trade being more especially Canadian, a different result should have been produced, if exemption from tolls could have any influence in diverting the American trade into the same channel. What, however, are the real facts of this case? It had been stated that this policy had been unsuccessful, whilst the facts were that the trade of the St. Lawrence Canals had in the period referred to actually increased enormously. He should be able to show that the result of such policy, instead of being disastrous to the increase of the trade, had been such as to exceed the most sanguine expectations of the advocates of that measure. And his remarks referred more particularly to the grain trade. What were these returns of grain at the tide waters, to attract which our efforts had been so many years directed. He would take the port of Montreal by way of illustration, because it was there that the great bulk of the grain was transferred from the Inland craft to the sea-going vessel, and the results would show that the strides had been truly astonishing in the conduct of the Western trade, which sought an outlet to the ocean. In 1850 the grain arriving was 853,000 bushels; flour, 604,000 barrels. 1860—grain, 3,639,146 bushels; flour 608,000 bushels, showing an increase of about 400 per cent. on the article of grain alone. 1861—grain, 10,262,148 bushels; flour, 991,694 barrels, showing an increase of about 300 per cent over 1860 and 12 times over 1859. 1862—grain, 11,163,690 bushels; flour, 1,144,752 barrels. But, further to test the accuracy of the statements, he would refer to the shipping, which would show whether or not the majority of that Western trade had been diverted from our waters. It was he understood the fact that at Quebec there were at the present moment, forty-five large merchant vessels on the stocks, many of which were no doubt intended to be freighted with grain, &c., the product of the Western trade. This branch of industry, like many others, was stimulated by the increase in the trade. The same results were shown in the increase of Foreign Shipping at the Port of Montreal—the bulk of which it is well known is engaged in the grain trade. In 1859 the tonnage was only 94,660. In 1860 it rose to 121,000. In 1861, to 261,793, and in 1862 to 266,243. There was he believed an equally remarkable increase in the draught or carrying capacity of the Inland craft, which was estimated in 1859 at 392,000, while in 1862 it was equal to 1,319,000, and with this difference that while in 1859, it was languishing and not half supported, it was now insufficient to meet the increased demand upon it. The storage and elevating power had increased, he believed in the same ratio. Lest it should be considered unfair to take the year 1859 as a starting point, he would take the average of the three years preceding that with those of the three years succeeding, and the result showed an increase from 5,552,000, during the first epoch to 25,000,000, during the last. And here it must be remarked that as regards the increase in the Erie Canal, it was due to fact to state that in 1860 the tonnage capacity on vessels was increased 80 per cent, and vessels which before that period were only 120 tons, had been increased to 210 tons each vessel. It would thus appear that the reasoning of the Commissioner of Public Works, was wholly based on inaccurate data, and though his report left it to be inferred that the past policy had done nothing to attract Western trade, the facts to which he (Mr. R.) referred, proved the very reverse. And under these circumstances, with such an expansion of our trade, was it wise to sacrifice a future good by the impolitic act of a reimposition of the Canal Revenues. The whole of the argument put forth, as to the decrease of our trade on the canals, had been founded on a false premise or error, as previously stated, of 300,000 tons, commencing with 1859, and the argument had been taken that the trade of the Erie Canal had increased, whereas the difference had arisen from the increase of the tonnage of their vessels from 120 to 210 tons. He (Mr. R.) had recently received a very interesting letter in reference to the produce raised in the Far West, being 100 millions of bushels per annum, but it stated that it would be quite useless their continuing the cultivation of their rich prairie lands, unless they could go down our canals to the Atlantic at the rate of 25 per cent cheaper than they were at present paying on the Erie Canal. Such being the facts of the case, it was obvious that this was not the time when we could prudently throw any obstacles in the way of this trade by the imposition of duties, as we ought rather to endeavor to attract that trade by every means in our power, it being a well known fact that this immense produce of the West was blocked up and unproductive for the want of an outlet, and it was obvious that outlet was the noble valley and waters of the St. Lawrence. And it was also obvious that if we once secured the trade of this Far West through our waters we could then reasonably and justly impose such slight duty by way of tolls as would reimburse us for our outlay, after we had established the practicability of the route, before which it would be very impolitic to take any legislative action upon the matter.

Railroad Earnings---Weekly.

The traffic of the Great Western Railroad for the week ending March 20, 1863, was as follows:

Passengers	$20,968 16
Freight and live stock	50,606 59
Mails and sundries	1,201 94
Total	$72,776 69
Corresponding week of 1862	49,799 03
Increase	$22,977 66

The earnings of the Grand Trunk Railway for the week ending March 21, 1863, were:

Passengers	$23,316 48
Freight and live stock	66,884 91
Mails and sundries	3,550 00
Total	$93,751 39
Corresponding week, 1862	65,789 16
Increase	$17,962 23

The earnings of the Galena and Chicago Union Railroad for the 3d week of March, 1863, were:

Freight	$22,609 33
Passengers	8,394 81
Mails	1,250 00
Total	$32,254 14
Same week, 1862	17,984 83
Increase	$14,269 31

The earnings of the La Crosse and Milwaukee Railroad for the 3d week in March, 1863, were $13,507 13
Same week, 1862 10,538 83
Increase $2,968 30

The earnings of the Chicago and Alton Railroad for the 3d week of March, 1863, were:

Passengers	$13,485 35
Freight	12,999 29
Sundries	1,035 83
Total	$27,520 47
Same week last year	14,400 81
Increase	$13,119 66

The earnings of the Illinois Central Railroad for the 3d week of March, 1863, were $61,857 14
Do., 1862 33,315 80
Increase $28,541 36

The earnings of the three weeks of the month have been $179,735 49, against $181,083 24 for the whole month in 1862.

The earnings of the St. Louis, Alton and Terre Haute Railroad for the 3d week in March, 1863, were $24,655 57
Same week, 1862 14,092 57
Increase $10,563 00

The three weeks of the month give $75,157 21, against $46,297 78 last year, an increase of $28,859 43, about 60 per cent.

The earnings of the Toledo and Wabash Railroad Company for the 3d week of March, 1863, were $24,668 64
Same week, 1862 12,094 13
Increase $12,564 51

The earnings of the Chicago and Northwestern Railway for the 3d week of March, 1863, were $19,978 08
Do., 1862 12,896 76
Increase $7,081 32

The earnings of the Cleveland and Toledo Railroad for the 3d week of March, 1863, were $38,913 00
Same week, 1862 24,450 00
Increase $14,463 00

The earnings of the Chicago and Rock Island Railroad for the 3d week of March, 1863, were $29,800 00
Same week, 1862 15,439 00
Increase $14,361 00

The earnings of the Michigan Central Railroad for the 3d week of March, 1863, were $54,569 00
Same week, 1862 37,945 00
Increase $16,524 00

The earnings of the Milwaukee and Prairie du Chien Railroad for the 2d week of March, 1863, were $9,889 37
Same week, 1862 10,461 16
Decrease $571 79

American Railroad Journal.

Saturday, April 4, 1863.

Stock Exchange and Money Market.

Within the last few days, the price of gold has risen to 159¾ bid, after intermittent falls to 147; and exchange, which also fluctuated, was on Wednesday quoted at 171½. The reason of this advance is alleged to be principally, that the dry goods interest and the produce dealers have attempted to keep up the rate of exchange; the former, that there may be no fall in the price of their goods, and the latter, that the profits of exports may be maintained by buying and shipping produce at paper currency rates, and realizing sterling at good prices abroad. Beyond all question this arrangement is a very good one for those who know how to conduct it, and what to a fraction is to be gained or lost in such operations. But the high price of goods is a serious detriment to consumers, and it is for their interest that gold should fall, and exchange with it. And to this complexion they must come at last, how soon, no one can tell.

On Wednesday, the Secretary of the Treasury was ready to pay off $3,066,000 April interest on the 7 30's, in this city and other places. It is also decided at Albany that the interest on the State stocks now falling due shall be paid at least to foreign holders, in coin. The dividend due on the State public debt is $392,634 14, of which only $25,000 is due to the foreign holders, a much smaller sum than was generally supposed. Governor Seymour in a brief message, recommend-

ed strongly the payment of the whole interest in coin. The resolution passed in the Senate after receipt of the message, limited the payment of the interest to the foreign holders; that which was adopted in the Assembly, authorised the payment of all creditors, in coin, except incorporated banks, banking associations, and other corporations existing under the laws of the State. This was done on the principle, very justly too, that as the banks did not pay specie to their creditors, they had no right to expect it from the State. Large amounts of coin are therefore being distributed as interest, and coming upon the market. It would seem impossible for gold to rise much higher in the face of such a movement. It is also understood that some of the street speculators have defaulted in their specie contracts to the extent of $400,000, and more will probably follow.

We are inclined to believe that a foreign loan will fall within the policy of the Secretary of the Treasury. If the terms of conversion can be made satisfactory, we expect that both gold and exchange will feel the consequences of an addition of a hundred millions of actual money, to the present resources of the Treasury. This will be a two-edged sword, cutting the bullion and coin merchants, and also the bill drawers, each class having a peculiar interest of their own, and both making the most profit when their commodities are scarce and rising. A foreign loan well-negotiated would beyond all question bring gold down to nearly the old prices.

It is announced by the latest journals from abroad, that the Confederates have at last succeeded in getting a small loan started in France to be sustained in England, for the sum of fifteen millions of dollars. It is floated at 90 per cent., 7 per cent. interest; is to run twenty years, and is secured by a paper hypothecation of cotton, to be delivered at the Southern ports on demand, or six months after a peace, and to be then and there taken at 11 cents a pound in lieu of money, at the option of the holders. It is understood, however, that this loan will not be recognized by the regular Stock Exchange, either in London or Paris, at least for the present. We attach no importance however to the transaction, beyond the circumstance that it will enable the Confederates to obtain some more vessels like the Alabama and Florida, which already are more than a match apparently for our whole fleet of four hundred vessels, and run in and out of every port in the West Indies when they please. If the Secretary of the Navy would keep two cruisers constantly off *each port*, the result would be different. But at present the plan appears to be sailing on great circles and never arriving anywhere. The plan then to discredit Confederate loans abroad, is to be arranged at the Navy Department.

The National Banking Law is beginning to attract attention, and is growing in favor. A summary of its provisions carefully prepared by an experienced banker of this city will be found in another column.

It was at one time feared that the Superintendent of Banking in this State intended to hazard a conflict between our own system and that of the Treasury. We are glad to perceive a law has been introduced into the Legislature, which will harmonize the two systems of finance.

We think, from the position taken by the Superintendent of the Bank department in his annual and recent reports he has imagined difficulties not very likely to arise. A bank organized under the act of Congress is an institution with duties, powers and responsibilities as plainly marked out as the English language will permit.

A banking association under the laws of the State of New York is also as clearly defined and understood in its character and powers. There is no clash between them, nor need there be. Each base their issues upon registered securities, which can not be used as a second basis of issue as long as the Bank department holds them in pledge.

The business, transactions, circulating notes are distinct, and will be kept so, as much as the affairs of individuals. And if any association under our State laws wishes to wind up its affairs, and re-organize under the act of Congress, beyond all question the vigilant Superintendent will take due care of the public interests. On the other hand, no such association need wind up its business unless it chooses, and none will, if it is making money as fast as it desires under the old system.

The real trouble in this case appears to be his fear, that the power of taxation will be carried to a prohibitory extent against the local banks; but we entertain none whatever. The taxes must bear on all alike. The Superintendent asserts that the new system will be unfavorable to village institutions, and states the case of one, with a capital of $150,000, having a circulation of $160,000, and holding $330,000 in U. S. securities, on which it is receiving interest. No such institution could very well exist under the law of Congress as we understand it, and the fewer such there are to be, the better. The profits on such institutions may be curtailed by the change of system, but the public will be far more secure. In short, we see no necessary conflict of jurisdiction to arise. If there should be, the laws of the U. S. particularly in the case of the Currency, must prevail over any State; but if the Legislature pass Mr. Van Dyck's harmonious provisions into a law the danger will altogether disappear. Capitalists and bankers are sharp enough to see what their interest is, and we may safely trust them with the disposition of their money.

If the law of Congress gives the bills of the National Banks a currency all over the Union, by receiving them for its ordinary dues and taxes, it will be giving the people an immense advantage; such as the local institutions could never offer or obtain, and it is this which particularly recommends the new system to every reflecting mind.

We may even contemplate the time when our currency will be entirely of a national character, and we shall want no Bank Superintendent at Albany at all. Perhaps this may explain some of the alarm felt there just at this moment.

Mr. Chase has been announced to visit this city for some days past. We have no doubt he will come or not according to circumstances. The absorption of the 5 20's, the payments at the Custom Houses, and the very large sums received weekly from the Internal Revenue, place the finances of the Government in the best practicable position, and are in striking contrast with the financial condition of the principal European treasuries, all of them depleted even now in time of peace, and with a home war commenced which will shake Europe to its centre.

We understand that a number of speculators having obtained about $30,000 of the notes of two of the principal banks in this city, have protested them for non-payment in specie, and applied to the Bank Superintendent to proceed against them. As these Banks offered to redeem with legal tender notes, they are determined to test the new question raised against them. At such a time as this, those persons are justly censurable who would attack Institutions of their undoubted solvency and high character, for the purpose of creating fresh and unpatriotic disturbance in the market, already in sufficient uncertainty.

The week's exports exclusive of specie continued large viz., $4,534,075 against $2,330,060 the same week last year.

We publish in another part of the JOURNAL S. Hallett & Co's *Circular* on the subject of the Gold question. It is written in a philosophic spirit, and is a complete refutation of the idea too prevalent, that gold is the master, instead of the servant, and its concluding sentence in reference to the speculators in the article, has proved prophetical in the case of some heavy operators to whom we have already alluded.

Holders of the coupons of the first mortgage bonds of the Green Bay, Milwaukee and Chicago Railroad Company falling due April 10, 1863, are requsted to present them for payment at the counting-house of Schuchardt & Gebhard No. 21 Nassau st., where past due coupons of said bonds, and past due coupons of the City of Milwaukee, issued to the said Company, will also be paid on presentation.

The interest due April 1, on the first mortgage bonds of the N. Y. and New Haven Railroad Co. will be paid at the Bank of the Republic.

Coupons for interest on the income bonds of the Chicago and Alton Railroad Co., for the three months to March 31, 1863, will be paid on presentation at the Agency of the Company, Room No. 9, No. 25 William st., New York.

The Panama Railroad Company have declared a quarterly dividend of 3 per cent, and of 1 per cent additional from the earnings of the steamers, payable 6th of April and afterward.

The Cleveland and Toledo Railroad Company have declared a dividend of 4 per cent payable on the 22d of April free of Government tax.

The interest due April 1st, on the Mortgage Bonds of the the Syracuse, Binghamton and New York Railroad, will be paid at Continental Bank, New York, on presentation of coupons.

All due coupons of first mortgage bonds of the Dayton and Western Railroad Company will be paid on presentation at the Manhattan Bank. All outstanding first mortgage bonds of the company which have not been by agreement extended will be paid on presentation at the office of the company at Dayton, Ohio.

The Chicago and Rock Island Railroad Co., have declared a dividend of three per cent, payable on the 16th inst.

Notice to Contractors.

The Camden and Amboy Railroad Company invite proposals for the *Grading* of a double track railway from Trenton to Dean's Pond, a distance of 17 miles. The time for receiving bids is limited to the 18th inst. Plans, profiles, etc., will be ready for inspection on the 9th.

Placerville and Sacramento Valley Railroad of California.

We have received the report of FRANCIS A. BISHOP, Esq., Chief Engineer, containing the survey, cost of construction and estimated revenue, of the proposed Placerville and Sacramento Valley Railroad, being a part of the route through El Dorado County, crossing the Sierra Nevada, on the line of business from San Francisco to the silver mines of Nevada Territory, projected to meet the great and increasing wants of that part of the country, for greater facilities of transportation.

After numerous careful surveys, the line adopted is that commencing 700 feet west of the western boundary of the City of Placerville, at a point 1,850 feet above high tide at the City of Sacramento. It follows the valley of Placer Creek, then crosses, and enters the valley of Weber Creek, thence to the valley of the Gold flat, thence to and down the Indian ravine, to the Empire ravine, and crosses the Placerville and Folsom road near the town of El Dorado; it then crosses the Slate Creek, and gains the dividing ridge between the waters of the Cosumnes and American rivers at the Mountain house. Thence passing around the ravine, it descends gradually to Buckeye flat, deflects to the south and gains the crest of the spur dividing the waters between Deer Creek and Big Canon; thence along the west slope of the spur, it descends until it reaches the summit of the divide, west of the Spring Garden Store in Hunter's ranch; then along the East side of the ridge across the Cosumnes Valley, to a point opposite and west of Hitchcock's house. It then proceeds to Hitchcock's Summit, a crest of the spur dividing the waters of Indian and Clark's Creeks; thence from the summit, westwardly to Atkinson's ranch at the head of Hog gulch, and along the west slope of the ridge to the summit of the divide at Miller's Corral. Then from the Corral along the east slope of the ridge, it crosses a deep and narrow gulch to be passed by trestle work, and curves to the south west, and crosses the Cosumnes Valley road to the head of Morrill's Creek, entering the Deer Creek bottom, crossing the Deer Creek by a bridge 150 feet long. Keeping the same general direction, the line ascends to the summit of the divide between Carson and Deer Creeks, descends to Carson Creek, and ascends again to near the White Rock House. It again descends to the summit which divides the waters of Alder and Willow's Creeks, and crossed by the Natoma Canal, thence to Willow Creek along its right bank, until it debouches into the valley of the American river near the Lexington House on the Sacramento and Coloma stage road. From this point it can unite with the Sacramento Valley Railroad in the town of Folsom, within a distance of about 4,500 feet.

The whole distance from Placerville to Folsom is 34.86 miles.

The grades vary from level to 95 feet per mile.

The estimated cost of the whole line is as follows:

Construction	$933,927 28
Buildings and fixtures	22,000 00
Locomotives and cars	113,600 00
Right of way, fencings and contingents	50,000 00
	$1,119,527 28

After careful examinations and estimates founded on the existing freight and travel to be diverted to this road and the population dependent on it, the following calculation is made of the receipts, expenses, and net annual revenue:

Receipts:

40,000 through passengers $3	$120,000
20,000 " Amador Co., $1.50	30,000
20,000 other local travel for 10 miles, $1	20,000
54,750 tons through freight at $5	30,000
3,000 " Amador freight, $2.25	6,750
13,500 " freight from Cosumnes Valley $3	40,500
5,000 cords of wood, $1	5,000
Mails and express	7,500
Total receipts	$533,500

(This estimate is founded on the rates allowed by law; passengers 10 cents per mile, freight 15 cents per ton per mile.)

Current expenses:

Motive power	$70,000
Repairs of rolling stock	18,000
Salaries, wages, incidental expenses, chargeable to passenger department	10,000
Do. freight	30,000
Repairs of road, and fund for renewing superstructure	35,000
Salaries of officers and law expenses	30,000
Total current expenses	$193,000

Balance net revenue, $340,500, or 22 7-10ths per cent. on the capital stock of $1,500,000.

The plan appears to be first to construct the division of the road extending from Folsom to Miller's Corral, a distance of 15.16 miles, which will cost $363,086 36. It is well ascertained it will secure the traffic for Placerville, Nevada Territory and intermediate points, and also a large business from Amador Co., and that the revenue will on this portion alone when finished, be 36 4-10ths per cent. on the cost.

One singular feature in the construction of this road, is the adoption of the hydraulic system, in making the heavy cuttings and embankments along the line, instead of employing laborers in the usual manner. As water with a head of from 50 to 300 feet can be had along the greater portion of the line, it is proposed to carry it there on flumes, and direct it in flexible hose, as is now done in the mines, against the earth material to be removed. A "hydraulic" using 150 inches of water with 140 feet head, working two pipes with 2¼ inch nozzles, and four men, will remove 800 cubic yards of earth a day, at about 4¾ cents per yard. It is also found that earth washed into valley embankments from the cuttings by this process is more compact and gives more uniform gradients.

The report contains carefully prepared estimates of the amount of business to be anticipated from all sources, and the amount now actually existing on the line proposed to be constructed. This business includes that of the Washoe and Nevada districts, which even now supports lines of stages; the route is crowded with travellers, teams and freight, the latter amounting to ten millions of pounds per month. The transportation of the latter over the Placerville road cost 7 and 8 cents per lb. The receipts of the stages are even now $405,150 per annum. The total amount of silver bullion brought down by express for 10 months in 1862, was 150,000 lbs. It is estimated by Wells, Fargo & Co., the carriers of the gold and silver of the region about to be affected by the proposed railway, will reach in 1866, the sum of twenty-five millions of dollars.

It is very evident from the report that the mineral wealth now rapidly developing in Nevada Territory, and the increasing demand for supplies consequent on the increase of population, require that Placerville as a commercial centre shall have a proper outlet to the navigable waters of the country, and the necessity plainly shows that the work will be largely remunerative.

We are pleased to perceive that on the Pacific coast the railway spirit is in full activity, and various important and remunerating projects are already under way. We commend this of the Placerville and Sacramento Valley Railroad to the careful attention of those capitalists, who, having made their fortunes in good investments of this character, can appreciate the advantage of another good opportunity.

Marquette and Ontonagon Railroad.

There is a movement on foot at Lansing, in the Michigan Legislature, to put the grant of land to aid in the construction of this road into new hands—such hands as will insure its completion. The materials of the new corporation are not yet known, but the Marquette *News* hints at Wm. B. Ogden, Edwin Parsons, and other well-known capitalists and railroad men, who possess the means, and whose interest it is to finish the road at the earliest practicable moment.—*Buffalo Com.*

The Gold Question Considered.

In the month of January 1848, gold was discovered in the valley of the Sacramento, and in 1851, in the Turon in Australia. From these discoveries came the most momentous results. The commerce and exchange of the world immediately took a new form and aspect. Fixed properties with long ascertained income, which relied for stability and perpetuity "on the assumed limitation in the supply of gold," were unsettled by the new disturbing forces. Learned speculations on the probable depreciation of general values, poured forth from the European press, and at least one continental Government, famous for its time-honored and well-governed bank in Amsterdam, adjusted by law under the influence of alarm, the growing disproportion between gold and silver.

While the theorists, the "moneyers," the men of the mint, and financiers of all nations were speculating on the future of the wonderful present, the practical effects were seen in the immediate movement of millions of human beings to improve their condition by emigration to the countries where gold sparkled in the sands, and fell in ounces out of the fissures of the rocks. Hundreds of thousands destined to the workhouse while living, or to the graves of paupers when dead, to borrow the language of a British reviewer "escaped to happy homes in distant and previously unexplored solitudes, which assumed as by the wand of enchantment all the improvements of an age unexampled in progress." "The superfluous emigrant went off to become a wealthy customer, the relieved operative at home remained to be a busy supplier." States under the new impulses were born in a day, and commerce, spreading all its sails, hastened to oceans hitherto scarcely disturbed by its keels, and the whole commercial world began to watch the arrivals of golden cargoes with an interest which threw into obscurity the days of the plate ships and galleons of old Spain.

The daily practical consequence of this production of gold, leaving out of view its relations intrinsically with other properties, is what the banker has now chiefly to consider, since it is his function to study the amount of supply and demand, to see where its excess is likely to be absorbed, how much is required to settle the balance of indebtedness between the nations that are eager sellers and liberal consumers, each under different political and economical systems; what portion will be required for the public service, and what is necessary to ensure the received and apparent value of the paper currency. Particularly has the American banker need to weigh well the circumstances which surround him, as his relations with the Government have assumed an unusual importance, from the fact that it is engaged in a struggle, which, for a retrogressive policy on the one side, and for a noble adherence to the cause of freedom and republicanism on the other—an issue the determination of which will not only test the wisdom of our fathers but our own—has had no parallel in history. To this contest he will remember we were hurried without preparation, indeed without suspicion of its long concealed purpose; without armies, navies, or money, with the feeling of the old world against us, to which our institutions had long offered a silent but eloquent rebuke, with the foreign banking houses closed against us, and capitalists withdrawing, from whatever motive, their previous investments in our national funds. And yet with all this disadvantage, and compelled by the obligations of the constitution to save the Union at all hazards, compelled also by the alternative of life or death to leave the attitude of defence for that of repression, we stand at this moment under all these unfavorable combinations in a position which may challenge the admiration of the world. A large portion of the territory which was coerced into the rebellion against the Union has been recovered, restored and re-occupied under the constitution. The whole confederacy has been surrounded, permeated, cabin'ed, cribbed, confined, while its strength in all forms, and shapes and devices is wasting away, without any natural causes for its re-growth and restoration, the bone, muscle, sinew, blood, disappearing in the drain on its vitality, while we in a good and just cause are rising refreshed from the struggle, and gather fresh resolution even from our disasters; lessons, not finalities, they make not the least difference in the final result.

Those then who argued that the possession of large amounts of gold in the vaults of the treasury, that an extensive foreign credit, or even that the stability in the price of gold, or of exchange, were essential pre-requisites to the support of the war, and the preservation of the Union, have discovered they were entirely mistaken. The wealth and power of a nation are not in the precious metals. No census ever enumerates these.

To guide our opinions to a just estimate of the office and comparative value of gold, let us briefly recur to the past.

The discovery of the gold mines of America in the 16th century, reduced the value of gold and silver about one-third of what it had been before. The quantity previously in circulation as estimated by Mr. Jacob, was £34,000,000 in coin alone, and the amount in plate and hoards £150,000,000, of which £20,000,000 was in gold. According to Humboldt and other similar authorities, the total amount brought from America to Europe by the Spainards from their discovery to 1803, was about three hundred and seventy-five millions in gold, and twelve hundred and eighty in silver.

Up to the discovery of the California mines, the annual receipts of gold and silver from all these known sources was about six millions per annum of gold, and eight millions of silver. Professor Ansted in 1849 showed the sources of the supply at that period were as follows:

Europe, excluding Russia	£200,000
Siberia	4,000,000
Asia, excluding Siberia	500,000
Africa	400,000
North America	200,000
South America	1,200,000
	£6,500,000

Since then, the amount of gold added to that in use and circulation, and taken from the mines of California is estimated to be about nine hundred millions. It has been truly stated by well-known authorities that the real wealth of a nation is seen in the goods and property it possesses, and not in the money which circulates them. And these possessions are the result of one condition in human existence, and this is labor, which is the master of all that can be acquired, and without which, no positive and fixed values could be created. Gold and silver are the smallest part of the wealth of a nation, and to use the words of Adam Smith "the attention of government was never so unnecessarily employed as when directed to watch over the *preservation* or *increase* of the quantity of money in any country." We have a case in point. At this moment the Canadas are overflowing with specie, it is there literally a drug, yet no one pretends that these provinces are any richer or poorer than they were a year or two years ago. There is still another and stronger illustration. In California, a paper currency has never existed, yet there is not a country in the world where fluctuations in the value of property have been more sudden, violent or disastrous.

To apply the wisdom of history and experience to our own financial position, and particularly to the money market, so called, we may remark that those Banking and other Institutions which hold large amounts of gold as a show and evidence of solidarity, mistake the functions both of their treasure and themselves. The real prosperity of a Bank is indicated by the amount of its bills receivable, which are the representations of property in transition. And it has been therefore said, that the only thing in the world of a commercial nature which is truly at par, is a merchant's bill that *will be paid*.

The object of Bank loans is to stimulate commerce generally, not to glut it in any direction, and beyond all question, the hoarding of gold by the banks, and making that one commodity their favorite and preferred security, has damaged all other securities, and impaired and hindered all kinds of legitimate transactions.

It appears on the whole, then, that gold has seen its highest rates, unless something very extraordinary and disastrous should occur against all present probabilities.

1. Because there is a growing and settling confidence that this contest is to terminate in favor of the Union.

2. Because of the evident conclusion of the British Government not to meddle any further in our affairs, beyond what can be explained or excused by diplomatic skill.

3. Because the insurrection in Poland and its complications with Austrian, Prussian, and French as well as Russian interests, must preoccupy the attention, and retain at home the thoughts of the unfriendly European powers.

4. A wholesome reaction is taking place among ourselves from these and various other convictions, as is evident from the fall of gold, the rapid conversion by millions of legal tender notes into 5 20's, in the daily acquisition of specie by the Government for duties, without the least disturbance in the market, in the probabilities of decisive victories and advantages in the South West, which will liberate an enormous quantity of cotton to act at once upon exchange, and finally because from the lessons taught by the recent fall in gold, it is obvious that those who worshipped it as an idol without knowing its real place or power, have been too severely scorched at its altar to offer it many more sacrifices.—*Samuel Hallett & Co.'s American Circular.*

The National Bank Bill.

We have studied the National Bank law, with a view to the proceedings necessary for organizing Banks under it.

Banks in cities and villages of over 10,000 population must have at least $100,000 capital. Banks of $50,000 can be started in places of less than 10,000 population.

Thirty per cent of the capital must be bona fide paid upon the start, and 10 per cent of the capital must be paid up every 60 days thereafter, until the capital is all paid up.

United States stock, to the amount of 33 per cent of the capital paid up, must be deposited with the United States Treasurer as security for circulating notes, and 90 per cent of the market value of the stocks deposited will be furnished to the banks in such notes.

To start a $100,000 bank, $30,000 cash and 11,000 circulation is the minimum required to begin business on. One-half these amounts is sufficient for a $50,000 bank; but it should be remembered that the law imperatively requires the capital

stock to be paid up to 10 per cent every 60 days, and as fast as capital is paid in, circulation to an equal amount can be obtained.

A bank cannot put out a circulation greater than the capital actually paid in.

The circulating notes must be fives, tens, &c. No notes under fives can be issued.

Banks of not over $100,000 capital can have 90 per cent of their capital in circulation, at 1 per cent per annum tax.

$200,000, 80 pr ct., at 1 pr ct. tax per annum.
$300,000, 70 pr ct., at 1 pr ct. tax per annum.
$500,000, 60 pr ct., at 1 pr ct. tax per annum.
$1,000,000, 50 pr ct., at 1 pr ct. tax per annum.
$1,500,000, 40 pr ct., at 1 pr ct. tax per annum.
$2,000,000, 30 pr ct., at 1 pr ct. tax per annum.
Over $2,000,000 capital, 25 per cent.

We may say, practically, all National Currency is taxed but one per cent, though anything more than the above per centage to capital must pay two per cent. This same scale of taxation applies to State banks.

The National Banks are not put to any expense for plates, paper, or printing. The Treasury Depart furnishes the circulating notes without charge, and is benefited in turn by the tax, and the lost circulation in case the Bank is wound up or closed by process of law.

Every Bank started under this law, whether it has few or many stockholders, whether it is controlled by one man or many, must be looked upon as a legitimate institution, from the fact that the capital must be paid up under oath.

The smallest number of associates is five, and the Bank must have not less than five nor more than nine Directors. Each Director, in Banks of not more than $200,000 capital, must own at least one per cent of the capital stock, and Banks of larger capital can have Directors that only own one half of one per cent of its capital stock.

We feel perfectly competent and willing to assist any association or party in organizing a bank.

Banks under this law are permitted to do almost any business that brokers and private bankers can do. The law makes the rate of interest established by the State law where the bank is located, the legal rate for the bank's business, and provides that the interest may be taken in advance. The purchase or sale of exchange at the current rates cannot be termed usury.

It is so cheap to organize under, and so easy to get out of this system of banking, that we expect to see it have a popular run—at least so far as to test its real merits. The advantage given to the National Bank circulation consists in its being a legal tender for all Government dues (except duties on imports) and it is a legal tender for all Government disbursements (except interest where gold is to be paid).

The National Banks can be made Government depositaries, and financial agents of the Treasury. —*Thompson's Bank Note Reporter.*

Hartford, Providence & Fishkill Railroad.

The receipts from operations of this road for the year ending September 30, 1862, were as follows:

From passengers		$160,632 33
" freight		130,070 14
" mails		9,300 00
" express, rents, etc		11,201 71
		$311,204 18

And the expenses were:

Repairs of road	$47,598 37	
" equipment	25,501 45	
" bridges, etc	10,223 08	
Salaries and labor	57,569 26	
Wood, coal and oil	32,573 04	
Rent of stations	4,669 95	
Insurance, taxes, etc	3,109 48	
Miscellaneous	3,040 95	
		184,285 58
Net earnings		$126,918 60

The financial condition of the company, October 1, 1862, is shown in the annexed Balance Sheet:

Capital stock—common		$1,537,939 98
" preferred		398,800 00
Bonds		2,037,500 00
Notes and accounts payable		211,574 53
Premium and interest on bonds sold, issued by cities of Hartford and Providence		120,324 84
Profit and loss		121,154 74
Cancelled bonds paid by trustees		52,230 00
		$4,459,524 09
Construction	$3,902,355 46

Materials and supplies delivered to trustees	29,348 20	
Sinking fund—city of Hartford	60,351 42	
" city of Providence	48,500 00	
Sundry notes and accounts	112,817 44	
Sundry claims and vouchers	3,640 64	
		$4,459,524 08

The Ottawa Canal.

The Montreal papers are calling attention to the proposed new water route between Chicago and Montreal by the way of the Ottawa. They claim that from Chicago to New York via the Ottawa Canal, it is 257 miles nearer than by Buffalo and the Erie Canal.

The total distance between Montreal and Lake Huron, is 430 miles. The total number of miles of canal required is 58, including the Lachine Canal.

If our readers will follow the present route on the map, he will have a good idea of what nature has done towards furnishing an outlet to the sea.

First, the French River:

	Miles.
Natural Navigation	49
Canal	1
Lake Nippissingue	30
Summit Barrier Canal	5
To the mouth of the Mattawan:

Railroad Consolidation.

The arrangement for the consolidation of the earnings of the Cleveland and Pittsburg, and Pittsburg, Fort Wayne and Chicago Railroads has at length been perfected, the Fort Wayne Company having receded from the amendments introduced by them in the contract. As the agreement now stands, ratified by the two companies, the gross earnings of the two roads are to be consolidated, and divided between the two at the rate of 26½ per cent. to the Cleveland Company, and 73½ per cent. to the Fort Wayne Company. Each road pays its own expenses, and preserves its own management and officers intact. The Presidents of the two roads act as an Executive Committee, and their first act was to confirm the present general officers of both roads.

The Cleveland and Pittsburg road continues to pay for the lease of the joint track from Rochester to Pittsburg, but will in future carry passengers between points on the leased line, the same as the Fort Wayne line, the receipts going into the joint fund. The two roads are to be run to their mutual benefit, freight being sent over the route that will best serve the purposes of the shippers and at the same time conduce to the greatest profit of the joint fund. Passengers can purchase tickets by whichever route they choose.

The contract can at any time be terminated by the joint action of the two Boards. It goes into effect on the first of April.—*Cleve. Herald.*

NOTICE
TO
RAILROAD CONTRACTORS.

PROPOSALS will be received at the Company's office at Bordentown, New Jersey, until the 13th of April next for the GRADING of a Double Track Railway from Trenton to Dean's Pond, a distance of 17 miles, (where it intersects the Double Track to New Brunswick) on the Branch of the Camden and Amboy Railroad.

Plans, Profiles, and Specifications, can be seen at the office by the 9th of April, when the line will be ready for inspection.

SUBSTITUTE FOR

CAR DUCK.

Kingman's Car Covering.

THIS is a kind of Elastic Mastic, a thick coating of which is applied to the top of the Car, and into it a heavy Burlap or Bagging is imbedded and thoroughly painted, thus making a covering VERY MUCH LIKE CAR DUCK, but at this time at half the cost. It is now successfully used by several New England Roads and Car builders. Directions and particulars sent when requested. This Mastic and Burlaps for sale by

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & CO., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT RE-OILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.

Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

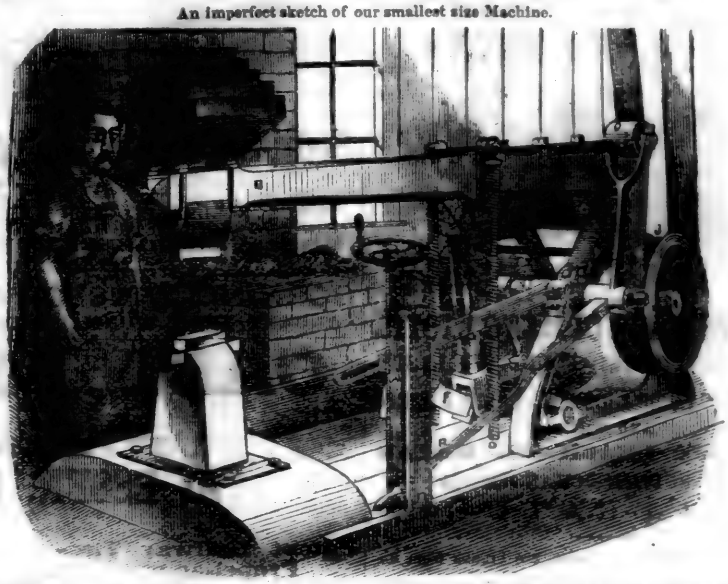
ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past ten years, with uniform success, they confidently offer their services to those requiring such aid.

VENTILATION.



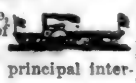
THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS,** etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

Address **HENRY RUTTAN,**
Coburg, Canada.

AMES IRON WORKS,
OSWEGO, N. Y.,

SOLE AND EXCLUSIVE OWNERS AND MANUFACTURERS, UNDER PAYE'S PATENT.

An imperfect sketch of our smallest size Machine.



PAYE'S PATENT FORGE HAMMER. A HAMMER ADAPTED TO BOTH HEAVY AND LIGHT FORGINGS, with an adjustable stroke of from one inch to three feet. This hammer is adapted to both heavy and light forgings; the force of the blow being entirely at the will of the operator, and for all forgings under six inches, either round or square, is the best hammer now in use, and requires but one-half the power used by every other hammer to do the same work. For an engraving and description of this hammer, see page 1, Vol. V (new series) of the SCIENTIFIC AMERICAN; some valuable improvements have, however, been since made. All communications should be addressed to H. M. Ames, Box 422, New York, or Ames Iron Works, Oswego, N. Y.

These hammers may be seen in operation at the Allaire, Neptune, Secor, Delamater, Fletcher & Harrison, Duncan & Crampton, Anderson & McLaren, Duhurst & Emerson, Charles T. Porter, all in New York City; Joseph Colwell, Jersey City; Wm. White, Newark, N. J.; Providence (R. I.) Tool Co.; Whiting & Wilcox, Kaigh's Point, Phila.; Mallory & Cottrell, Mystic, Conn.; J. Dillion, Bondout; James Horner & Co., Sing Sing; Henry Kaler & Co., Brooklyn; James B. Ends, St. Louis, Mo.; Central Railroad Shop, Albany; Burlington, Quincy & Chicago Railroad Shop, Ames Iron Works, Oswego; M. Guinness, Albany; Sweet Brothers, Syracuse.

SPERM, WHALE, LARD AND OTHER OILS,

For Railroads, Steamers, Machinery and Burning.

An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house, it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, 25 cents, Brass, **31** cents; Silver-Plated, **50** cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of **$1.25.**

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

BOARDMAN'S
Patent Steam - Boilers

SAVE over 30 per cent. of the fuel required for fine or plain cylinder boilers, while they have all the advantages of strength, cheapness and simplicity of construction, convenience and safety in use, claimed for either. Send for a circular,

American Railroad Journal.

New York, Saturday, April 11, 1863.

European and North American Railway.

The earnings of this road for the years ending October 31, 1861 and 1862, have been as follows:

	1861.	1862.
From passengers	$69,558 03	$51,382 22
" freight	47,700 72	45,784 53
" mails, etc.	13,319 14	9,473 53
Total	$130,678 15	$107,640 28
Working expenses	94,245 52	87,634 73
Net earnings	$36,432 63	$20,005 55

From a comparison of the business of the past with that of the preceding year, it appears that there has been a decrease in revenue from all sources of $23,037 87; the decrease in expenses has however, been $6,610 79—making the decrease in net earnings only $16,427 08. "There was," as stated by the General Superintendent in his report, "a slight comparative improvement in the receipts for freight for the months of December, January, March, April, May, June and October, amounting to $2,636 32; but this increase was offset by a more than corresponding decline in November, February, July, August and September, of $3,552 51. The difference being the decrease $916 19. The decline of $18,175 81 in the passenger business appears to have been continuous during the year. All other sources of revenue were comparatively more in January, August and September, by $1,277 68, and less in the other months of the year by $5,223 55, the difference, $3,945 87, being the decrease. The cost of maintenance was much increased by extra labor in cutting ice and shovelling snow, to the extent of $4,106 23, which is attributed for the most part to two unusually severe storms which took place during the months of January and February, 1862."

This line of railway is 108 miles in length, and connects the City of St. John, New Brunswick, with Shediac and Point du Chene on the Gulf of St. Lawrence or Straits of Northumberland, and is a section of what was originally intended to be the great European and North American Railway, joining Halifax and St. John with Bangor and Portland, Me., and the other railways of the United States as well as those of Canada.

The cost of the road and equipment up to the close of the last fiscal year has been as follows:

Permanent way	$3,718,962 87
Engineering	215,305 11
Buildings	194,055 57
Rolling stock and machinery	361,429 65
Miscellaneous stock	15,450 61
General expenses	64,213 92
Total	$4,569,417 73

—equal to $42,309 42 per mile.

The capital expenditure during the year is stated at $20,858 14. This expenditure is thus apportioned: Contractors in settlement of accounts, $1,338 85; ballast, taking out cuttings, building rip rap, &c., $3,418 12; sidings and switches, $875 96; drains, water works and tank houses, at Sussex, Anagance, Petitcodiac and Shediac Stations, and Steves' Lake, $6,477 73; road crossings and fencing, $869 82; buildings, fittings and furniture, $2,387 40; engineering, $769 96; land damage, $454 36; tools and implements, $1,165 40; injectors for locomotives, and check chains, safety straps, and fittings for locomotives and cars, $2,041 66; and miscellaneous matters, $1,053 88.

The equipment of the road consists of 14 locomotives; 12 first and 6 second class passenger cars; 4 express, 63 box, 105 platform, 40 ballast and 19 hand cars, and 4 snow ploughs.

The number of miles run by locomotives during the year has been 160,421; No. of passengers carried, 132,094; do., carried one mile, 2,753,001 average number of miles traveled by each, 20.84. Tons of freight transported, 32,788; do., transported one mile, 1,337,873.

Nova Scotia Railways.

We have received the third Annual Report of the Hon Jonathan McCully, Chief Commissioner of the Nova Scotia Railways, embracing operations for the year terminating on the 31st of December, 1862, being a condensed history of their transactions for the previous twelve months.

The Nova Scotia Railway system comprises two lines, one between Halifax and Truro, and the other between Halifax and Windsor—the whole length of the main and branch lines being ninety-two miles. These have been operated together for four years only, though portions have been in use for six and seven years. The earnings and receipts for the past year have been as follows:

	Main line.	Windsor Br.	Totals.
Passengers	$33,631 86	$29,857 98	$63,489 84
Horse & wag'n	6,311 89	7,404 36	13,716 23
Freight	30,913 89	24,579 37	55,493 26
	$78,857 64	$61,841 69	$132,699 33
Receipts from other sources			6,407 38
Total revenue			$139,106 71

Expended as follows, viz:

Maintenance of motive power	$35,171 40
Maintenance of cars	20,784 29
Maintenance of way and buildings	37,366 93
General charges	8,602 61
Balance net revenue	27,181 48
	$139,106 71

Compared with the previous year, the gross income shows an increase of $18,189 05; with an increase in working expenses of $7,810 35—making the increase in net receipts $10,378 70.

The following statement will show the results of operations for the years ending December 31:

	1860.	1861.	1862.
Revenue	$116,742 89	$120,917 66	$139,106 71
Exp'ditures	96,472 26	94,114 88	101,925 23
Net	$20,270 63	$26,802 78	$37,181 48

The number of passengers carried during the year was: Upon the main line, 54,310; Windsor branch, 39,811; holders of season tickets etc., 1,899

—total 96,020, an increase over 1861 of 14,661. This is exclusive of 8,504 teamsters carried free.

The equipment of the road consists of 20 locomotives; 10 first-class and 8 second-class passenger cars, 24 freight: 19 cattle, 101 platform and 13 ballast cars, and 1 snow-plow. The number of miles run by trains upon the main line has been 83,356; upon the Windsor Branch, 64,055—total mileage of cars, 147,411. The mileage of regular and special trains exceeds that of 1861 by 6,358 miles.

The total of freight moved, including horse and wagon traffic is 42,135 tons. The average receipts per ton moved, $1.64. The receipts per ton per mile, 5.81 cents.

By reference to the Capital Account, it appears that there had been received from the Receiver General to December 31, 1861.....$4,267,628 27
Received during 1862..... 5,654 53

$4,273,282 80

The expenditures to December, 31, 1861, were.....$4,267,316 63
Expended during 1862 6,311 28

$4,273,627 91
Loss per credit account 226 10

4,273,401 81

Showing an over expenditure of.... $119 01

We observe from the report, that while the permanent way has been cared for, the rolling stock has not been neglected. The cars have been improved, and the locomotives kept in the best order. A new Engine house has been constructed at Richmond, and a new and commodious station house at that point is contemplated. New telegraphing instruments of the latest construction have also been placed on the line. The masonry and timber work of all the bridges and culverts have been carefully inspected and attended to; 8,350 new sleepers have been re-laid on the Windsor branch and 9,514 on the main line. An improved joint chair has been used on the road, with good results; a new platform erected at Rocky lake station, for the accommodation of passengers and freight for the Waverley gold diggings, with a siding to hold six cars; and a station house, erected to accommodate the increased travel and traffic to the mines, and the transportation of coal for the use of the steam crushing machines.

There has been an increased passenger traffic east and west, and especially by the Bay of Fundy route, in connection with the steamers plying between St. John and Boston. The large increase on the Windsor branch is attributed to the amount of ship building in the vicinity of Windsor and Bedford. Arrangements exist between the proprietors of the steamers plying between Windsor and St. John, the European and N. A. Railway, so that round trip tickets are now disposed of. It is believed large numbers of pleasure travellers in the provinces of Nova Scotia, New Brunswick and Prince Edward's island will, the coming season take this route. The trains have run regularly with but two exceptions during the year and but four casualties have occurred.

Atlantic and St. Lawrence Railroad.

The lease of this road has been amended to embrace the terms and conditions of the vote adopted at the last annual meeting of the stockholders, hds been executed by the President and Directors, and will undoubtedly be by the Directors of the Grand Trunk.

Northern Central Railway.

The revenue of this Company for the fiscal year ending December 31, 1862, was as follows:

	Wrightsville, Y. & G. R. R.	Northern Central.
From freight	$18,432 32	$1,013,036 59
" passengers	10,503 33	476,614 86
" mail	650 00	25,450 00
" express	.....	45,262 18
" U. S. service	.....	316,413 30
" State service	.....	2,109 61
" sundries	.....	12,168 78
Total Northern Central Railway		$1,891,055 82
Wrightsville, York and Gettysburg		29,585 65
Total revenue		$1,920,640 97

The expenses were:

Conducting transport'tion	$241,380 06	
Motive power	311,571 78	
Maintenance of way	254,631 58	
" cars	142,601 05	
General expenses	43,115 41	
		993,299 88
Net revenue, 48.29 per cent.		$927,341 09

—which has been appropriated as follows: to the payment of the annual interest on the funded debt, $308,490; to the payment of instalments due upon sinking funds Nos. 1 and 7, $108,010 69; to the payment of balance of interest due on the annuity to the State of Maryland, $127,867 85; to the purchase of nine first-class engines, $91,350—leaving a balance in the treasury of $287,622 55, which will be applied to the payment of loan No. 6. The report says:

The Board deemed it advisable to pay this loan for the following reasons: First. To enable them to establish a Sinking Fund for loans Nos. 3, 4, and 5, out of the annual interest on loan No. 6, together with the annual instalment of $10,000 per year, after loan No. 1, which falls due in 1866, shall have been paid. Second. To enable them to dispose of the real estate of the Company now occupied by the shops at Bolton, which is encumbered by a mortgage, given to secure loan No. 6, and which property will not be required for the purposes of the road after the completion of the proposed new line to Calvert Station.

At your last annual meeting a resolution was passed, declaring it to be the policy of the Company to construct the Canton Branch.

In accordance with which we have commenced the purchase of the right of way and property along the line of the Canton extension. It is expected that the surveys will be completed and the work put under contract by the first of April next. If the receipts of the road continue during the year 1863 the same as they have been for the past year, we shall have no difficulty in paying out of the current receipts for the work on the Canton extension, and meet the large demands that will necessarily arise for the further improvements of the road and its equipment. We are aware that the receipts have been largely increased by the war. We hope, however, that they will in a measure, be maintained by the completion of the Philadelphia and Erie Railroad. The trade from that road in its present unfinished condition, has been much greater than we had cause to expect, and is limited by our want of cars to carry that which offered. To meet this want, we have contracted for 100 eight-wheel house cars, 100 eight-wheel gondola cars and 20 eight-wheel stock cars, all of which will be delivered during the early part of this year and will be assigned exclusively to that trade.

To move satisfactorily the large number of trains necessary to carry the increased tonnage, and in accordance with section No. 4 of the ordinance of the Baltimore City Council, extending the time for the completion of the Canton division from 1863 to 1866, the General Superintendent has been directed to lay a second track from Baltimore to Relay Station, a distance of seven miles. The business of the road will render it necessary, in a short time to extend this second track to Glenrock Station, a distance of forty-three miles from Baltimore.

In the accompanying report of the General Superintendent, he refers to a want of shops and engine houses. It is contemplated to erect these buildings the present year.

The former managers of this Company, seeing the importance to the city of Baltimore of a connection by rail with the coal mines of Pennsylvania and with the lakes, applied all the means at their command to the completion of the road to Sunbury, and in doing so, necessarily neglected that portion of the road between Baltimore and Harrisburg, which has made almost an entire renewal of it necessary within the last few years. It will take another year and a heavy expenditure to put it in a condition, such as is necessary for the profitable movements of so large an amount of trade and travel as is now coming upon it.

Compared with the previous year, the gross earnings show an increase of $502,668 91; with an increase in expenses of $311,457 68—making the increase in net earnings, $191,206 23.

PROFIT AND LOSS ACCOUNT.

Net revenue—as above		$927,341 09
Interest on bonds, debt and stock of W., Y. & G. R. R. Co.		7,399 77

		364,387 04
Balance		$804,386 63
Balance to December 31, 1861		372,179 51
Total balance December 31, 1862		$1,176,566 14

The number of local passengers carried has been 208,991—mileage of do., 7,471,392; passengers delivered to connecting roads, 75,885—mileage of do., 5,859,155; passengers received from connecting roads, 67,656—mileage of do., 3,445,334. The average distance travelled by local passengers is 35.7 miles; by passengers to and from connecting roads, 64.8 miles. Local travel on account of U. S. Government, 100,392; do., State of Pennsylvania, 1,785; passengers received from and delivered to connecting roads on account of U. S. Government, 66,469; do., State of Pennsylvania, 214. There has been a decrease in local passengers, of 4,594; and an increase in through passengers of 58,493.

The local tonnage of the road (including 200,389 tons of coal) has been 443,261. The through tonnage to and from the Pennsylvania Railroad was 155,520; do., to and from north of Sunbury 56,237—total through tonnage, 207,757—total through and way, 651,018, an increase over 1861, of 113,164,

The Company now own 51 locomotives, which have been run during the year, 942,558 miles, at a

cost of 51.8 cents per mile. The locomotives have averaged 18,481½ miles. The average mileage of passenger engines was 27,783½; and of freight engines, 15,923¾.

The rolling stock consists of 28 passenger cars, 9 baggage, mail and express cars, and 1,547 cars for freight, coal, etc.

The gross revenue of the W., Y. & G. R. R. was $29,585 65; and the expenses of operating and repairing the road $15,825 06—leaving net revenue, $13,760 59. Dividend, $1 per share, and interest on bonds and debt, $10,686 36—leaving a surplus of $3,074 23, thus reducing the deficiency of the previous year to $6,509 85.

Rutland and Burlington Railroad.

At an adjourned hearing in Burlington on the 2d inst., the appointment of D. A. Smalley and E. A. Chapin, temporary trustees came up, with the expectation that it would be made permanent. The opposition of the N. Y. and Boston bondholders, representing $900,000, was successful. Judge Pierpont decided that both parties in interest might be heard with testimony on the 18th of June next, when a decision will be made, either in favor of confirming the present trustees or appointing two new ones.

The most important movement will be the hearing on the 15th at Rutland upon the question of possession by the first bondholders. There can be no doubt that the transfer of the franchise, the operating of the road, etc., from the hands of the trustees of an almost intangible claim to the hands of those who have a prior claim in law, right and equity, will conduce to the prosperity of this valuable and important line of railroad. The road is in good condition, and when well out of this slough of contending interests and placed upon a solid basis of a *single* management, it will fullfil all that it proposed to do at the time of its inception.

Lake Superior Copper Product for 1862.

The following is the recapitulation of the Portage Lake district for the year 1862:

	Tons.	lbs.
Quincy mine	1,252	1,493
Pewabic mine	1,000	1,471
Franklin mine	928	1,131
Isle Royale mine	520	1,030
Huron mine	98	874
Hancock mine	66	816
Mesnard mine	33	000
Total for the year	3,900	815

The following figures will show the decrease in the production of this district for 1862:

	Tons.	lbs.
Product in 1861	4,688	1,155
Product in 1862	3,900	815
Decrease	788	340

The decrease is partially accounted for by the increase of the per centage of the mineral, which in 1861 was 73, but will, for 1862, reach at least 80. A difference of seven per cent would make fifty-six pounds more than 223 tons, making the actual deficit, 565 tons, 284 lbs.

Shipments of copper from Ontonagon district, in 1862, as published in the *Miner*, were as under:

	Tons.	lbs.
Minnesota mine	1,525	96
National mine	596	100
Rockland mine	331	1,439
Evergreen Bluff mine	82	210
Superior mine	53	575
Ridge mine	28	1,227
Ogima mine	27	1,785
Knowlton mine	19	982
Bohemian mine	16	1,912
Adventure mine	16	1,250
Carp Lake mine	7	104
Mass mine	1	591
"To which should be added for amounts which have been overlooked in making up and publishing."	22	500
Making a total of	2,728	778

The shipments from Keweenaw district, in 1862, were:

	Tons.	lbs.
Cliff mine	1,634	1,970
Central mine	304	1,190
Copper Falls mine	190	1,888
Amygdaloid mine	94	1,795
Petherick mine	63	343
Phœnix mine	57	1,180
North American mine (tribute)	27	477
Eagle River mine (tribute)	5	397
North Cliff mine	1	1,673
Garden City mine	1	724
Total shipment	2,390	1,637

The product of the Lake Superior copper region, for the year 1862, will therefore stand as follows:

	Tons.	lbs.
Portage Lake district	3,900	815
Ontonagon district	2,728	778
Keweenaw district	2,390	1,637
Grand total 1862	9,019	1,230
Product in 1861	10,377	400
Decrease	1,317	1,170

The amount realized from the sales of copper, in 1862, will be largely in excess of the amount realized in 1861, the price of copper being higher the past year. So that the mines have actually paid better than in any previous year.—*Houghton Mining Gazette.*

Exports of Great Britain.

The accounts issued from the statistical department of the Board of Trade show that the total declared value of the British manufactures and produce exported last year amounted to £124,137,812, against £125,102,814 in 1861, and £135,891,227 in 1860. The value of the exports rose during the year from under eight and a half millions in January to nearly thirteen millions in August, declined during the three following months, and rose again in December, when it amounted to £10,807,033, against £9,747,810 in the corresponding month of the preceding year, and £12,176,951 in that of 1860. The decrease of nearly a million on the exports of the year, as compared with 1861, occurred in the trade with Russia, Prussia, Hanover, Holland, Belgium, Portugal, Spain, Italy, China, South America, and, among British possessions, India and Hong Kong. The exports to France rose from £8,895,588 to £9,210,523; to the United States from £9,064,504 to £14,398,801; to Australia and New Zealand from £10,692,771 to £11,930,062; and to the British West Indies from £1,816,050 to £2,377,648. The bulk of the decrease was in cottons, and the only other principal articles which show any considerable diminution are hardwares and cutlery, railway and cast iron, silk and worsted manufactures, wool, and seed oil. Most of the other principal articles show a very considerable increase. The value of the fire-arms exported rose, for instance, from £515,361 to £1,579,333, with a notable increase also in the exports of other arms and ammunition. Earthenware and porcelain rose from £1,070,530 to £1,217,532, an increase confined, however, to the exports to France, the Hanse Towns, Australia and the United States. Glass rose from £589,876 to £645,731, the increase extending to every description except common bottles. Hardwares and cutlery were, as already mentioned, among the articles which show a diminution of exports, the value having fallen from £3,425,610 to £3,346,059, a decrease confined, however, to Spain. South Africa, the United States, Brazil, and Buenos Ayres. Saddlery and harness show an increase from £307,756 to £343,480, extending to every country except South Africa; and other leather goods (principally boots and shoes) from £1,526,847 to £1,816,603. The bulk of the latter trade is with Australia, but the increase was general. The steam engines exported rose in value from £1,258,164 to £1,631,761, notwithstanding a decrease in the exports to France and Russia; but the exports of other descriptions of machinery diminished in value from £2,955,506 to £2,464,929, the decrease extending to every country except those for which the Hanse Towns serve as the ports. Plate and plated wares, watches and jewellery, show an increase from £449,848 to £504,895. The metal exports are shown in the following table:

	1861.	1862.
Pig and puddled iron	£1,044,304	£1,204,584
Bar, bolt, rod and angle iron	1,882,275	2,252,638
Railway iron	2,906,359	2,815,007
Iron wire	205,979	303,780
Cast iron	702,824	568,209
Iron hoops, sheets and boiler plates	848,336	1,024,176
Wrought iron	2,009,613	2,311,251
Steel, unwrought	726,956	822,407
Copper "	433,410	496,322
" wrought	1,714,445	2,117,092
Brass	171,050	209,461
Lead	423,421	770,590
Tin, unwrought	348,856	472,656
Tin plates	907,947	1,211,881
Zinc	95,786	102,700

The increased exportation of pig and puddled iron was limited to France and Holland; but that in bars, rods, &c., was almost general, the exception being in the exports to Italy and India. The decrease in railway iron was limited to the demands of Russia, India, Australia, the United States, Cuba, Brazil and Chili. That in cast iron, on the other hand, extended to every market except France, Russia, Australia and the United States. France

and Russia took also a smaller quantity of iron hoops, sheets and boiler plates; but the exports to all other countries show a considerable increase. The increase was nearly as general in respect to wrought iron, the only exceptions being Russia, India and South Africa. The increase in steel was due to the larger demand of the United States, our principal customer. That in wrought copper extended to every market except Holland and India; the former country being also the only exception to the increased demand for copper plates, sheets, rods, &c. France and Russia took smaller quantities of lead than in 1861, but the exports to all other countries, and especially to China and the United States, show a very considerable increase. The increase in unwrought tin extended to all our customers except Russia and Turkey, and that in plates to all but Australia. The exports of the other principal articles are shown in the next table, from which it will be seen how much the linen and woollen trades have benefited by the depressed condition of the cotton manufacture:

	1861.	1862.
Apparel and slops	£2,168,186	£2,556,463
Beer and ale	1,411,205	1,594,380
Coal, cinders and culm	3,604,790	3,750,009
Cotton, piece goods	36,124,685	28,560,033
Cotton yarn	9,292,761	6,203,331
Haberdashery & millinery	2,434,194	3,591,338
Linen, piece goods	3,571,131	4,648,270
Linen yarn	1,622,216	1,851,596
Seed oil	1,066,856	995,947
Silk, thrown, twist & yarn	918,342	1,093,329
Silk, manufactures	1,395,572	1,267,130
Wool	1,143,358	762,257
Woolen and worsted yarn	3,552,976	3,854,111
" " manufactures	10,831,993	12,669,415

Personal Injuries by Railroad Accidents; Damages Recoverable by next of Kin.

ACTION BY A FATHER AS ADMINISTRATOR OF HIS WIFE WHO WAS KILLED BY THE DEFENDANT'S NEGLIGENCE; THE LOSSES WHICH MAY BE ESTIMATED IN FIXING THE AMOUNT OF DAMAGES RECOVERABLE; THE NEW YORK STATUTE OF 1860.

This action was brought under the statute of the State of New York, passed by the Legislature in 1860, giving damages to the next of kin of persons dying from injuries received by the negligence of others. The action was by one Tilley, as administrator of his wife, who was killed by the alleged negligence of the servants of the defendant, the Hudson River Railroad Company. The intestate was a passenger upon the defendant's railroad in January 1860, when a collision took place between a freight train and the passenger train in which she was traveling, by which she was so badly injured that she died a few days afterwards. No question was made, but that the collision arose from negligence on the part of the defendant's servants. Up to the time of the injury, the plaintiff and his wife lived together at Grafton, in Rensselaer county. They had a family of five children, four of whom were minors, the youngest being nine years old. The plaintiff was a carpenter and was much of the time at work away from home. The wife, besides attending to her household and taking care of her children in the usual manner, carried on the business of making shirts, upon the employment of wholesale dealers in New York, who furnished her the materials. It was not claimed that she carried on any business on her own account; but it was alleged in the complaint, and shown on the trial, that the business was that of her husband. The evidence of her being engaged in that business was received against the objection of the defendant's counsel, who excepted to the ruling. Evidence was given touching the practice of the deceased of teaching her children, and instructing them in household duties, and those who were girls, in sewing. The defendant's counsel moved for a non-suit, on the ground that no damages such as the statute contemplates had been shown; and that being refused, he asked for an instruction that nominal damages only could be given, which was also denied. The judge instructed the jury that the plaintiff was not entitled in this action to recover any damages which resulted to him as husband on account of the death of his wife, but that it was as the representative of his children only that he was entitled to recover, and that it was their pecuniary loss for which damages were to be given. In estimating these damages he charged them that they were first "to inquire what the woman was worth over and above her own support to her family; what was this woman fairly worth; what could she earn over and above the expenses of her own support and living." This was afterwards qualified by the judge, observing that the child could not be considered as having lost the earnings of the deceased, for those he said belonged to her husband; but if he should retain them until his death, they would pass in the absence of a will to his children, or to his wife and children if he left a wife. He then proceeded as follows: "Yet, although the father does survive, you may take into consideration the increase that the earnings of this woman would ordinarily have added to the common stock, in view of the reasonable probability that, upon his death, even though he survived his wife, the children would inherit all his real and personal property; and may estimate the fair pecuniary value of the chance that, in the ordinary course of things, the earnings of the wife would have gone through the husband to the children." The judge also charged "That the plaintiff was not entitled to recover anything as for any value of the deceased to her children in their nurture or education."

The verdict of the jury was in favor of the plaintiff for $4,000 damages. The defendant then carried the case to the N. Y. Court of Appeals; which now reverses the judgment of the Supreme Court, and holds that the probability that the children would have received an estate, increased by their mothers earnings on the death of their father cannot be considered in estimating damages. But the injury to the children in the loss of maternal nurture and education, is a pecuniary one within the intent of the statute, and a proper ground of recovery. The following opinion was delivered at the decision of the case:

DENIO, J.—One ground of estimating the damages, which the jury were instructed to take into consideration, was the expectancy of the children of the deceased in the fruits of her earnings in the business of making shirts, in which she was engaged. It was conceded that these earnings, immediately upon being realized, became the property of her husband; and that the only way in which the children could be benefitted by them would be by succeeding to them as the next of kin of their father, in the event of his continuing to own them, of their surviving him, and of his dying intestate. It seems to me that this is too remote, and that it is not within the meaning of the statute. If the children should have become the possessors of these anticipated earnings, it would not be as the next of kin of their mother, but on account of their sustaining that relation towards their father. The gravamen of the claim in that aspect is, that, by the wrongful act of the defendants, they have been cut off from the succession to wealth, which, but for the untimely death of their mother, occasioned by that act, she would or might have earned. But this injury does not happen to them as her next of kin. In that character it would be unimportant to them whether their mother continued to realize earnings or not; for all such earnings would immediately vest in the husband, and could never come to them as her next of kin. The construction of this statute, it must be admitted, involves great difficulties; and the grounds and measure of damages cannot always be determined by the application of the ordinary rules of the common law. If the deceased in this case had been a widow, and had been engaged in a profitable business, rendering it probable that, if her existence should be prolonged to the average period of life, she would acquire wealth. I am not prepared to deny but that her death, by the wrongful act of another, would entitle her children to damages under the provisions of this act, on account of being thus deprived of the probabie succession; for though the cause and the effect would be too remote from each other to found a claim to damages by the rule of the common law, such a ground of damages may have been within the contemplation of the legislature in passing the statute. Next of kin are embraced in its language, as parties who may be pecuniarily injured by the death of a person to whom they stand in that relation; and it is not required that the degree of kindred should be such as to create the duty of sustenance, support or education. It is well settled that the survivorship of a wife is not essential to the maintenance of the action. Suppose the only kindred to be collaterals, between whom and the deceased there was not legally or conventionally any connection which would impose such duties upon him; yet, by the terms of the act, damages in such a case must still be measured by the pecuniary injury resulting to such next of kin. As regards the existing property of the deceased, they would not be pecuniarily injured by his death; but if he left no will, they would be immediately benefited by the amount of property he then possessed. The only loss such parties could sustain would be of the further accumulations, which it may be supposed he would have added if he had continued to live and which might at his remote decease, have devolved upon them. This is sufficiently vague and uncertain as a ground of damages, and could not be allowed, except on account of the peculiar provisions of the statute, and the impossibility of giving it effect in certain cases, except under such a construction. But the rule laid down at the trial allowed damages to be given upon quite a different ground, involving another series of contingencies. At the death of the victim of the defendant's negligence, the next of kin of deceased are definitely determined, and are capable of immediate ascertainment; but it would then be quite impossible to determine who will be the next of kin of the husband, and entitled to succeed to his estate, when at some more distant and uncertain period he comes to die. Those who now are pre-

sumptively such, may or may not then be alive; or if alive, their number may be increased by the birth of others, or another share in his estate may arise in the person of a second wife. The rule of damages laid down would, in my judgment, be far too speculative and uncertain for actual application.

It will not be essential to pass upon the other exceptions, except so far as may be useful for the purposes of another trial. We think it was not improper to allow the plaintiff to show the habitual occupation and employment of the deceased, for the purposes for which it was offered and received on the trial, namely, to show her general capacity and relation to her family. It is true the testimony on that point was made to assume proportions beyond what seems to have been necessary for the purposes mentioned; but, it being competent, it was for the judge to determine the extent to which the examination might be carried.

The injury to the children of the deceased by the death of their mother was a legitimate ground of damages; and we do not agree with the defendant's counsel that they ought to have been nominal. The difficulty upon this point arises from the employment of the word *pecuniary* in the statue; but it was not used in a sense so limited as to confine it to the immediate loss of money or property; for if that were so there is scarcely a case where any amount of damages could be recovered. It looks to prospective damages of a pecuniary nature, which have been cut off by the premature death of the person from whom they would have proceeded; and the word *pecuniary* was used in distinction to these injuries to the affections and sentiments which arise from the death of relatives, and which, though most painful and grievous to be borne, cannot be measured or recompensed by money. It excludes, also, those losses which result from the deprivation of the society and companionship of relatives, which are equally incapable of being defined by any recognized measure of value. But infant children sustain a loss from the death of their parents, and especially of their mother, of a different kind. She owes them the duty of nurture and of intellectual, moral and physical training, and of such instruction as can only proceed from a mother. This is, to say the least, as essential to their future well being in a worldly point of view, and to their success in life, as the instruction in letters and other branches of elementary education which they receive at the hands of other teachers who are employed for a pecuniary compensation. Suppose a person under obligation to furnish a minor apprentice with common school instruction for a given period; would not the violation of that duty furnish a claim for damages? The injury would be of the same character which a child suffers from the loss of the training and instruction which it is entitled to receive from its parents. The injury in these cases is not pecuniary in a very strict sense of the word, but it belongs to that class of wrongs as distinguished from injuries to the feelings and sentiments; and in my view, therefore, it falls within the term as used in the statute. It is argued by the defendant's counsel that there should be no recovery on these grounds, because the father is obliged to provide what the children have been deprived of by the loss of their mother. But this is not an adequate answer. The children have been deprived of that which they were entitled to receive, by the wrongful act of the defendant. Their loss may or may not be made up to them from another source; but in the meantime they are entitled to a fair and just compensation from the wrong-doers by the provisions of this statute. The damages given by the statute are the pecuniary injuries sustained by the widow, and the next of kin of the deceased resulting from such death; and which next of kin in the present case, are the children of the deceased. The recovery must therefore be confined to the pecuniary injuries which they and they only have sustained.

Judgment reversed and a new trial ordered.

Progress of Iowa.

The following communication in reference to the progress of Iowa is from the pen of a Des Moines, Iowa, correspondent of the Chicago *Tribune:*

The public mind is not given, at this time, to the consideration of any other than the all-engrossing topic of war. Yet it may be well to permit the mind occasionally to dwell upon the achievements of peace, and what it was doing for the great West. By calling to mind the progress of our own State, before grim war's alarms stayed the tide of immigration and improvement, we shall be better able to judge of the criminality of that rebellion that is striking at the life of the nation.

Having a leisure hour I have employed it in looking over the compendium of the late census, and in compiling the following facts from its deeply interesting pages. They deserve a wide publicity because of the many popular errors they correct, with regard to the productions of the prairie States. Iowa is fittingly following in the footsteps of Illinois in all that constitutes the greatness of an agricultural State.

STATISTICS COMPILED FROM LAST CENSUS.

	1850.	1860.
Population	$192,214	$637,913
Real Es. and per. prop.	$23,714,638	$247,338,265
Lands improved, acres.	824,682	3,780,253
Cash value of farms	16,657,567	118,741,405
Value of farming imp.	1,172,869	5,190,042
Value of live stock	3,698,275	21,776,786
Wheat, bushel	1,530,581	8,433,205
Rye, bushels	19,916	176,055
Indian Corn, bushels	8,656,790	41,116,994
Oats, bushels	1,524,345	1,079,653
Tobacco, lbs.	6,040	312,919
Wool, lbs	373,898	653,063
Peas and beans, bush.	4,775	45,570
Irish potatoes, bush.	276,120	2,700,525
Sweet potatoes, bush.	6,243	50,938
Barley, bush	25,093	454,116
Buckwheat, bush.	52,516	216,524
Orchard products.	$8,434	$131,234
Wine, gallons	420	3,706
Butter, lbs	2,171,188	11,416,002
Cheese, lbs	209,840	901,220
Hay, tons	89,055	707,260
Sorghum mol'sses, galls.		1,993,474

These statistics speak well for the growth of Iowa. They show a healthy, a marvellous progress. But for this war, the statistics of 1870, would show a rate of progress equally gratifying. For Iowa had just begun to recover from the effects of a serious financial revolution when the war began. Railroad enterprises were paralyzed, and the tide of emigration was checked just as the signs of the times gave promise of unusual prosperity. Let the people of Iowa remember this fact. In the dark catalogue of evils following in the train of a causeless rebellion, may be mentioned the blasting of cherished hopes in all the Western States.

It will surprise many to learn, as they will, from the census report, that there are but six States in the Union which produce more corn than Iowa. Ohio shows an increase of only ten millions of bushels in 1860, as compared with 1850, while Iowa makes an increase of nearly thirty-three millions of bushels.

As a wheat producing State, there is not that difference in favor of Ohio, as against Iowa, that many have been led to suppose.

Pittsburg, Ft. Wayne and Chicago Railway.

The following is a statement of the Pittsburgh, Fort Wayne and Chicago Railway Company, in General Account, January 31, 1863:

Cost of railway, equipment and structures		$17,799,353 22
Cost of supplies on hand for current operations		470,429 72
Amount due from other companies.		110,246 39
Miscellaneous assets		317,926 47
Cash in hand		504,201 05
Interest on bonds for one month		64,277 50
Construction expenditures for one month:		
On Eastern Division	$39,332 12	
On Western Division	60,424 54	
		99,756 66
Operating expenditures for one month, viz:		
Conducting transportation	$48,321 07	
Motive power	63,196 21	
Maintenance of way	42,999 36	
Maintenance of cars	15,139 02	
General expenses	15,449 04	
		185,104 70
Balance to debit of income account		195,459 59
		$19,746,755 30
Capital stock		$5,772,591 41
1st mortgage coupon bonds		5,250,000 00
2d mortgage coupon bonds		5,160,000 00
3d mortgage registered bonds		2,000,000 00
O. & P. R. R. bridge coupon bonds.		189,500 00
P., Ft. W. & C. R. R. Co. depot coupon bonds		337,173 00
Amount due other companies		56,539 25
Miscellaneous liabilities		30,685 70
Amount due for expenditures in January and prior		287,934 33
Amount due J. F. D. Lanier *et al.*, Trustees		313,192 75
Earnings for one month, viz:		
From freights	$232,320 42	
From passengers	86,284 03	
From express matter	2,936 25	
From mails	7,825 00	
From rent of railway	7,083 33	
From rent of buildings.	200 00	
From miscel. sources	691 35	
		337,350 38
Excess of expenditures over earnings in January ult		11,788 48
Total		$19,746,755 30

The Falmouth and Aquia Creek Railroad.

The business done upon this single track railroad foots up a large aggregate. Ten trains are now run daily between the two points, numbering about one hundred cars, transporting forage and provisions for the army, and about twelve hundred passengers. This is exclusive of extra trains, which are frequently run. Considering the amount of business done, the road has been remarkably free from accidents, none of a serious character having occurred since it has been in operation. The working of the road is under the charge of W. W. Wright, General Superintendent and Engineer, at Aquia Creek, assisted by Messrs. Jones and Chipman, Despatchers at Aquia, and A. J. Cheney, at Falmouth, George W. Miner, at Stoneman's Switch, A. H. Holden, at Potomac Run, and Wm. H. Glascott, at Brooks Station. The telegraph line between Falmouth and Aquia is of

great assistance in facilitating the operations of the railroad, besides transacting a large amount of business for the army. The operators at Falmouth, are Messrs. George Garland and A. C. Snyder.

Detroit and Milwaukee Railway.

The following is the revenue account of the Detroit and Milwaukee Railroad for the twelve months ending Dec. 31st, 1862:

EXPENSES.

	Amount.	Per cent. on gross receipts.
Maintenance of way	$79,527 66	9 17
Locomotive expenditure	93,852 92	10 71
Repairs and renewals of pass'ger and freight cars.	27,485 48	3 17
Passenger traffic expenses, including proportion of steam ferry across Lake Michigan and on the Detroit River	84,586 06	9 76
Freight traffic expenses, including do	143,518 74	16 55
General charges	25,877 35	2 97
Taxes and insurance	27,331 32	3 15
Total revenue expenditure	$481,179 53	55 48

RECEIPTS.

Passengers	$291,040 71
Freight and live stock	546,863 38
Mails and sundries	27,948 76
Amount received for rents	873 35
Total revenue receipts	$866,726 20
Total revenue expenditure	481,179 53
Excess of revenue receipts	$385,546 67

Cleveland and Toledo Railroad.

In connection with the recent declaration of a dividend by this company, the President has addressed the following Circular to the shareholders. It is dated Cleveland, Ohio, March 26, 1863:

The earnings of the Company for the current year ending April 30 will amount to $1,350,000, being an increase over the last year of $350,000, and the net earnings, after paying running expenses, interest on the bonded debt, and all contingencies, will amount to a little over 10 per cent. on the capital stock.

The floating debt of the Company has been entirely paid off, and the Company has $600,000 of cash on hand to pay the bonds maturing during the year 1863, and which are being now paid at the Corn Exchange Bank in New York when presented.

The Company has also an additional sum of $270,000 of money on hand, exclusive of dues from other companies on account of transportation arising from its current earnings, from which the foregoing dividend is to be paid. After payment of the dividend there will remain a balance of current earnings in hands of the Company of about $133,000, with six weeks' earnings yet to come in before the close of the current year, estimated at $75,000 net, making a surplus on the 30th of April of about $208,000 a portion of which it will be necessary to use the coming Summer in procuring additional locomotives and cars, and in putting in additional side-tracks, and in improving the general condition of the Company's property, so as to provide for the large increasing business coming upon the road during the Winter months.

The subject of consolidating the road of this Company with the line of road from Cleveland to Buffalo, which has been agitated in some newspaper articles, has not been brought to the notice of the Officers of this Company by any one connected with either of the roads east of Cleveland, and is a subject that would receive the attention which its importance demands whenever presented in any official shape.

The road of this Company possesses important advantages, both in location and charter, which cannot be overlooked. Situated as it is between two important and growing cities in Ohio, with radiating roads from each in nearly every direction, converging their traffic to those cities, which must pass over the road of this Company, it must be evident to even a casual observer that the earnings of this Company have not yet reached their maximum, but must continue to increase from year to year for some time to come. While this Company also possesses important privileges in its special charter, being unrestricted in the price it can charge on the transportation of passengers and property, "but may demand and receive from all persons and property such rates of toll as the corporation may think reasonable;" while most other roads in Ohio are limited by the general law of 1848 in the amount they can charge on the transportation of passengers and freight.

The present managers of the Company find, after three years, that they have paid off the large floating debt which was existing at that time, without increasing the bonded indebtedness for that purpose, that the construction account has been reduced $74,000, and that the Company is now in a condition to pay hereafter regular semi-annual dividends from its net earnings, and to meet its maturing bonds in cash, and with ample means on hand to improve the condition of the property and provide additional equipments to meet the future increasing business of the road.

The Sarnia Line of Transportation.

A tri-weekly line is announced in the Boston papers to connect, by steamers and rails, the Western and the Eastern States. Four steamers will ply between Chicago and Sarnia, at which point freight will be transferred to the Grand Trunk Railway and carried without breaking bulk to Portland.

Oil Creek Railway.

The Erie *Gazette* says the Oil Creek Railroad, twenty-seven miles long, is already doing a flourishing business. The gross earnings for February were $24,730 83, and the working expenses are under 25 per cent. The earnings for the week ending March 7th, were $5,470 67. The road will be extended ten miles further in a short time.

To Contractors.

Sealed proposals will be received by S. F. Miller, at McGregor, Iowa, for the grading and bridging, ready for the track, of the 1st division of twenty miles of the McGregor Western Railway.

Dover and Winnipisseogee Railroad.

This Company was organized on the 12th ult., by the choice of the following directors: William Hale, William Hill, John McDuffie, Samuel A. Walker, Edward C. Bates, Andrew Peirce, Jr., George M. Herring. The design of this corporation is to purchase the Cocheco Railroad; and by its charter it has the right to discontinue any part of this road, which it will do, we suppose, if it finds it necessary for the successful prosecution of its business.—*Dover Enquirer.*

Canal Boats.

The Albany *Argus* states that there are now building at various points in this State 214 boats, which will be ready for launching on the opening of navigation. These boats will average in capacity two hundred tons, thus adding forty-two thousand tons to the carrying capacity of the fleet.

There were 3,185 boats, good, bad and indifferent, afloat at the close of navigation last fall, and with the new will make a total of 3,339. Something over 2,000 of these boats are suitable for carrying grain—just how many is a matter of question.

Chicago Provision Trade.

The Beef and Pork packing season for 1862 and 1863, in Chicago, is now closed, and the results far exceed the most sanguine expectations of the trade.

The following table shows the amount of hogs packed in Chicago for eleven seasons:

Season.	No. Packed.
1852-'53	48,156
1853-'54	52,849
1854-'55	73,694
1855-'56	80,380
1856-'57	74,000
1857-'58	99,262
1858-'59	185,000
1859-'60	167,918
1860-'61	231,335
1861-'62	514,118
1862-'63	970,262

The following table shows the receipts and shipments of hogs during the packing season for eleven years:

Season.	Received.	Shipped.
1852-'53	65,158	10,000
1853-'54	83,980	10,628
1854-'55	138,565	52,881
1855-'56	308,588	187,753
1856-'57	220,702	103,074
1857-'58	213,216	88,546
1858-'59	251,102	46,434
1859-'60	255,384	71,266
1860-'61	354,684	119,886
1861-'62	746,697	228,682
1862-'63	1,236,645	846,881

In the above table no calculation is made for the large number brought in by teams from the country, and on the Michigan Central and Michigan Southern Railways. During the past season, long lines of farmer's wagons could have been seen coming into town, filled with dressed hogs, which they sold to the packers. This will account for the apparent discrepancy in our figures.

The following table shows the number of beeves packed in Chicago for twelve years:

Season.	No. Packed.
1851-'52	21,866
1852-'53	24,663
1853-'54	25,431
1854-'55	22,691
1855-'56	28,972
1856-'57	14,987
1857-'58	34,675
1858-'59	45,505
1859-'60	51,809
1860-'61	25,209
1861-'62	55,212
1862-'63	42,163

To give our readers some idea of the magnitude of the trade in beef cattle and hogs in this city, we append the following table, showing the receipts and shipments for a series of years:

	Hogs.		Beeves.	
Year.	Received.	Shipped.	Received.	Shipped.
1855	302,068	145,580	10,715	8,253
1856	293,625	281,540	21,950	22,502
1857	251,115	131,216	48,524	25,502
1858	530,009	176,368	113,151	43,149
1859	284,496	212,840	90,574	85,973
1860	355,851	156,284	155,753	104,122
1861	675,002	280,094	204,579	124,146
1862	1248,80	491,135	209,655	112,745

The following table will show the number of hogs packed at several points:

	1861-'2.	1862 '3.	Increase.
Chicago	514,118	970,262	456,144
Cincinnati	474,467	598,457	123,990
Milwaukee	99,471	182,365	83,704
Peoria, Ill.	35,325	80,000	44,675
Terre Haute, Ind.	60,268	80,593	20,325
Keokuk, Iowa	45,000	112,000	62,000
Burlington, Iowa	50,650	61,000	10,400
Lafayette, Ind	38,000	56,602	18,602
Beardstown, Ill.	9,365	14,660	5,295
St. Joseph, Mo.	4,000	8,000	4,000

Commerce of New York.

The Custom House tables of the trade of New York for February present the following results:

	1861.	1862.	1863.
IMPORTS.			
Entered for consumption	$7,003,399	$7,058,174	$7,372,539
Entered for warehouse	3,752,678	3,370,486	3,657,775
Free goods	3,312,563	3,381,473	783,561
Specie	2,274,067	62,000	213,971
Total entered at the port	$16,341,697	$13,872,140	$12,027,846
Withdrawn from warehouse	5,781,728	3,466,641	2,499,127
Cash duties	2,528,736	3,565,063	3,590,713
EXPORTS.			
Domestic produce	$10,236,820	$10,078,101	$17,780,586
Foreign produce, dutiable	429,527	208,757	610,009
Foreign produce, free	137,950	49,066	43,889
Specie	1,102,926	3,776,919	3,965,664
Total exported from the port	$11,907,233	$14,112,843	$22,400,148
Total, exclusive of specie	10,804,307	10,335,924	18,434,484
Exchange on London, 60 days	108a109	113a115½	170½a190½

The following is a statement of the imports and exports for the first eight months of the fiscal year:

	Imports incl. specie.	Domestic Exports. Merch'dise.	Specie.	Total.	Exports of foreign merchandise, dutiable and free.
July, 1862	$20,353,202	$14,050,437	$8,067,337	$22,117,774	
Aug. "	14,304,843	13,046,389	3,713,572	16,759,921	
Sept. "	18,147,917	14,734,993	3,085,919	17,840,912	
Oct. "	13,413,906	19,476,947	6,707,519	26,184,466	
Nov. "	10,309,398	14,060,340	6,213,251	20,273,591	
Dec. "	13,073,618	14,805,112	3,673,112	18,478,224	
Jan'ry, 1863	15,739,576	14,329,398	4,264,574	18,953,972	
Feb'ry, "	12,027,846	17,780,586	3,965,664	21,746,250	
1862-'63	$117,369,306	123,284,202	40,050,908	163,335,110	6,281,976

American Railroad Journal.

Saturday, April 11, 1863.

Stock Exchange and Money Market.

The late excitement in the market has subsided into comparative quiet. There appears to be a growing conviction that the rebellion is dying out, and this idea induces increased caution among operators. We notice the auction sales of dry goods are not successful, that the prices in the retail shops have been reduced very considerably, that even cotton goods are lower, and bargains as they are called, are very frequently advertised, to attract the attention of buyers, who have been holding back for some weeks past. The Hudson river is again open, the canals of this and the neighboring states will be, in a few days more; the lakes are free from ice, and their fleets of steamers and sailing vessels are again in motion. Every where the hum of domestic commerce is beginning to be heard, as winter finally takes its departure. We look forward to a season of great activity.

Our foreign commerce is however affected unfavorably by the unchecked operations of the Alabama and Florida. These two vessels, to the great discredit of our navy department continue to make American bottoms an unsafe depository for our freights, and the consequence is that an unusual number of foreign vessels are now entering our port, and employed in business that has hitherto been almost exclusively our own. Our daily marine reports exhibit lists of ships under every European flag, coming here many of them the first time, to discharge and receive cargoes which should

naturally be in charge of American ship-masters.

The share market which is of the most capricious character and oftener takes its hue from the plans and combinations of cliques and corners, than the real value and condition of the properties represented, has also quieted down. The latest excitement has been witnessed in the Harlem Railroad shares, which within a year have risen nearly five hundred per cent, and are now falling off a little from previous quotations. The real condition and prospects of the Harlem Company may be briefly stated. Under the able management of Mr. Campbell, supported by the heavy capital of Messrs Vanderbilt and Drew, it has been saved from ruin, and the road been worked with great success; not enough however to secure regular dividends on the old or preferred stock. The future is however hopefully looked to, for the following reasons, viz. the construction of the city track to the Central Park, to be commenced as soon as the avenue grade will permit, will beyond all question produce an additional revenue to the Company of $500 per day. This will net a sum sufficient if strictly applied, to pay at least 2 per cent interest on the capital stock. Again it has the right of road way over the new bridge at Albany which is to be immediately commenced, as well as the other railways terminating there, and by extending its track from Chatham Four corners, can operate its own line free from all obligations to the Western, to which it now pays a large sum for the use of that part of its track. It has also extensive wharves and land property at Morrisania, with a branch road to them, where heavy freight is delivered and received cheaply and without difficulty. Here the Great Eastern is expected to lie, as the water is sufficiently deep, and all other vessels that may in the future look for their freights by this railway exclusively. This property at Morrisania is already become valuable. Besides this, is a reserved plan of extending the Harlem Road north so as to unite with the Champlain Roads, at a point already designated, by which a considerable traffic from Canada and Vermont is expected to be realized. This is however some way off in the programme, for there is a more immediate route at hand. Acts both of the Legislature of this State and Connecticut have been passed, permitting the construction of a short line of six miles between the Harlem Railroad at Dover and the Housatonic at Kent. By this connection the former will be virtually extended, one hundred miles over the existing road north to North Adams, and secure the traffic and business of the Berkshire Valley. This may be considered as equivalent to doubling the value of the Harlem Road.

And finally, if there should be an amalgamation of the Central with any other, it is thought it will be with the Harlem, as it is every way the best purchase for the Central and far more accommodating. The present rise in Harlem has therefore considerable "provocation." It may be owing to an honest belief in its increasing value; or it may be for account of the Central, so as to secure a Board which will consent to amalgamate, or it may be for the profit on the valuation at which the shares will be taken by the Central when the amalgation is perfected.

Yet pleasant as is this view of the subject, there is another; it is in the power of Messrs Vanderbilt and Drew to upset the whole of these calculations, and to put down the price of shares whenever they please. The sale of 20,000 shares by one house a few days since, shows that a steam hammer was at work, at least on that occasion.

The property and assets of the Company are returned at $8,036,543; the existing liabilities $6,080,769; the gross receipts the last six months from Oct. 1, to April 1, 1863, amount to $150,000 more than during the corresponding period the last year.

Among the steadiest of the Railway shares, are the Central, Hudson and Erie, this last wonderfully strengthened by the connection with the Atlantic and Great Western, the marvel of the day, for the rapidity, quiet and success attending its construction. The Erie, at first the child of disaster, is now enjoying the most vigorous manhood, and it is gathering strength with every day's existence, and will become the giant of the Railway system. The Western roads as a whole, are prosperous and in good credit in the market.

Government securities are in demand, and bear a good price. Gold is dull and heavy; at the last quotations on Wednesday standing at 145½ Exchange then ruled at 161 @ 162. The Sub-Treasury receipts continue large, specie coming in, in sufficient quantities to meet the wants of the Government for interest. Some clamor is raised at the action of the Legislature of this state in refusing payment of gold to other than foreign creditors, as a stigma on the fair fame of New York. The suspension of specie payments is equally a stigma, and we think that the Banks who are clamoring because the state has not paid them their interest in gold, should look into their mirrors and see with what face they ask from others, what they will not do themselves. S. Hallett's *Circular* of this week contains a copy of the Confederate Cotton bond. Judging from the large number of bales, recently captured from the rebels, marked C. S. A. we think the security of the loan will finally amount to just nothing at all.

The Supreme Court of the Northern District of New York, all four Judges concurring, has affirmed the constitutionality of the act of Congress making the National currency a legal tender for all debts, both those contracted before and after the passage of the law.

The Rome, Watertown and Ogdensburg Railroad Company are prepared to pay the Potsdam and Watertown Railroad bonds due in 1864, or give in exchange their sinking fund bonds, maturing in 1890, if presented on or before the 1st of June next.

The Treasurer of the Delaware and Raritan Canal, and Camden and Amboy Railroad Companies is now prepared to pay the bonds due at Princeton, August 1st, 1863, being the 5 per cent. converted sterling loan. The principal and also the last coupon will be paid on presentation to the treasurer or at the office of the joint companies in Philadelphia.

The Toledo and Wabash Railroad Company will extend until August, 1890, the payment of their First Mortgage bonds, if presented at the office for indorsement before the 1st of May.

The Lehigh Valley Railroad Company announces a quarterly dividend of two and a half per cent., clear of all taxes, payable at the office of the company, Philadelphia, on the 15th, 16th and 17th inst., and every Saturday thereafter.

The Chicago, Burlington and Quincy Railroad Company have declared a semi-annual dividend of 4 per cent. (free of government tax), payable on the 15th May.

The suits against the Cleveland and Toledo Railroad Company to compel them to run their trains over the entire length of the Northern Division Railroad, have been decided by the Supreme Court of Ohio in favor of the Railroad Company.

The Long Island Railroad Company has declared a dividend of $2 50 per share free of Government tax, and also a stock dividend of three shares on each 100 shares.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

Branch Track of the Grand Trunk Railway.

A meeting of the citizens of Three Rivers, C. E., has been called for the purpose of taking into consideration "such steps as may be thought conducive towards the early opening of the Three Rivers and Arthabaska branch of the Grand Trunk Railway." The road was completed last summer, but the Grand Trunk Company refuses to work it on the ground that it would not pay its working expenses. The Company also holds, we

believe, that though the road was built for it, it is not obliged to assume control.

Atlantic and Great Western Railway.

The track of this road is laid as far as Tallmadge, and cars ran to Franklin Mills last week. It is probable that the track will be laid to Akron during the present month, and cars run regularly to Salamanca thereafter. The length of the road from Akron to Salamanca is 200¼ miles. It is 99 miles from Akron to Meadville.

The trestle work at Old Forge is rapidly approaching completion. It is 55 feet high and more than 300 feet long.

The rolling stock of the road is spoken of by those who have seen it as of the most substantial quality. There are thirty locomotives burning coal, besides the locomotives for passenger trains which burn wood, to be used east of Akron.

The Directors held a meeting at Meadville, on the 7th, at which it was resolved to complete the road without delay to Cincinnati. A new track is to be built forthwith, all the way to the Queen City. This is a variation from the original intention, which was to connect with the Ohio and Mississippi Railroad at Cincinnati, by means of a third rail on the Cincinnati, Hamilton and Dayton Railroad. We understand that the financial affairs of the road are in a most healthy condition.

The two hundred miles of road completed speak louder than words of the silent, patient activity of the accomplished Engineer, Mr. T. W. Kennard, whose faithful and unpretending services have wrought such magnificent results.

Chicago and Alton Railroad.

The earnings of this road for the three months ending March 31, 1862 and 1863, have been as follows:

	1862.	1863.
Passengers	$84,756 76	$133,068 22
Freight	152,252 41	166,537 06
Sundries	10,355 92	12,909 14
	$217,365 09	$313,414 42
Military, Jan. & Feb.	38,285 61	31,454 65
Total	$255,650 70	$344,869 07
—increase in 1863	$89,218 37.	

Fitchburg Railroad Company.

A special meeting of the stockholders of this company was held in Boston on the 7th inst., to act upon the contract made by the directors with the Commonwealth in relation to the completion of the Troy and Greenfield Railroad and Hoosac Tunnel.

The President read the contract, which recites the efforts make by the Troy and Greenfield Railroad Company to complete their road and the tunnel, the importance to the rest of the railroads forming the line from Boston to Troy that they become a part of a through line to the West, and their willingness to pay a just proportion of their earnings from business which may pass over that road such as shall be an equitable return for the benefit received.

The Fitchburg Company, the Vermont and Massachusetts Railroad Company and the Troy and Boston Railroad Company, in consideration that the Commonwealth of Massachusetts shall complete the railroad and tunnel, agree to pay each twenty per cent. of its gross earnings upon such passenger and freight business as shall pass upon or over any part or the whole of such railroad, subject to numerous conditions.

On motion the act of the Directors was ratified and approved, a few votes being thrown against it.

On motion the Directors were authorized to execute any other agreement which might be thought necessary or proper or expedient in their judgment to carry out the agreement with the Commonwealth.

New York Central Railroad.

The directors of this company propose to replace the $3,000,000 seven per cent bonds to become due on the 15th of June, 1864, by an issue, having twenty-five years to run, of Five Per Cent, Coupon Bonds, to mature on the 15th of December, 1887, with interest from the 15th of December last, payable in New York semi-annually on the 15th of June and the 15th of December.

An allowance of Three Per Cent. for the difference in interest between the three Coupons yet to mature on the outstanding Bonds, and those of corresponding dates on the proposed issue, will be made to the holders of the former on the surrender of the Bonds held by them to be exchanged for the new Bonds.

The option of the new bonds now offered to the holders of those of 1864, will remain open until and including the 30th day of April next, unless withdrawn, before that time, by at least ten days' previous public notice.

The bonds will be of the denomination of $1,000, only, except that registered bonds, without coupons, of the denomination of $5,000, will be issued to parties applying for them.

A sinking fund of two per cent. per annum on the whole amount of the issue will be applied to its reduction or to providing means towards its payment, in such manner and under such regulations as the Directors may from time to time prescribe.

Pennsylvania Railroad.

During the year 1862, there were passed over the Pennsylvania Railroad and its branches 108,524 troops. The whole number of passengers passing westward was 490,009, and those coming eastward numbered 436,360. In addition to the above, 11,880 emigrant passengers passed over the road westward, of which only 828 were way passengers.

The cost of running locomotives on the Pennsylvania Railroad is as follows, counting the average per hundred miles:—Passenger engines on the eastern division, $5 34 for repairs; fuel, $5 92; stores, 88c.—making a total of $12 14. The cost of freight engines was $13 70. The total cost for passenger engines on the middle division was $10 77, and for freight engines $19 19; and on the western division, $15 04 for passenger and $15 59 for the freight engines, per 100 miles. The fuel for the engines on the western division is over $2 more the hundred miles than on the eastern.

Bear Gap and Tremont Railway.

A bill has been introduced into the Senate of Pennsylvania to incorporate the Bear Gap and Tremont Railroad Company. The corporators are J. Edgar Thomson, Wister Morris, A. J. Derbyshire, Jesse Cook, John E. Hoffman, R. A. Wilder, Adam Wolf, R. E. Green and C. Tower. They are empowered to construct a railroad from a suitable point at or near Bear Gap, in Dauphin county, to Tremont, in Schuylkill county, with the right to connect with any railroad in either Dauphin or Schuylkill counties. The capital stock is $500,000.

West Pennsylvania Railroad.

This road commences at Blairsville, where it connects with the Pennsylvania Road, and will run to Freeport, near which it will connect with the Allegheny Valley Road. The intention is to build a great oil depot at Freeport, and ship the oil thence East, instead of taking it to Pittsburg, as now. The road will be about fifty miles in length, and the cars, it is believed, will be running on it by the middle of next fall. It is an important work, more especially if the intention to make Freeport a great depot for the reception and shipment of oil be carried out as now proposed.

Cincinnati, Wilmington & Zanesville R. R.

The Columbus *State Journal* says that this road is to be offered for sale at public auction some time during this month. If so, we hope that it may fall into the hands of those who have the means and energy to push the western terminus of the same through to Cincinnati, and thus make it one of the best roads in the country.

Hudson River Railroad.

This company, having decided to extend its second track during the ensuing season from Poughkeepsie to Rhinebeck, and to provide for the cost of the same by an issue of stock, invites proposals at not less than par for 2,278 shares, being the whole of the capital stock authorized by the charter, yet remaining unissued. Terms of payment: Twenty-five per cent. at the time of the acceptance of the proposal, and the balance within 90 days from that date, interest being charged upon the same, at the rate of six per cent. per annum.

Chicago and Alton Railroad.

At a meeting of the Stockholders of the Chicago and Alton Railroad, held a day or two since, the following Directors were elected: James Robb, John B. Drake, John Crerar, Chicago; Virgil Hickox, Springfield; Isaac Sherman, George A. Robbins and Albert Havermeyer, New York.

Junction (Philadelphia) Railroad.

This road, which is now being constructed under the auspices of the Pennsylvania, Philadelphia and Reading, and Philadelphia, Wilmington and Baltimore Railroad Companies, on the west bank of the Schuylkill River, from Gray's Ferry to Columbia Bridge is rapidly approaching completion, and it is thought will be in full operation by midsummer. The work of grading is being carried rapidly forward. That portion of the road between the Wire Bridge and Belmont Cottage has been already graded, and the track will shortly be laid. The new road will extend a distance of five miles, and will unite the Reading with the Pennsylvania, and the Philadelphia, Wilmington and Baltimore roads, via the Media and West Chester road. It will cross the Pennsylvania road near the Wire Bridge, and passing under Market and Chestnut streets by tunnels, will terminate at Gray's Ferry. The object of the new enterprise is to enable freight intended to be transferred from one road to another to pass round the city and thus evade the present nuisance of transporting the same by horse power through the streets. When this road is completed the city will be surrounded by a locomotive railroad, and increased facilities will be afforded of transporting goods and at reduced expense. The cost of the new road will be in the neighborhood of $500,000

Peninsular Railroad of Michigan.

The people of Chicago are making an effort to establish direct railroad communication between that city and Lake Superior, by building a road from the head of Little Bay de Noque, on Lake Michigan, to the iron region, a distance of about 47 miles. In recommending this project, the Hon. Wm. B. Ogden, in his speech before the Chicago Board of Trade on the 27th ult., clearly defined the importance of its construction, not only to the interests of Chicago, but to those of the entire Northwest.

In illustrating the rapidly increasing trade of Lake Superior, Mr. Ogden gave the following statistics (compiled from the reports) exhibiting the trade through St. Mary's Ship Canal:

	1852.	1855.	1859.	1862.
Iron ore (tons)	...	1,447	65,579	115,721
Charcoal Pig Iron	...	....	7,268	8,500
Rough Copper	 887	3,196	6,041	10,000
Passengers through canal in 1862				8,468

The iron above alluded to is carried from the Iron Mines to Marquette, a distance of 16 miles, at $1.00 per ton of 2,000 lbs., or 6½ cents per mile, the shippers being required to load and unload it themselves. This is probably the highest railroad freight charged in this country. Yet, notwithstanding the disadvantages of deep grades and sharp curves, this road at its exorbitant rates, shows the following business of 1862:

Tons of ore carried	140,458
Merchandise to Iron Mines (tons)	1,268
Passengers over road	5,168

This road is now a monopoly, and furnishes the only outlet from the iron mines. The increasing popularity of the Lake Superior Iron is shown by the increasing demand. Several furnaces are months behind with their orders, and Juniatta iron is very nearly driven from market by the introduction of the Lake Superior iron. The demand for either iron or copper cannot now be satisfied for want of transportation facilities. Very few large ships now pass through the ship canal, as from five to six days' extra time is consumed by them in going to Marquette, over that required to go to Bay de Noc; hence, unless a very great advantage was secured in freights, to overbalance the difference in distance, etc., Bay de Noc presents superior claims. Besides the other advantages water communication can be maintained two months longer with Bay de Noc than through Lake Superior with Marquette.

Mr. Ogden explained the connection which would naturally be made with this road, extending into the very heart of the copper region, and gave the following statement of the seven leading copper mines:

	Cost of stock.	Market value.	Dividends.
Minnesota	$66,000	$2,050,000	$1,500,000
National	100,000	660,000	80,000
Cliff	118,000	1,800,000	1,300,000
Pewabic	120,000	1,100,000	80,000
Franklin	80,000	1,100,000	40,000
Quincy	160,000	1,800,000	80,000
Central	180,000	1,120,000	.....
Total 7 mines	$824,000	$9,630,000	$3,080,000

The maximum grade of the Peninsular Railroad from Lake Michigan to the iron mines, is forty feet both ways, and about the same as the maximum grades on the Northwestern Railroad. The facts given from actual survey, show this to be a very favorable route, cheaply constructed, and through a densely timbered country.

Atlantic and Great Western Railroad.

A meeting of the New York, Ohio and Pennsylvania Directors of the Atlantic and Great Western Railway was held at the office of the Company in Meadville, on the 7th ult. The object was chiefly to consolidate the three divisions of the road in order to facilitate transportation of passengers and freight. H. F. Sweetzer, Esq., was appointed General Superintendent of the whole line. Mr. Sweetzer has entitled himself to this important and responsible position by his signal success in the management of the Eastern Division of the Road, as well as by his previous career.

At a subsequent meeting of the Joint Executive Committee of the above Divisions of the road, J. C. Calhoun Esq., was appointed Auditor of the whole Line. This appointment is made in a proper and appreciative recognition of Mr. C.'s distinguished abilities in that department of Railroad science.

Railroad Extension.

The St. Louis *Democrat* says that arrangements are pending for the immediate extension of the Belleville branch of the Terre Haute, Alton and St. Louis Railway. It is contemplated to finish the road as speedily as possible to a point on the Illinois Central Road, near Carbondale, and ultimately extend it to Paducah. This extension would shorten the trip to Cairo fifty miles and enable cars to run from east St. Louis to the latter point without change.

Columbus and Piqua Railroad.

The Urbana *Citizen* states that the railroad now in course of construction from Covington on the Columbus and Piqua Road, to the State line near Richmond, Indiana, will be completed by the first of May next. The rails are now nearly all laid as far as Greenville. As soon as the spring opens a telegraph line will be constructed along this road between Columbus and Indianapolis.

Milwaukee & Northern Illinois Railroad.

The following gentlemen have been elected directors of this company for the ensuing year: Geo. Dyer, Wm. P. Young, Edward Roddis, O. E. Britt, C. G. Cotting, G. Pfister, P. Gardiner, P. Belden, and A. Cooper. President, Philo Belden. Vice-President, E. Roddis. Treasurer, Geo. Dyer. Secretary, W. G. Parsons.

Pennsylvania Railroad.

The recent election for directors of this company resulted in the choice of the following gentlemen: J. Edgar Thomson, Josiah Bacon, Thomas Mellon, John Hulme, G. D. Rosengarten, Wistar Morris, G. W. Cass, Pittsburg, Wm. H. Smith, Pittsburg, Samuel T. Bodine, Joseph B. Myers.

☞ An experimental trip has been made, on the Philadelphia, Wilmington and Baltimore Railroad, of a new passenger car, which is so constructed as to avoid the annoyance of dust and to insure good ventilation. It is known as "Ruttan's Patent," and has already been adopted on several roads. Beneath the floor of the car are water tanks, with large surface, over which the air is forced before being admitted into the car, and thus freed from dust and cinders. It is designed to introduce the improvement upon the through cars between New York and Washington, in which it or something similar is certainly needed.

The Atlantic Cable.

The subscriptions to the capital stock of the Atlantic Telegraph Company now exceed 50,000 pounds sterling among the bankers and leading merchants of this city, and additional subscriptions are being received daily. The amount already subscribed in this city and in London insures the success of the great enterprise next year beyond all reasonable doubt.

Railway Fares.

Editor Railroad Journal:

Sir—I notice that my communication on the subject of "Railway Fares" has attracted the attention of the *Railway Times*, and the proposition set forth by me for consideration is pronounced against. Without going into an argument, for there is no occasion for it, I have to say, that the principle I advocated is now actually in existence. A through passenger pays less fare in proportion than a way traveler, on all lines. What I suggest is that the same principle might also be applied to through travelers, by making a reduction in proportion to the whole distance traveled. I have no doubt it will be tried some future day, after the long lines become amalgamated, and the plan can be conveniently tested.

*

Philadelphia and Reading Railroad.

The Philadelphia and Reading Railroad Company has taken possession of the little Schuylkill and the East Mahanoy Railroads, under their lease with the Little Schuylkill Company. The passenger cars of the Reading Company will now make their connection with the Catawissa Company's cars at Tamaqua, instead of at Port Clinton, as heretofore. Coal and passenger trains over the Mahanoy road will now run from Tamaqua, via the Tunnel.

Railroad Earnings--Weekly.

The earnings of the Chicago and Alton Railroad for the 4th week of March, 1863, were:

Passengers	$13,230 12
Freight	17,671 87
Sundries	1,035 83
Total	$31,937 82
Same week last year	19'379 84
Increase	$12,557 98

The earnings of the Cleveland and Toledo Railroad for the 4th week of March, 1863, were $49,410 00
Same week, 1862 ..... 28,804 00
Increase $20,606 00

The earnings of the Galena and Chicago Union Railroad for the 4th week of March, 1863, were:

Freight	$23,603 18
Passengers	8,605 26
Mails	1,250 00
Total	$33,458 44
Same week, 1862	17,641 22
Increase	$15,817 22

The traffic of the Great Western Railroad for the week ending March 27, 1863, was as follows:

Passengers	$20,811 17
Freight and live stock	49,842 28
Mails and sundries	1,844 72
Total	$71,498 17
Corresponding week of 1862	56,467 28
Increase	$15,030 89

Indebtedness of the World.

The following sketch of the debts of the principal nations of the world to the year 1862, is taken from the recent speech of Mr. Spaulding in the House of Representatives of the United States:

Countries.	Public Debt in local coin.	Approximate amount in dollars.
Austria—florins..	2,661,568,836	1,200,000,000
Baden—florins...	75,000,000	33,750,000
Bavaria—florins .	342,903,514	155,000,000
Belgium—francs.	648,450,746	129,700,000
Bolivia—dollars..	100,000	100,000
Brazil—dollars...	68,137,067	68,137,067
Brunswick-thal'rs	11,251,219	8,000,000
Chili—dollars....	12,912,000	12,912,000
China—unknown.		
Denmark—rix dol.	100,217,574	100,000,000
France—francs...	8,840,000,000	1,768,000,000
Frankfort—florins	16,551,403	7,500,000
Great Britain—£.	801,808,607	4,364,590,000
East India—p'nds	98,107,460	
Greece—nahmes..	110,586,805	18,500,000
Hayti—dollars...	12,500,000	12,500,000
Hamburg—thal'rs	29,568,183	20,000,000
Hanover—thalers	46,344,836	31,000,000
Hesse, Elective—thalers.....	10,000,000	6,750,000
Hesse, Ducal—florins	18,812,300	8,500,000
Kingdom of Italy —francs.....	3,017,867,356	600,000,000
Mexico—dollars..	145,000,000	145,000,000
Nassau—florins..	28,755,500	13,000,000
New Granada—dollars.....	45,000,000	45,000,000
Oldenburg-florins	4,243,000	2,000,000
Netherlands—flo's	1,039,356,581	463,000,000
Peru—dollars ...	42,500,000	42,500,000
Portugal—reis...	137,997,000,000	165,000,000
Prussia—thalers..	274,342,365	186,000,000
Russia—roubles .	1,573,000,000	1,180,000,000
Rome—scudi	66,471,274	66,500,000
Saxe—thalers ...	62,563,638	42,000,000
Spain—reals.	13,485,099,105	774,250,000
Sweden and Norway—rix dolls.	45,000,000	45,000,000
Switzerland—none		
Turkey—piasters.	5,106,152,500	200,000,000
Venezuela—dolls.	3,658,400	3,658,400
Wurtemburg—florins.....	70,643,302	32,000,000

In the reduction of the several foreign values into dollars, fractions are omitted, so that the last column shows the public debts, in round numbers, in Spanish dollars. Of course, by calculating each country's money at its exact value, there will be some small difference.

Manhattan Mining Company.

This Company is now fully organized, and about to commence work on their location in the Keweenaw District, southwest of Eagle River. Some mining has been done on this location before, by way of exploration, which has disclosed veins of sufficient richness to warrant a large outlay in improving it. In sinking a shaft 70 feet, over four tons of copper were taken out, being sufficient to pay the expense of the work. This is more than can be said of most trial shafts.

10 NEW BOX CARS,

4 ft. 8½ in. gauge, 23 ft. long, First Class Cars, Iron Trucks, 3x1 Iron, Wrought Iron Buffers, Rubber Springs, Hammered Axles 280 lbs. each.

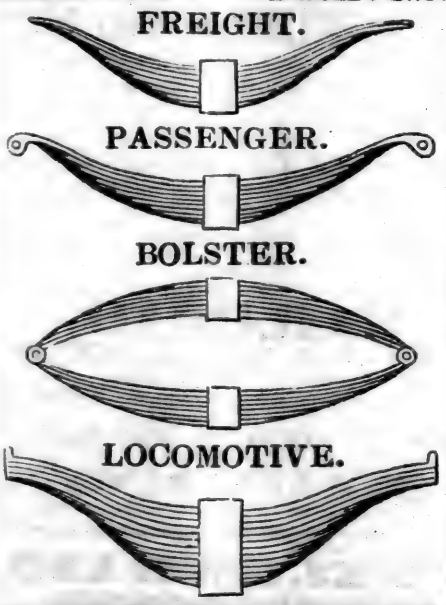
NOTICE
TO
RAILROAD CONTRACTORS.



PROPOSALS will be received at the Company's office at Bordentown, New Jersey, until the 13th of April next for the GRADING of a Double Track Railway from Trenton to Dean's Pond, a distance of 17 miles, (where it intersects the Double Track to New Brunswick) on the Branch of the Camden and Amboy Railroad.

Plans, Profiles, and Specifications, can be seen at the office by the 9th of April, when the line will be ready for inspection.

WM. COOK,
Engineer Camden & Amboy Railroad.

BORDENTOWN, March 30th, 1863.

RAILWAY SPRINGS.

THE SUBSCRIBER OFFERS TO RAILROAD SUPERINTENDENTS, LOCOMOTIVE AND CAR BUILDERS, A SUPERIOR QUALITY OF

ELLIPTIC AND SEMI-ELLIPTIC
SPRINGS,

Made at his Shops in Philadelphia. Employing only the most experienced workmen and BEST MATERIAL, he pledges himself to furnish a Spring of the greatest Elasticity, and one which shall be uniformly reliable in its carrying weight.

All Springs tested to double their usual load.

FINK'S PATENT IRON RAILROAD BRIDGE.

THE undersigned is prepared to manufacture and build in any part of the United States and Canada, at reasonable terms, FINK'S PATENT IRON BRIDGE in spans from 20 to 300 feet. The same is favorably known, well tested and already extensively introduced, is stronger and more economical than any other Bridge now in use, requires no repairs, and no adjustment, but is perfectly adjustable. For plans and particulars apply to

SUBSTITUTE FOR

CAR DUCK.

Kingman's Car Covering.

THIS is a kind of Elastic Mastic, a thick coating of which is applied to the top of the Car, and into it a heavy Burlap or Bagging is imbedded and thoroughly painted, thus making a covering VERY MUCH LIKE **CAR DUCK**, but at about one half the cost. It is now successfully used by several New England Roads and Car builders. Directions and particulars sent when requested. This Mastic and Burlaps for sale by

WILLIAMS & PAGE,
67 Water street,
March, 1863. **Boston.**

FOX LATHES.

F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & Co., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciat d by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT REOILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downward is beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Tufts's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used in-tead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.

Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

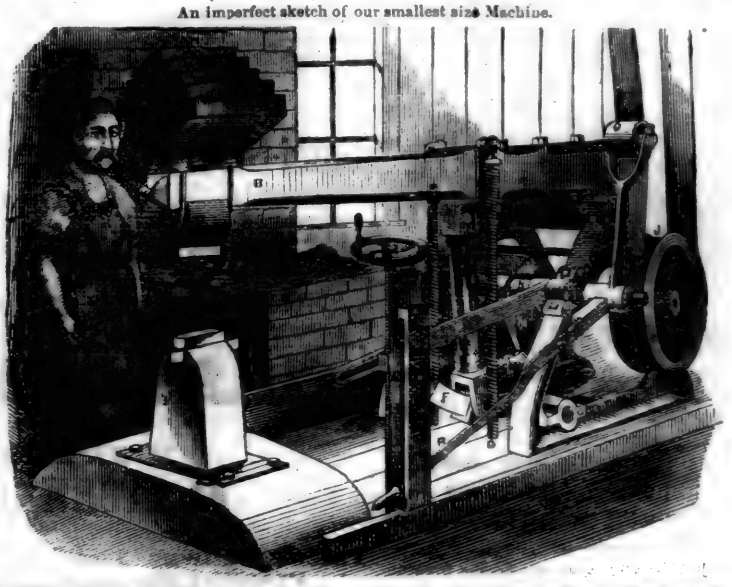
ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past ten years with uniform success, they confidently offer their services to those requiring such aid.

VENTILATION.



THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS**, etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

Address **HENRY RUTTAN,**
Coburg, Canada.

AMES IRON WORKS,
OSWEGO, N. Y.,

SOLE AND EXCLUSIVE OWNERS AND MANUFACTURERS, UNDER PAYE'S PATENT.

An imperfect sketch of our smallest size Machine.

PAYE'S PATENT FORGE HAMMER, A HAMMER ADAPTED TO BOTH HEAVY AND LIGHT FORGINGS, with an adjustable stroke of from one inch to three feet. This hammer is adapted to both heavy and light forgings; the force of the blow being entirely at the will of the operator, and for all forgings under six inches, either round or square, is the best hammer now in use, and requires but one-half the power used by every other hammer to do the same work. For an engraving and description of this hammer, see page 1, Vol. V (new series) of the SCIENTIFIC AMERICAN; some valuable improvements have, however, been since made. All communications should be addressed to H. M. Ames, Box 422, New York, or Ames Iron Works, Oswego, N. Y.

These hammers may be seen in operation at the Allaire, Neptune, Secor, Delamater, Fletcher & Harrison, Duncan & Crampton, Anderson & McLaren, Duhurst & Emerson, Charles T. Porter, all in New York City; Joseph Colwell, Jersey City; Wm. White, Newark, N. J.; Providence (R. I.) Tool Co.; Whiting & Wilcox, Keigh's Point, Phila.; Mallory & Cottrell, Mystic Conn.; J. Dillion, Rondout; James Horner & Co., Sing Sing; Henry Esler & Co., Brooklyn; James B. Eads, St. Louis, Mo.; Central Railroad Shop, Albany; Burlington, Quincy & Chicago Railroad Shop, Ames Iron Works, Oswego; M. Guinness, Albany; Sweet Brothers, Syracuse.

ERIE RAILWAY.

PASSENGER TRAINS leave, via Pavonia Ferry, from foot of Chambers st., as follows, viz:

7.00 A. M., EXPRESS, for Buffalo, and principal intermediate Stations.

9.00 A. M., MILK, *daily*, for Otisville, and intermediate Stations.

12.15 A. M., ACCOMMODATION, *daily*, for Port Jervis, and principal Stations.

3.30 P. M., WAY, for Middletown, Newburgh, Warwick and intermediate Stations.

An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house, it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, 25 cents, Brass, 31 cents, Silver-Plated, 50 cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of $1.35.

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

New York, Saturday, April 18, 1863.

Inter-Oceanic Railways and Transits.

The discovery of gold on the Pacific, has not only added to the amount in circulation nearly one thousand millions of dollars, but has created commercial interests of new conditions and incalculable value. The State of California may consequently be said to dominate the commerce of that ocean, and to be the mistress of its shores. San Francisco has a further remarkable peculiarity hitherto exclusive with the city of New York, that of being a port at which an assorted cargo could always be made up. Indeed it has been said that it was the only one in the world affording that facility. San Francisco, a truly American city, in enterprise, ingenuity, resources, and self-confidence, offers to the ports on the Asiatic coast, to Japan, China, Russia, to the Oceanic islands, and to Australia and the other neighboring settlements, every supply which necessity, civilization, or luxury may demand. A trade is springing up in those directions which bids fair to equal anything yet carried on across the Atlantic.

The current of emigration thither was the first necessity to consider, and the Panama Railway was the result of the sagacity and enterprise of our countrymen. This great success had the effect to inspire similar enterprises of interoceanic railways and transits, and the Nicaragua route was next inaugurated, and for a time was a valuable and well supported avenue for American traffic and passengers. The Honduras scheme was then brought forward to the favorable notice of our own and foreign capitalists, with some show of final success. We now observe that the whole question has come up again in England, and that Capt. Pym of the Royal Navy, a well known Isthmus explorer, has been calling the attention of his countrymen to his plan of an "International transit route through Nicaragua." The following is a report of the substance of his remarks at a meeting of the Society of Arts, as late as the 11th ult.

"He pointed out the importance of the subject as bearing upon the political and commercial position of this country. He described the railroad that now exists across the Isthmus of Panama, which had now the monopoly of the traffic; the company charging rates of transit that were really most exorbitant. As showing the view taken by the American government of the importance of this means of transit to the United States, the author quoted from the state paper in which the Government aid asked for by the proprietors of the Panama line was granted. This document spoke of the advantages the United States would possess over all competitors for the commerce of the Pacific and the East when the line was completed, which would deprive Europeans of the decided superiority which they formerly possessed in their intercourse with nine-tenths of the world, and would place the States far ahead in the race for commercial supremacy."

The route projected by Capt. Pym extends from Gorgon Bay, on the Atlantic, traverses the intervening land as far as the Lake Nicaragua, then skirting the shores of that lake, crossing the river Tipitapa, and reaching the Pacific at the harbor of Realejo, a total distance of 225 miles.

It was strongly urged also, that the monetary interest of England was deeply concerned in a settled and expeditious transit between the mother country, and its possessions in the East, which should be "independent of the control of the United States."

We may thus perceive the natural tendency of the British mind, to strengthen and increase its connections with its dependencies, free from all foreign relations if possible, and in every way to enter upon a contest with the United States for the trade of the Pacific. As long as our routes thither are by the isthmus, the competition will be great. Victoria already plumes itself on rivalling San Francisco. Those isthmus routes are traversed however by the permission of Governments which are subject to change, affected by foreign influence, within the reach of monied speculators, and with but little commercial spirit of their own. All these lines of transit, therefore, are at the best uncertain. We have just seen that the Nicaragua route has been again violently closed against the American contractors. We know too that we have had no diplomatic relations with the Government of Colombia for two years, and have endangered its friendship by recently proposing an armed intervention, and a foreign interference in its domestic affairs. The Panama route is therefore subject to all the risks of a resentment, natural enough after our strange policy. These considerations, therefore, lead us to one foregone conclusion, and no other, that our transit to the Pacific must be over our own soil, and under our own control. The Pacific Railroad is the great remedy for all the disadvantages and delays of the foreign routes. Its construction will settle the question of the supremacy of our trade in the Pacific ocean, beyond all question.

We are happy to have it in our power to add that there is every assurance of an immediate organization of the Pacific Company, under advantages and with influence not deemed attainable a short time since. By the time that the first shovel is put into the ground at the 100° parallel, the public will be surprised to find an Eastern Company at work on a line, which is to form a junction there with the great trunk itself, and by the construction of which the completion of the whole work will be accomplished in three or four years!

The Ottawa Canal.

The Montreal papers continue to advocate the construction of the Ottawa Canal, as being the shortest route between that City and Chicago. It is now proposed to build it for barges, drawing four or five feet of water only, with the capacity of 15,000 bushels. The cost would not then be more than about $19,000 per mile, which was that of the Erie Canal, when it was first constructed, 40 feet wide and 4 feet deep. It is believed the lumber trade alone would produce a large revenue on the cost.

An Invention of Rare Merit.

He described the railroad that now exists across the Isthmus of Panama, which had now the monopoly of the traffic; the company charging rates of transit that were really most exorbitant. As showing the view taken by the American government of the importance of this means of transit to the United States, the author quoted from the state paper in which the Government aid asked for by the proprietors of the Panama line was granted. This document spoke of the advantages the United States would possess over all competitors for the commerce of the Pacific and the East when the line was completed, which would deprive Europeans of the decided superiority which they formerly possessed in their intercourse with nine-tenths of the world, and would place the States far ahead in the race for commercial supremacy."

The route projected by Capt. Pym extends from Gorgon Bay, on the Atlantic, traverses the intervening land as far as the Lake Nicaragua, then skirting the shores of that lake, crossing the river Tipitapa, and reaching the Pacific at the harbor of Realejo, a total distance of 225 miles.

It was strongly urged also, that the monetary interest of England was deeply concerned in a settled and expeditious transit between the mother country, and its possessions in the East, which should be "independent of the control of the United States."

We may thus perceive the natural tendency of the British mind, to strengthen and increase its connections with its dependencies, free from all foreign relations if possible, and in every way to enter upon a contest with the United States for the trade of the Pacific. As long as our routes thither are by the isthmus, the competition will be great. Victoria already plumes itself on rivalling San Francisco. Those isthmus routes are traversed however by the permission of Governments which are subject to change, affected by foreign influence, within the reach of monied speculators, and with but little commercial spirit of their own. All these lines of transit, therefore, are at the best uncertain. We have just seen that the Nicaragua route has been again violently closed against the American contractors. We know too that we have had no diplomatic relations with the Government of Colombia for two years, and have endangered its friendship by recently proposing an armed intervention, and a foreign interference in its domestic affairs. The Panama route is therefore subject to all the risks of a resentment, natural enough after our strange policy. These considerations, therefore, lead us to one foregone conclusion, and no other, that our transit to the Pacific must be over our own soil, and under our own control. The Pacific Railroad is the great remedy for all the disadvantages and delays of the foreign routes. Its construction will settle the question of the supremacy of our trade in the Pacific ocean, beyond all question.

We are happy to have it in our power to add that there is every assurance of an immediate organization of the Pacific Company, under advantages and with influence not deemed attainable a short time since. By the time that the first shovel is put into the ground at the 100° parallel, the public will be surprised to find an Eastern Company at work on a line, which is to form a junction there with the great trunk itself, and by the construction of which the completion of the whole work will be accomplished in three or four years!

The Ottawa Canal.

The Montreal papers continue to advocate the construction of the Ottawa Canal, as being the shortest route between that City and Chicago. It is now proposed to build it for barges, drawing four or five feet of water only, with the capacity of 15,000 bushels. The cost would not then be more than about $19,000 per mile, which was that of the Erie Canal, when it was first constructed, 40 feet wide and 4 feet deep. It is believed the lumber trade alone would produce a large revenue on the cost.

Long Island Railroad.

The following gentlemen have been elected directors of this Company for the ensuing year: Oliver Charlick, Wm. F. Havemeyer, Albert Havemeyer, John M. Freeman, Jas. M. Waterbury, John P. Yelverton, Charles Christmas, of New York; Charles Camblos, E. N. Maitland, A. Hart, Chas. B. Wainwright, of Philadelphia; Stephen Tabor, D. R. Floyd-Jones, of Long Island.

At a subsequent meeting of the board, Oliver Charlick, Esq., was unanimously elected President.

Michigan Southern and Northern Indiana Railroad.

The following is a comparative statement of the earnings and expenses of this road for the fiscal years ending February 28, 1862 and 1863:

	1861-'62.	1862-'63.
Earnings—		
From freight	$1,419,497 94	$1,804,581 78
" passengers	710,417 28	892,138 31

" old construction items		2,070 59
Balance, in increased assets		60,697 16
		$827,862 55

Compared with the previous year, the gross earnings show an increase of $563,313 49; with an increase in expenses of $239,585 50—making the increase in net earnings, $323,727 99. The Report says:

So profitable a business and the sums realized from the sales of assets, combined with the operation of the sinking fund, and with the well organized economy practised in the management, have yielded the following general results. They have enabled the Company to substantially extinguish the floating debt, to make up the arrearages due to the sinking fund, to reimburse the trustee for the sinking fund bonds in the amount of a deficit for an over issue made prior to 1860, to materially reduce the funded debt, and to make much-needed additions to the equipment of the road.

The balance of floating debt, including coupons reported last year as fundable into bonds, and also including recently ascertained and adjusted old liabilities, amounted to $528,900 16.

The arrearages due to the sinking fund, together with the current year's contribution, consumed $278,000 of the earnings.

The return to the trustee and cancelling of 90 bonds permitted by him to be overissued prior to 1860, was necessary in order to prevent the total issue of sinking fund bonds from exceeding the limits guaranteed to the stock and bondholders on the creation of the mortgage and the adoption of the sinking fund policy for the extinguishment of the funded debt.

The expenditures for a grain elevator and 173 new cars amounted to $138,121 21.

Including the $278,000 of bonds contributed during the past year, the commissioners of the sinking fund now hold $650,000 of the sinking fund bonds cancelled. This makes the contribution full to the close of the fiscal year, the first time the contribution has been complete in many years.

Its favorable operation during the past year is exemplified in a reduction of $223,629 18 in the funded debt, notwithstanding the issues of bonds on the settlements of old claims, the payments of accrued interest, and in the retirement of Detroit, Monroe and Toledo Railroad stock. The liabilities of this Company on account of the last-named item having been reduced $122,200.

The overdue first mortgage bonds outstanding at the beginning of the fiscal year, have, save an inconsiderable fraction not yet presented, been paid off and converted into the sinking fund bonds. As but about one-third of the overdue bonds were converted by holders, it was necessary, in order to accomplish the complete conversion, to sell sinking fund bonds, and with the proceeds redeem the overdue bonds. As none of the sinking fund bonds were sold below par and interest, and many of them at a premium, the result was more profitable to the Company than if all the holders of the overdue bonds had converted them when requested to do so.

The successful accomplishment of this important financial measure has placed the sinking fund bonds in the perfected condition of a first mortgage security, and realized the anticipations indulged in our last report of their value as a first class security.

The outstanding plain bonds that fell due on February 1st and March 1st, 1863, have in like manner been paid off, save only a few as yet unpresented for payment.

The Erie and Kalamazoo bonds, which fell due on March 1st, 1862, but which were not, like the first mortgage and the plain bonds, convertible into sinking fund bonds and not eligible to the same provision for payment, have been paid off so far as presented by an exchange for assets of the Company or by the proceeds of the sale of such assets. Interest is no longer accruing on these bonds.

Early in the year the Company disposed of its steamboat property on the best attainable terms, realizing cash therefor. This was necessary, as this property was found by experience to be a source of expense without profit. It was necessary to realize before property so perishable became entirely valueless.

It is apparent that the financial condition of the Company at the beginning of the new fiscal year is free from those heavy embarrassments of arrearages which in previous years have been impending to operate as a sponge, absorbing future earnings. There is, however, no accumulated surplus of earnings on hand, and therefore no moneys in the treasury applicable to a dividend on the business of the past. None could be paid without contracting a floating debt or increasing the funded debt, either of which would be as inconsistent with the financial policy of the management and the good faith they have considered it their duty to observe with all classes of the stock and bondholders as they would be inconsistent with the permanent interests of stockholders.

The question of dividends is strictly a question of future earnings, and not one of past earnings.

The additions during the past year of a new elevator and 173 new cars gave the Company much-needed facilities, which, under the capable management, characterized by untiring energy and faithfulness, of the Vice President and General Superintendent, added largely to the capacity of the road, and fully realized the expectations indulged in our last report of benefits to be derived from the construction.

The soundness of the policy of reducing debt and adding to the capacity of the road have thus been illustrated during the past year by the favorable results of diminished interest charge, and greatly increased earnings.

On the 25th of February last, just at the close of our fiscal year, our new grain elevator, at Toledo, was destroyed by fire. The cost of the building was partially covered by an insurance to the extent of $10,000.

We have again to refer to the detention, of which we had reason to complain in our last report, of eastward bound freight at Toledo and Detroit. Our easterly connections not taking through freight as fast as we are prepared to deliver it, has constantly thrown back upon us an accumulation of freight which has repeatedly obliged us to issue circulars declining for a stated period to receive through freight at any of our stations.

These facts plainly indicate the necessity for additional outlets eastward during the recess of navigation for the increasing products of the great and growing West.

As regards the coming year, it is believed that the same policy which has guided the action of the company in the past year can be most profitably employed in the future.

To this end steps have been promptly taken for the reconstruction of the new grain elevator. It is believed that its prompt re-erection will be in season to enable us to reap the same benefit from its use that we derived last season, and that in the interim the volume of business will not be materially lessened at Toledo.

To this end, also, it is deemed advisable to provide increased depot facilities at other important points on the line.

Also, certain portions of the track which have not heretofore required renewal, will necessarily require relaying during the coming year.

What expenditures these necessary improvements and renewals will require, is at present a matter of indefinite estimate, subject to the conditions of currency, labor, and prices of material and property, except in the case of the new elevator, which has been contracted to be rebuilt at a cost about 30 per cent. above the cost of its erection last year.

From the earnings of the coming year, $114,000 will be required for the sinking fund contribution and interest accruing on the fund, which will swell that fund at the close of the year to $764,000. This material diminution of the funded debt burdening the stock will, in the growing ratio of its operation hereafter, assume proportions that will affect very favorably the intrinsic value of the stockholders' property.

In considering the future, it must be borne in mind that peculiar causes have operated to swell the earnings during the past year. These were the large grain crop and demand therefor abroad,

the closing of the Mississippi, and stimulating effect of the inflation of the currency upon business generally. The last named of these causes has also contributed to swell the operating expenses and the cost of material. How far the existence of these causes will continue to operate hereafter in swelling, or their absence in reducing expenditures, is of course uncertain.

Since our last annual report, the suits then pending between this Company and the Corn Exchange Bank have been settled on terms that insured to this Company all it had claimed in the controversy.

During the past year several suits have been brought against the Company by Elisha C. Litchfield. His alleged claims are of a mixed character, amounting in the aggregate to a considerable sum. Among these claims are charges for commissions for indorsing paper of the Company, and other compensations for pretended services.

The Company has defended these suits, and is prosecuting counter claims against him.

The complicated character of these claims and counter claims promises a protracted litigation.

This Company having refused to acknowledge its liability on an alleged old guarantee of $200,000 of bonds of the Cincinnati, Peru and Chicago Railroad Company, several parties holding these bonds have instituted suits against this Company to test the question of its liability. No decision has yet been reached in any of these cases. We are confident that our Company is not legally nor equitably liable on this claim.

Aside from the above no litigation exists, and the great number of suits found existing three years since have been extinguished.

The following is a comparative statement of the assets and floating liabilities of the company, February 28, 1862 and 1863:

Assets:	1862.	1863.
Cash	$31,440 15	$33,393 31
Bills receivable	2,257 99	2,091 24

	$528,900 16	$245,046 76
Excess of liabilities	$101,695 85	.....
Excess of assets	.....	$242,854 71

Increase of assets $60,697 16; reduction of liabilities, $283,853 40.

The apportionment of freight and passenger earnings of Main Line and Branches for the year 1862–'63 was as follows:

	Passenger.	Freight.
Main Line	$591,460 36	$1,413,979 77
Air Line	63,916 84	192,215 13
Det., Mon. & Toledo.	76,795 75	87,402 58
Adrian & Monroe Br.	19,085 51	40,984 42
Jackson Branch	27,614 42	26,834 71
Three Rivers Branch.	2,099 47	4,718 03
Storage	.....	38,447 14
Military transp'rt'tion	111,165 96	.....
	$892,138 81	$1,804,581 78
Previous year	710,417 28	1,419,497 94
Increase	$181,721 03	$385,083 84

The total number of passengers carried was 396,723; of which 66,138 were through, and 330,585 way. Of the through passengers, 42,863 were 1st class, 14,075 2d class, and 9,200 emigrant—yielding $359,185 92. Of the way passengers, 338,707 were 1st class, 838 2d class, and 1,040 emigrant—yielding $421,786 48. The number of miles traveled by through passengers was 16,544,660; by way passengers, 12,933 716—total, 29,478,376. The average number of miles traveled by each through passenger was 250.15; by each way passenger, 39.12. The average amount received from each through passenger was $5.43; from each way passenger, $1.27. The average amount received from each through passenger per mile was 2.17 cents; from each way passenger, 3.26 cents.

The number of tons of through freight moved eastward was 103,262; do., westward, 53,370—total through 246,632, yielding $933,561 59. Way freight moved eastward, 213,664; do., westward, 83,330—total way, 296,994, yielding $832,573 05. Total tons through and way freight eastward, 406,926, or 74.9 per cent.; yielding $1,313,341 20, or 74.35 per cent.; do., westward, 136,700, or 25.1 per cent., yielding $452,793 44, or 25.65 per cent—the total tonnage being 543,626, against 452,708 the previous year; and the revenue therefrom, as above, exclusive of storage, $1,766,134 64, against $1,390,512 75 the previous year: a gain of 90,918 tons, and $375,621 89, or 27 per cent.

The whole number of locomotives owned by the Company is 83, of which 59 are in good order, 11 wanting slight repairs, 6 general repairs, 5 rebuilding, and 2 not in use. The total number of miles run by engines has been 2,060,637, viz: with passenger trains, 682,382; with freight trains, 1,187,909; with other trains, 190,346. Cost of repairs per mile run, 5.73 cents.

The rolling stock consists of 3 twelve-wheel and 57 eight-wheel passenger cars, 8 second class, 7 emigrant, and 22 baggage, mail and express cars; 13 drovers', 1 paymaster's, 2 wrecking, 20 gravel, 150 stock, and 935 freight cars.

President—E. M. GILBERT, New York.

Directors—E. M. Gilbert, Henry Keep, Allan Campbell, Albert Havemeyer, Milton Courtright, Hamilton White, Nelson Beardsley, William Keep, William Williams, Stillman Witt, John S. Barry, Philo Morehous, M. L. Sykes, Jr.

Vice President—M. L. SYKES, JR., Toledo, O.

Treasurer—HENRY KEEP, New York.

Secretary—D. P. BARHYDT, New York.

General Sup't—JOHN D. CAMPBELL, Toledo.

Cashier—W. F. STAUNTON, Toledo.

Auditor—JOHN J. ADAM, Toledo.

Cleveland and Toledo Railroad.

Annexed is the decision of the Supreme Court of Ohio in the case of the Cleveland and Toledo Railroad to which allusion was made in our last issue:

SUPREME COURT OF OHIO.

The Hon. William W. Peck, Chief Justice, and the Hons. William V. Gholson, Jacob Brinkerhoff, Josiah Scott, and Rufus P. Ranney, Judges, L. Critchfield, Esq., Reporter.

TUESDAY, March 31, 1863.

75. The Port Clinton Railroad Company agt. The Cleveland and Toledo Railroad Company.

142. The Trustees of Portland Township agt. The Cleveland and Toledo Railroad Company.

Reserved in District Court of Ottawa.

GHOLSON, J.—1. If in any case it would be competent for a Court to decree the specific performance of a contract to operate a railroad, requiring, as it would, personal acts, involving the continuous exercise of skill and judgment under varying circumstances and emergencies, it ought only be in a case where the demand for the exercise of such a power was stringent, and to circumstances such as to authorize the Court in making an order to limit its duration as to time, and to define to some proper and reasonable extent the mode and manner in which it should be obeyed.

2. The P. C. Railroad Company leased its franchise and road for the term of ninety-nine years, renewable forever, to the C. and T. Railroad Company, which was a Company created by the consolidation of the T. N. and C. Railroad Company and the Junction Railroad Company. The consideration was in the form of covenants—to pay taxes, to assume debts, to finish the road, and to operate and manage the road in such a manner as would not forfeit or endanger the franchises and corporate rights to the lessor. It appeared that only a small sum of money had ever been paid in by the stockholders of the P. C. Company, which had never been expended; that the cost of any work on the road previous to the lease had been defrayed by the Junction Company, and that this work had been done, and the organization of the P. C. Company made, under the general law of the State, to enable the Junction Company to extend its line in a manner its charter did not permit, Held: That the P. C. Company was not entitled to a specific peformance of the covenant in its lease to operate the road.

3. Where a township through which a railroad might be located was, by a statute, "authorized to subscribe to the stock of said railroad," Held: That, while under such authority, the contract of subscription might contain terms and condition

Long Island Railroad.

The following gentlemen have been elected directors of this Company for the ensuing year: Oliver Charlick, Wm. F. Havemeyer, Albert Havemeyer, John M. Freeman, Jas. M. Waterbury, John P. Yelverton, Charles Christmas, of New York; Charles Cambios, E. N. Maitland, A. Hart, Chas. B. Wainwright, of Philadelphia; Stephen Tabor, D. R. Floyd-Jones, of Long Island.

At a subsequent meeting of the board, Oliver Charlick, Esq., was unanimously elected President.

Michigan Southern and Northern Indiana Railroad.

The following is a comparative statement of the earnings and expenses of this road for the fiscal years ending February 28, 1862 and 1863:

Earnings—	1861–'62.	1862–'63.
From freight	$1,419,497 94	$1,804,581 78
" passengers	710,417 28	892,138 31

		$827,862 55

Compared with the previous year, the gross earnings show an increase of $563,313 49; with an increase in expenses of $239,585 50—making the increase in net earnings, $323,727 99. The Report says:

So profitable a business and the sums realized from the sales of assets, combined with the operation of the sinking fund, and with the well organized economy practised in the management, have yielded the following general results. They have enabled the Company to substantially extinguish the floating debt, to make up the arrearages due to the sinking fund, to reimburse the trustee for the sinking fund bonds in the amount of a deficit for an over issue made prior to 1860, to materially reduce the funded debt, and to make much-needed additions to the equipment of the road.

The balance of floating debt, including coupons reported last year as fundable into bonds, and also including recently ascertained and adjusted old liabilities, amounted to $528,900 16.

The arrearages due to the sinking fund, together with the current year's contribution, consumed $278,000 of the earnings.

The return to the trustee and cancelling of 90 bonds permitted by him to be overissued prior to 1860, was necessary in order to prevent the total issue of sinking fund bonds from exceeding the limits guaranteed to the stock and bondholders on the creation of the mortgage and the adoption of the sinking fund policy for the extinguishment of the funded debt.

The expenditures for a grain elevator and 173 new cars amounted to $138,121 21.

Including the $278,000 of bonds contributed during the past year, the commissioners of the sinking fund now hold $650,000 of the sinking fund bonds cancelled. This makes the contribution full to the close of the fiscal year, the first time the contribution has been complete in many years.

Its favorable operation during the past year is exemplified in a reduction of $223,629 18 in the funded debt, notwithstanding the issues of bonds on the settlements of old claims, the payments of accrued interest, and in the retirement of Detroit, Monroe and Toledo Railroad stock. The liabilities of this Company on account of the last-named item having been reduced $122,200.

The overdue first mortgage bonds outstanding at the beginning of the fiscal year, have, save an inconsiderable fraction not yet presented, been paid off and converted into the sinking fund bonds. As but about one-third of the overdue bonds were converted by holders, it was necessary, in order to accomplish the complete conversion, to sell sinking fund bonds, and with the proceeds redeem the overdue bonds. As none of the sinking fund bonds were sold below par and interest, and many of them at a premium, the result was more profitable to the Company than if all the holders of the overdue bonds had converted them when requested to do so.

The successful accomplishment of this important financial measure has placed the sinking fund bonds in the perfected condition of a first mortgage security, and realized the anticipations indulged in our last report of their value as a first class security.

The outstanding plain bonds that fell due on February 1st and March 1st, 1863, have in like manner been paid off, save only a few as yet unpresented for payment.

The Erie and Kalamazoo bonds, which fell due on March 1st, 1862, but which were not, like the first mortgage and the plain bonds, convertible into sinking fund bonds and not eligible to the same provision for payment, have been paid off so far as presented by an exchange for assets of the Company or by the proceeds of the sale of such assets. Interest is no longer accruing on these bonds.

Early in the year the Company disposed of its steamboat property on the best attainable terms, realizing cash therefor. This was necessary, as this property was found by experience to be a source of expense without profit. It was necessary to realize before property so perishable became entirely vaiueless.

It is apparent that the financial condition of the Company at the beginning of the new fiscal year is free from those heavy embarrassments of arrearages which in previous years have been impending to operate as a sponge, absorbing future earnings. There is, however, no accumulated surplus of earnings on hand, and therefore no moneys in the treasury applicable to a dividend on the business of the past. None could be paid without contracting a floating debt or increasing the funded debt, either of which would be as inconsistent with the financial policy of the management and the good faith they have considered it their duty to observe with all classes of the stock and bondholders as they would be inconsistent with the permanent interests of stockholders.

The question of dividends is strictly a question of future earnings, and not one of past earnings.

The additions during the past year of a new elevator and 173 new cars gave the Company much-needed facilities, which, under the capable management, characterized by untiring energy and faithfulness, of the Vice President and General Superintendent, added largely to the capacity of the road, and fully realized the expectations indulged in our last report of benefits to be derived from the construction.

The soundness of the policy of reducing debt and adding to the capacity of the road have thus been illustrated during the past year by the favorable results of diminished interest charge, and greatly increased earnings.

On the 25th of February last, just at the close of our fiscal year, our new grain elevator, at Toledo, was destroyed by fire. The cost of the building was partially covered by an insurance to the extent of $10,000.

We have again to refer to the detention, of which we had reason to complain in our last report, of eastward bound freight at Toledo and Detroit. Our easterly connections not taking through freight as fast as we are prepared to deliver it, has constantly thrown back upon us an accumulation of freight which has repeatedly obliged us to issue circulars declining for a stated period to receive through freight at any of our stations.

These facts plainly indicate the necessity for additional outlets eastward during the recess of navigation for the increasing products of the great and growing West.

As regards the coming year, it is believed that the same policy which has guided the action of the company in the past year can be most profitably employed in the future.

To this end steps have been promptly taken for the reconstruction of the new grain elevator. It is believed that its prompt re-erection will be in season to enable us to reap the same benefit from its use that we derived last season, and that in the interim the volume of business will not be materially lessened at Toledo,

To this end, also, it is deemed advisable to provide increased depot facilities at other important points on the line.

Also, certain portions of the track which have not heretofore required renewal, will necessarily require relaying during the coming year.

What expenditures these necessary improvements and renewals will require, is at present a matter of indefinite estimate, subject to the conditions of currency, labor, and prices of material and property, except in the case of the new elevator, which has been contracted to be rebuilt at a cost about 30 per cent. above the cost of its erection last year.

From the earnings of the coming year, $114,000 will be required for the sinking fund contribution and interest accruing on the fund, which will swell that fund at the close of the year to $764,000. This material diminution of the funded debt burdening the stock will, in the growing ratio of its operation hereafter, assume proportions that will affect very favorably the intrinsic value of the stockholders' property.

In considering the future, it must be borne in mind that peculiar causes have operated to swell the earnings during the past year. These were the large grain crop and demand therefor abroad,

the closing of the Mississippi, and stimulating effect of the inflation of the currency upon business generally. The last named of these causes has also contributed to swell the operating expenses and the cost of material. How far the existence of these causes will continue to operate hereafter in swelling, or their absence in reducing expenditures, is of course uncertain.

Since our last annual report, the suits then pending between this Company and the Corn Exchange Bank have been settled on terms that insured to this Company all it had claimed in the controversy.

During the past year several suits have been brought against the Company by Elisha C. Litchfield. His alleged claims are of a mixed character, amounting in the aggregate to a considerable sum. Among these claims are charges for commissions for indorsing paper of the Company, and other compensations for pretended services.

The Company has defended these suits, and is prosecuting counter claims against him.

The complicated character of these claims and counter claims promises a protracted litigation.

This Company having refused to acknowledge its liability on an alleged old guarantee of $200,000 of bonds of the Cincinnati, Peru and Chicago Railroad Company, several parties holding these bonds have instituted suits against this Company to test the question of its liability. No decision has yet been reached in any of these cases. We are confident that our Company is not legally nor equitably liable on this claim.

Aside from the above no litigation exists, and the great number of suits found existing three years since have been extinguished.

The following is a comparative statement of the assets and floating liabilities of the company, February 28, 1862 and 1863:

Assets:	1862.	1863.
Cash	$31,440 15	$33,393 31
Bills receivable	2,257 99	2,091 24

	$528,900 16	$245,046 76
Excess of liabilities	$101,695 85	.....
Excess of assets	.....	$242,854 71

Increase of assets $60,697 16; reduction of liabilities, $283,853 40.

The apportionment of freight and passenger earnings of Main Line and Branches for the year 1862-'63 was as follows:

	Passenger.	Freight.
Main Line	$591,460 36	$1,413,979 77
Air Line	63,916 84	192,215 13
Det., Mon. & Toledo.	76,795 75	87,402 58
Adrian & Monroe Br.	19,085 51	40,984 42
Jackson Branch	27,614 42	26,834 71
Three Rivers Branch.	2,099 47	4,718 03
Storage	.....	38,447 14
Military transp'rt'tion	111,165 96	.....
	$892,138 31	$1,804,581 78
Previous year	710,417 28	1,419,497 94
Increase	$181,721 03	$385,083 84

The total number of passengers carried was 396,723; of which 66,138 were through, and 330,585 way. Of the through passengers, 42,863 were 1st class, 14,075 2d class, and 9,200 emigrant—yielding $359,185 92. Of the way passengers, 338,707 were 1st class, 838 2d class, and 1,040 emigrant—yielding $421,786 43. The number of miles traveled by through passengers was 16,544,660; by way passengers, 12,933 716—total, 29,478,376. The average number of miles traveled by each through passenger was 250.15; by each way passenger, 39.12. The average amount received from each through passenger was $5.43; from each way passenger, $1.27. The average amount received from each through passenger per mile was 2.17 cents; from each way passenger, 3.26 cents.

The number of tons of through freight moved eastward was 103,262; do., westward, 53,370—total through 246,632, yielding $933,561 59. Way freight moved eastward, 213,664; do., westward, 83,330—total way, 296,994, yielding $832,573 05. Total tons through and way freight eastward, 406,926, or 74.9 per cent.; yielding $1,313,341 20, or 74.35 per cent.; do., westward, 136,700, or 25.1 per cent., yielding $452,793 44, or 25.65 per cent—the total tonnage being 543,626, against 452,708 the previous year; and the revenue therefrom, as above, exclusive of storage, $1,766,134 64, against $1,390,512 75 the previous year: a gain of 90,918 tons, and $375,621 89, or 27 per cent.

The whole number of locomotives owned by the Company is 83, of which 59 are in good order, 11 wanting slight repairs, 6 general repairs, 5 rebuilding, and 2 not in use. The total number of miles run by engines has been 2,060,637, viz: with passenger trains, 682,382; with freight trains, 1,187,909; with other trains, 190,346. Cost of repairs per mile run, 5.73 cents.

The rolling stock consists of 3 twelve-wheel and 57 eight-wheel passenger cars, 8 second class, 7 emigrant, and 22 baggage, mail and express cars; 13 drovers', 1 paymaster's, 2 wrecking, 20 gravel, 150 stock, and 935 freight cars.

Cashier—W. F. STAUNTON, Toledo.

Auditor—JOHN J. ADAM, Toledo.

Cleveland and Toledo Railroad.

Annexed is the decision of the Supreme Court of Ohio in the case of the Cleveland and Toledo Railroad to which allusion was made in our last issue:

SUPREME COURT OF OHIO.

The Hon. William W. Peck, Chief Justice, and the Hons. William V. Gholson, Jacob Brinkerhoff, Josiah Scott, and Rufus P. Ranney, Judges, L. Critchfield, Esq., Reporter.

TUESDAY, March 31, 1863.

75. The Port Clinton Railroad Company agt. The Cleveland and Toledo Railroad Company.

142. The Trustees of Portland Township agt. The Cleveland and Toledo Railroad Company.

Reserved in District Court of Ottawa.

GHOLSON, J.—1. If in any case it would be competent for a Court to decree the specific performance of a contract to operate a railroad, requiring, as it would, personal acts, involving the continuous exercise of skill and judgment under varying circumstances and emergencies, it ought only be in a case where the demand for the exercise of such a power was stringent, and to circumstances such as to authorize the Court in making an order to limit its duration as to time, and to define to some proper and reasonable extent the mode and manner in which it should be obeyed.

2. The P. C. Railroad Company leased its franchise and road for the term of ninety nine years, renewable forever, to the C. and T. Railroad Company, which was a Company created by the consolidation of the T. N. and C. Railroad Company and the Junction Railroad Company. The consideration was in the form of covenants—to pay taxes, to assume debts, to finish the road, and to operate and manage the road in such a manner as would not forfeit or endanger the franchises and corporate rights to the lessor. It appeared that only a small sum of money had ever been paid in by the stockholders of the P. C. Company, which had never been expended; that the cost of any work on the road previous to the lease had been defrayed by the Junction Company, and that this work had been done, and the organization of the P. C. Company made, under the general law of the State, to enable the Junction Company to extend its line in a manner its charter did not permit, Held: That the P. C. Company was not entitled to a specific peformance of the covenant in its lease to operate the road.

3. Where a township through which a railroad might be located was, by a statute, "authorized to subscribe to the stock of said railroad," Held: That, while under such authority, the contract of subscription might contain terms and conditions

affecting its subject matter, and the consideration to be paid and received, the making a subscription and paying money for stock could not be made a consideration to sustain a contract giving the township a claim to control the general conduct and discretion of the directors of the railroad company, in matters involving the pecuniary interests of the company and its stockholders, to an amount far exceeding the subscription of the township. It was not the intention of the Legislature to authorize the township to obtain by its contract such a claim, or the directors of the company for the time being so to limit the power and discretion of future boards of directors.

4. Where two railroad companies, in their agreement for consolidation, inserted an article to provide for the completion and running of the route of one of the companies, and the directors of the consolidated company failed to comply with such provisions: Held, That if the duty thus created was owing to all the stockholders, one of the stockholders could not sustain an action against the directors to enforce compliance therewith; and, that if the duty was owing to a class of stockholders, having in respect to the matter an interest or right distinct from another class, any proceeding to obtain relief, for a refusal or neglect on the part of the directors to discharge the duty, must bring before the Court not only the directors of the company, but the two classes of stockholders.

Judgment in each case for defendant.

No. 48. The Trustees of Perrysburg Township agt. Cleveland and Toledo Railroad Company.—The principles upon which Nos. 75 and 142 were decided, apply to this case.

Judgment for defendant.

The Supreme Court is the Court of last resort in Ohio, and the decisions, it will be seen, are all in favor of the railroad company.

The New York Canal Tolls Imposed upon Railroads; their Repeal Declared Constitutional.

THE TOLLS UPON FREIGHT, EXISTING AT THE TIME OF THE ADOPTION OF THE CONSTITUTION IN 1846, WERE NOT A PART OF THE REVENUES OF THE STATE CANALS. THE ACT OF 1861 REPEALING THE LAWS IMPOSING SUCH TOLLS, IS THEREFORE VALID.

This action was brought in behalf of the People of the State of New York against the New York Central Railroad Co. in order to recover the tolls which would have accrued and become payable to the state from the defendant, and the several corporations which were consolidated, and merged in the defendant at its organization, under the laws in force when the present constitution of the state was adopted, had these laws remained in force.

The defendant came into existence in 1853, by the consolidation of several railroad corporations, under the provisions of chapter 76 of the laws of that year. The provisions of the charters of the several companies merged in the defendant concerning the carriage of merchandise and freight other than the baggage of passengers, and the toll or tax to be paid upon the merchandise and freight carried, when the right existed, were not uniform; the right to carry such freight not being conferred upon some of the corporations, while to some the right was granted during parts of the year; some being compelled to pay toll upon the property transported, from which other companies were exempt. In 1844, by statute, the right was conferred upon all the roads to carry freight during the suspension of canal navigation, and the companies were required to report to the commissioners of the canal fund as they should direct, and, with certain exceptions as to local freight on the same roads, to pay to said commissioners "the same tolls per mile on all the goods, chattles and other property so transported, as would have been paid on them had they been transported on the Erie Canal." This law was in force when the constitution of 1846 was adopted. In 1847 the law was amended and in 1851 it was repealed, and the right to carry freight without the payment of toll granted to the several railroad companies. It was claimed by the plaintiffs that the last mentioned act is in contravention of the constitution, and, hence that the defendant, as the successor in interest and liability of the several consolidated companies, is indebted to the state for the tolls, under the acts of 1844 and 1847, upon all the goods transported by the several roads after December 1851, when the repealing act took effect, and before the organization of the defendant, and by the defendant since the consolidation.

The complaint was dismissed by the Circuit judge; his judgment was affirmed by a General Term of the Supreme Court; and the judgment of the General Term is now affirmed by the Court of Appeals, which holds that the tolls imposed at the adoption of the constitution of 1846 were not, within the meaning of that instrument, part of the revenues of the State Canals, though payable to the commissioners of the canal fund; and the act (ch 497 of 1851) repealing the laws imposing such tolls is therefore, consistent with article 7 of the constitution, which irrevocably pledges the revenues of the canals to the payment of certain debts, and to their completion. The following are portions of the opinion rendered at the decision of the case.

ALLEN, J.—A constitution is an instrument of government, made and adopted by the people for practical purposes, connected with the common business and wants of human life. For this reason, pre-eminently, every word in it should be expounded in its plain, obvious, and common sense.

* * * * * *

Seeking the meaning of the framers of the instrument only from the words they have used, and giving these words their ordinary signification, the sense in which they are popularly used, and in which they would be understood by the people who adopted, and for who's government the constitution was intended, the "revenues" of the canals would include only the income derived from the "state canals." This would include tolls, penalties, and rents of surplus water, and any other return which the state might receive from the capital invested in the canals. * * * *

The canals as the property of the state were a source of income to it; and "the revenues of the canals" was significant as denoting that income. There is no ambiguity in the words, and therefore no occasion for resorting to other aids allowable to the interpretation of doubtful or ambiguous phrases. In other parts of the sections quoted, the same form of expression is used to describe the receipts from a given fund or capital; as where, in sections one and two, the principal and income of the sinking funds are mentioned. The framers distinguished very clearly between the annual payments or contributions to those funds, and the profits arising from their investments, and did not deem it necessary to mention the latter as the "income from" the capital, but used the same preposition "of" as when giving directions concerning the "revenues of the canals." The other parts of the sections, embracing the provisions under consideration, give no countenance to the claim, that anything but receipts from the canals were intended by "the revenues of the state canals." The "expenses of collection, superintendence and ordinary repairs," in the first and third sections, can refer to nothing but the canals, and cannot by any latitude of interpretation, embrace railroads or any other subject; and yet, they have no more intimate connection, but precisely the same in the section with "state canals" that "revenues" have. To suppose that in the one phrase the framers intended just what they said—the expenses attendent upon the management of the canals—and in the other they meant contributions of all kinds for canal purposes, and all restrictions and impositions upon commerce for the benefit of the canals or to increase their trade, would be to convict them of a carelessness and a want of appreciation of the importance of giving clear and distinct expression to their meaning, which would be unjust, and a violation of the rule which implies care and deliberation in such a transaction. The direction in the fifth section for the repayment from the canal revenues of every contribution or advance to the canals or their debt, from any service other than direct revenues, is in harmony with and supports the interpretation given to "canal revenues." In the preceding paragraph of the section, the legislature were enjoined to increase the revenues of the sinking funds, for which provision had been made in the sections immediately preceding, with a view to sustain the public credit and preserve the public faith, by equitable taxes, if the funds or either of them should at any time prove insufficient to satisfy the claims of creditors as they became payable. One of these sinking funds was for the payment of the canal debt; and hence the provision referred to, that every contribution or advance from any source, other than direct revenues, was to be a charge upon the canal revenues. Had it been contemplated that the sinking fund for the canal debt was to be made up in part of taxes upon commerce, tolls upon railroad freights, or other auxiliary or indirect contributions, the framers of this section would not have been so careful to indicate that all contributions and advances, other than from direct revenues of the canals, should be repaid from such revenues. The provision for a repayment of the advances was intended as an equitable adjustment of the accounts between the direct revenues of the canals, which had been appropriated in the preceding sections, and the other funds and revenues of the state which might be used in their aid in an emergency and to meet demands upon them.

The words in question, as used by the framers of the constitution, have a clear, distinct, and definite meaning, well understood and easy of application, in the sense in which they are popularly used, and as they would be understood by the people adopting the instrument, and are used with propriety in that sense in the places in which they occur, and convey to the reader an intelligent, clear and practical idea upon the subject to which they relate. By themselves, the sections in which they occur are perfect, establishing a complete, permanent system as connected with the canals, and giving permanent direction to the revenue to be derived from the canals, and adjusting the

claim of the general fund upon them and providing for its payment. There being no ambiguity in the terms employed, or doubt growing out of the language, there is no room for interpretation or occasion or propriety to resort to those extrinsic aids which are sometimes necessary, when the instrument is not, by its directness and clearness of expression, its own interpeter. It is only when the language is not thus distinct and free from doubt that the intention and meaning of an instrument may be sought from other sources. It is a pregnant fact that it was only after twelve years of administration of the government under the constitution—a period extending over more than one-half the contemplated existence of the instrument—that it was first suggested that, possibly, "canal revenues" meant something more than was indicated by the term, and included other sources of the state revenue and other subjects of taxation; and this suggestion was not based upon the language of the instrument, but upon extrinsic facts, and in disregard of the primary rule of interpretation, by seeking to create a doubt rather than to remove it, which is the office of extrinsic facts, when brought in as aids of interpretation.

* * * * * *

The learned Justice here discusses the question at length, in the light of its context, the subject matter, the past legislation and financial history of the state, and the reason and spirit of the requirement, and concludes that no other meaning can be given to the language than that which it evidently imparts. He concludes as follows:

Most certainly, there is no reason to infer, in this case above all others, that it was the intent of the framers of the instrument to deprive the legislature of any of its ordinary and legitimate power to legislate for the advancement of the prosperity of the state, by opening new means and facilities for trade, and new and improved sources of wealth, although the aggregate of canal tolls might be diminished.

I find no provision in the constitution which directly or indirectly, expressly or impliedly, forbids the legislature from releasing the tax upon merchandise transported upon the railways. The act of 1851, repealing the laws imposing the tolls upon goods so carried, was therefore, within the legislative power, and is valid; and the judgment must be affirmed with costs. All the judges concurring.

Judgment affirmed.

Important Decision of the Tax Commissioner.

The Commissioner of Internal Revenue has made the following decision concrning coupons of bonds issued in aid of a railroad company:

When bonds are issued by a State, county, city or town, in aid of a railroad company, whereof the interest is to be paid by the company, the government tax of three per cent. must be withheld, althongh neither bond nor coupon may express the liability of the company, such an arrangement being virtually an indorsement of the company's bonds by the said State, city or town; whether the interest is paid by the State, county, city or town, and received from the railroad company, or paid by the company directly to the bondholders, is immaterial. In either case the managers of the company must account to the government for the tax. Where bonds are issued by or in aid of a railroad company, the interest of which is made payable in a foreign country, such est will not be subject to taxation under the eighteenth section of the excise law.

Detroit and Milwaukee Railway.

A statement of the position of the affairs of the Detroit and Milwaukee has been issued by the board of that company, is being sent to the bondholders by the Great Western Board, with an abstract of the receipts and expenditure up to 31st October, 1862; an estimate of the future results of the line to May 31, 1864; and a proposal for the first and second mortgage bondholders to consent to a further funding of their interest coupons from November 15, 1862, to May 15, 1864, to enable the company to pay off the balance of the liabilities recognized as obligatory by the funded coupon mortgage. The London committee of bondholders, it would appear, do not agree to the proposal of the Detroit and Milwaukee board for a further funding, except upon conditions to which the Great Western of Canada board cannot assent. Under these circumstances it has been suggested that if the interest coupons due on 15th November last, were funded with the others, and a sum of say $250,000 were raised on sufficient security, this balance of liabilities could be at once liquidated, and payment of the 1st and 2nd mortgage bond interest be resumed, provided the net future earnings of the line come up to the moderate estimate formed. The Great Western board would not be indisposed to recommend their shareholders to aid in raising a portion of this sum at the present advantageous rate of exchange, and the London committee of bondholders approve of the suggestion. In order, however, to carry this suggestion, it is necessary that the consent of the first and second mortgage bondholders should be obtained to make the interest of 8 per cent. per annum on this new loan rank as a prior charge to that extent over their respective bonds. The amount of this new capital will not exceed £40,000 sterling, and a circular has accordingly been addressed to the shareholders with a view to ascertain their opinions on the subject.

The circular, which is signed by Messrs. Swinyard and Trowbridge, is as follows:—

The company being unable to meet the interest upon the whole of its funded debt, and also to pay the balance remaining due of the liabilities recognized as obligatory in the funded coupon mortgage of November 15, 1860, the undersigned have been appointed a committee by the board, to confer with the bondholders with respect to the funding of additional coupons. They think the following brief history and accompanying statements will secure the acquiescence of all in the plan submitted.

Anterior to 1860, when the former coupons were funded, there existed upon the property of the company eight mortgages, amounting in the aggregate to about $5,500,000. At the periods of their respective dates, the road was in different stages of completion; some were executed before, and some after the amalgamation of the lines forming the Detroit and Milwaukee; part of them covered the then existing property, while others attempted to extend their liens over futuro acquisitions. When the last loans were made in 1857 and 1858, for which the mortgages now represented by preference shares, were given, little more than two-thirds of the line was completed—viz., from Detroit to Lowell, 124 miles out of 188. Such was the very low value of its bonds, and so large a sum was necessary to complete the line and enable it to earn anything beyond its expenses, that it was impossible to procure, upon the credit of the company, the requisite equipments to run it. The only mode in which this could be effected was to procure third parties to purchase it, who, retaining the title, suffered the company temporarily to use it.

In the summer of 1860, it was found that large sums were due which were liens upon the iron rails. Other sums were due for arrears of wages, and for taxes to the State, and these when added to the value of the rolling stock and property owned by others, and necessary to conduct the traffic of the company, amounted to $500,371 75, exclusive of interest in arrears.

This sum it became the common interest of all those holding the last four mortgages to pay at once. From it there was no escape. Consultations were accordingly held between them. After much deliberation the funding arrangement of 1860 was concluded. By this salutary compromise it was substantially agreed that the last two mortgages should be foreclosed, and the bonds turned into preference shares in a new organization. The entire net income of the road was to be applied to the payment of this debt, which was a lien on the road, and to the purchase of the property used, but not owned by the corporation. To admit of this application of the income, the first and second bondholders of the Detroit and Milwaukee funded five coupons, and third and fourth by accepting shares for bonds, deferred all claim for payment of interest until this debt should be discharged. This, it was expected, would enable the company to pay the debt in full.

Notwithstanding the most strenuous efforts to pay out of the net income the whole of this prior claim, there remains undischarged, as will appear by the accompanying statement, the sum of $186,449 60, besides the interest which has accrued.

But it will be recollected by the bondholders that when this arrangement was entered into, one coupon had been overdue nearly six months, one more was about to fall due, and the time covered by three coupons only, entered into the estimate of traffic necessary to pay the debt. The net traffic in the period between 1st October, 1860, and 31st October, 1862, and its application and results, are set forth in a subjoined statement. Had it been equal to the estimate the debt would now have been paid, and the payment of coupons would have been resumed. The causes of the failure to realize the estimated traffic are fully set forth in the report which accompanied the statement of accounts to 31st December, 1861.

To secure the important advantages contemplated by the adjustment of 1860, it became indispensable to suffer this indebtedness to retain its priority, and it still remains in a condition which enables its holders to enforce its collection in advance of all other securities.

In order to remove this incumbrance from our common property, it is necessary for the bondholders under the first and second mortgages, again to consent to a temporary postponement of interest, by funding four half-yearly coupons—viz., that which fell due 15th November, 1862, and those payable in May and November, 1863, and May, 1864.

It should not be overlooked that the funding proposed is temporary only, and that the principal of the coupons to be funded is to be discharged before any application of income is made to the payment of dividends upon the preference shares. The amount of interest, too, upon all such funded coupons, is fully covered by the very moderate and careful estimate by which it seems clear that at the close of May, 1864, the whole of the remaining debt provided for in October, 1860, will be entirely paid, and thenceforward, if no unforeseen circumstances occur, the company will be able to meet the interest on the whole of its funded debt with regularity and promptitude.

It may increase the cheerfulness and confidence with which bondholders will acquiesce in the present necessity, to call their attention to the familiar fact that since 1857, when the present management became interested in this road, the security for their claims has been fully doubled, and that without the large expenditures subsequently made, and which by the arrangements of 1860, were all devoted to the additional security of these bonds, they could by no possibility ever be worth their par value.

It will be satisfactory to know that the company has regularly paid the interest on the prior mortgages, on the bonds issued for the surrendered coupons, and on the river front mortgages, excepting one of the latter, heretofore held in abeyance.

The company's representatives have just closed a series of interviews with the trustees of the funded coupon mortgage of 15th November, 1860, with the principal bondholders in the United States and Canada, and with the agents of large bondholders in England, representing in the aggregate

a very large portion of the bonds. At these interviews the foregoing facts and estimate have passed in review, and all parties are fully agreed as to the necessity of at once adopting the course herein indicated.

Ample guarantees for the faithful application of the entire net income of the road to the purposes proposed will be given in the mortgage to be settled by counsel for the company and the trustees.

Holders of the first and second Detroit and Milwaukee bonds are requested to give their coupons either to the Secretary in Detroit, Mr. W. C. Stephens, or to Mr. Brackstone Baker, the Secretary of the agency in London, at 126 Gresham House, Old Broad street. Receipts will be given in exchange for the coupons, and on the delivery of those receipts at the offices in Detroit, or at the agency in London, proper bonds, bearing 7 per cent. per annum, with interest coupons attached, which are in course of preparation, will be issued.

It is intended, as on the former occasion, that the coupons shall not be cancelled, but be held in trust for the owners thereof, by the trustees to the mortgage, and that the said mortgage and coupon bonds shall be made payable, as in the former case, on 1st January, 1866, and the interest thereon half-yearly.—*London Railway Times.*

United States Loan and Banking Bill.

The following is the act generally known as the Loan and Banking bill, which passed Congress at the close of the session:

AN ACT TO PROVIDE WAYS AND MEANS FOR THE SUPPORT OF THE GOVERNMENT.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be and he is hereby authorized to borrow, from time to time, on the credit of the United States, a sum not exceeding three hundred millions of dollars for the current fiscal year, and six hundred millions for the next fiscal year, and to issue therefor coupon or registered bonds, payable at the pleasure of the government after such periods as may be fixed by the Secretary, not less than ten nor more than forty years from date, in coin, and of such denominations not less than fifty dollars as he may deem expedient, bearing interest at a rate not exceeding six per centum per annum, payable on bonds not exceeding one hundred dollars, annually, and on all other bonds semi-annually, in coin; and he may in his discretion dispose of such bonds at any time, upon such terms as he may deem most advisable, for lawful money of the United States, or for any of the certificates of indebtedness or deposit that may at any time be unpaid, or for any of the treasury notes heretofore issued or which may be issued under the provisions of this act. And all the bonds and treasury notes or United States notes issued under the provisions of this act shall be exempt from taxation by or under State or municipal authority: *Provided*, That there shall be outstanding of bonds, treasury notes, and United States notes, at any time, issued under the provisions of this act, no greater amount altogether than the sum of nine hundred millions of dollars.

SEC. 2. *And be it further enacted*, That the Secretary of the Treasury be and he is hereby authorized to issue, on the credit of the United States, four hundred millions of dollars in treasury notes, payable at the pleasure of the United States, or at such time or times not exceeding three years from date as may be found most beneficial to the public interest, and bearing interest at a rate not exceeding six per centum per annum, payable at periods expressed on the face of said treasury notes; and the interest on the said treasury notes and on certificates of indebtedness and deposit hereafter issued shall be paid in lawful money. The treasury notes thus issued shall be of such denomination as the Secretary may direct, not less than ten dollars, and may be disposed of on the best terms that can be obtained, or may be paid to any creditor of the United States willing to receive the same at par. And said treasury notes may be made a legal tender to the same extent as United States notes, for their face value, excluding interest; or they may be made exchangeable under regulations prescribed by the Secretary of the Treasury, by the holder thereof at the Treasury in the city of Washington, or at the office of any assistant treasurer or depositary designated for that purpose, for United States notes equal in amount to the treasury notes offered for exchange, together with the interest accrued and due thereon at the date of interest payment next preceding such exchange. And in lieu of any amount of said treasury notes thus exchanged, or redeemed, or paid at maturity, the Secretary may issue an equal amount of other treasury notes; and the treasury notes so exchanged, redeemed, or paid shall be canceled and destroyed as the Secretary may direct. In order to secure certain and prompt exchanges of United States notes for treasury notes when required as above provided, the Secretary shall have power to issue United States notes to the amount of one hundred and fifty millions of dollars, which may be used if necessary for such exchanges; but no part of the United States notes authorized by this section shall be issued for or applied to any other purposes than said exchanges; and whenever any amount shall have been so issued and applied, the same shall be replaced as soon as practicable from the sales of treasury notes for United States notes.

SEC. 3. *And be it further enacted*, That the Secretary of the Treasury be and he is hereby authorized, if required by the exigencies of the public service, for the payment of the army and navy, and other creditors of the Government, to issue on the credit of the United States the sum of one hundred and fifty millions of dollars of United States notes, including the amount of such notes heretofore authorized by the joint resolution approved January seventeen, eighteen hundred and sixty-three, in such form as he may deem expedient, not bearing interest, payable to bearer, and of such denominations, not less than one dollar, as he may prescribe, which notes so issued shall be lawful money, and a legal tender in payment of all debts, public and private, within the United States, except for duties on imports and interest on the public debt; and any of the said notes when returned to the Treasury, may be reissued from time to time as the exigencies of the public service may require. And in lieu of any of said notes, or any other United States notes, returned to the Treasury, and canceled or destroyed, there may be issued equal amounts of the United States notes, such as are authorized by this act. And so much of the act to authorize the issue of the United States notes, and for other purposes, approved February twenty-five, eighteen hundred and sixty-two, and of the act to authorize an additional issue of United States notes, and for other purposes, approved July eleven, eighteen hundred and sixty-two, as restricts the negotiation of bonds to market value, is hereby repealed. And the holders of United States notes, issued under and by virtue of said acts, shall present the same for the purpose of exchanging the same for bonds, as therein provided, on or before the first day of July, eighteen hundred and sixty-three, and thereafter the right so to exchange the same shall cease and determine.

SEC. 4. *And be it further enacted*, That in lieu of postage and revenue stamps for fractional currency, and of fractional notes, commonly called postage currency, issued or to be issued, the Secretary of the Treasury may issue fractional notes of like amounts in such form as he may deem expedient, and may provide for the engraving, preparation and issue thereof in the Treasury Department building. And all such notes issued shall be exchangeable by the Assistant Treasurers and designated depositaries for United States notes, in sums not less than three dollars, and shall be receivable for postage and revenue stamps, and also in payment of any dues to the United States less than five dollars, except duties on imports, and shall be redeemed on presentation at the Treasury of the United States in such sums and under such regulations as the Secretary of the Treasury shall prescribe: *Provided*, That the whole amount of fractional currency issued, including postage and revenue stamps issued as currency, shall not exceed fifty millions of dollars.

SEC. 5. *And be it further enacted*, That the Secretary of the Treasury is hereby authorized to receive deposits of gold coin and bullion with the Treasurer or any Assistant Treasurer of the United States, in sums not less than twenty dollars, and to issue certificates therefor in denominations of not less than twenty dollars each, corresponding with the denominations of the United States notes. The coin and bullion deposited for or representing the certificates of deposit shall be retained in the Treasury for the payment of the same on demand. And certificates representing coin in the Treasury may be issued in payment of interest on the public debt, which certificates, together with those issued for coin and bullion deposited, shall not at any time exceed twenty per centum beyond the amount of coin and bullion in the Treasury; and the certificates for coin or bullion in the Treasury shall be received at par in payment for duties on imports.

SEC. 6. *And be it further enacted*, That the coupon or registered bonds, treasury notes, and United States notes authorized by this act shall be in such form as the Secretary of the Treasury may direct, and shall have printed upon them such statements, showing the amount of accrued or accruing interest, the character of the notes, and the penalties or punishment for altering or counterfeiting them, as the Secretary of the Treasury may prescribe, and shall bear the written or engraved signatures of the Treasurer of the United States and the Register of the Treasury, and also, as evidence of lawful issue, the imprint of the copy of the seal of the Treasury Department, which imprint shall be made, under the direction of the Secretary, after the said notes or bonds shall be received from the engravers and before they are issued; or the said notes and bonds shall be signed by the Treasurer of the United States, or for the Treasurer by such persons as may be specially appointed by the Secretary of the Treasury for that purpose, and shall be countersigned by the Register of the Treasury, or for the Register by such persons as the Secretary of the Treasury may specially appoint for that purpose. And all the provisions of the act entitled "An act to authorize the issue of treasury notes," approved the twenty-third day of December, eighteen hundred and fifty-seven, so far as they can be applied to this act, and not inconsistent therewith, are hereby revived and re-enacted.

SEC. 7. *And be it further enacted*, That all banks, associations, corporations, or individuals, issuing notes or bills for circulation as currency, shall be subject to and pay a duty of one per centum each half year from and after April first, eighteen hundred and sixty-three, upon the average amount of circulation of notes or bills as currency issued beyond the amount hereinafter named—that is to say, banks, associations, corporations, or individuals having a capital of not over one hundred thousand dollars, ninety per centum thereof; over one hundred thousand and not over two hundred thousand dollars, eighty per centum thereof; over two hundred thousand and not over three hundred thousand dollars, seventy per centum thereof; over three hundred thousand and not over five hundred thousand dollars, sixty per centum thereof; over five hundred thousand and not over one million of dollars, fifty per centum thereof; over one million and not over one million and a half of dollars, forty per centum thereof; over one million and a half and not over two millions of dollars, thirty per centum thereof; over two millions of dollars, twenty-five per centum thereof. In the case of banks with branches, the duty herein provided for shall be imposed upon the circulation of the notes or bills of such branches severally, and not upon the aggregate circulation of all, and the amount of capital of each branch shall be considered to be the amount allotted to or used by such branch; and all such banks, associations, corporations and individuals shall also be subject to and pay a duty of one-half of one per centum each half year from and after April first, eighteen hundred and sixty-three, upon the average amount of notes or bills not otherwise herein taxed and

outstanding as currency during the six months next preceding the return hereinafter provided for; and the rates of tax or duty imposed on the circulation of associations which may be organized under the act "to provide a national currency, secured by a pledge of United States stocks, and to provide for the circulation and redemption thereof," approved February twenty-fifth, eighteen hundred and sixty-three, shall be the same as that hereby imposed on the circulation and deposits of all banks, associations, corporations, or individuals, but shall be assessed and collected as required by said act; all banks, associations, or corporations, and individuals issuing or reissuing notes or bills for circulation as currency after April first, eighteen hundred and sixty-three, in sums representing any fractional part of a dollar, shall be subject to and pay a duty of five per centum each half year thereafter upon the amount of such fractional notes or bills so issued. And all banks, associations, corporations, and individuals receiving deposits or money subject to payment on check or draft, except savings institutions, shall be subject to a duty of one-eighth of one per centum each half year from and after April first, eighteen hundred and sixty-three, upon the average amount of such deposits beyond the average amount of their circulating notes or bills lawfully issued and outstanding as currency. And a list or return shall be made and rendered within thirty days after the first day of October, eighteen hundred and sixty-three, and each six months thereafter, to the Commissioner of Internal Revenue, which shall contain a true and faithful account of the amount of duties accrued, or which should accrue, on the full amount of the fractional note circulation and on the average amount of all other circulation and of all such deposits for the six months next preceding. And there shall be annexed to every such list or return a declaration, under oath or affirmation, to be made in form and manner as shall be prescribed by the Commissioner of Internal Revenue, of the President, or some other proper officer of said bank, association, corporation or individual, respectively, that the same contains a true and faithful account of the duties which have accrued, or which should accrue, and not accounted for; and for any default in the delivery of such list or return, with such declaration annexed, the bank, association, corporation or individual making such default, shall forfeit, as a penalty, the sum of five hundred dollars. And such bank, association, corporation or individual shall, upon rendering the list or return as aforesaid, pay to the Commissioner of Internal Revenue the amount of the duties due on such list or return, and in default thereof shall forfeit, as a penalty, the sum of five hundred dollars; and in case of neglect or refusal to make such list or return as aforesaid, or to pay the duties as aforesaid, for the space of thirty days after the time when said list should have been made or rendered, or when said duties shall have become due and payable, the assessment and collection shall be made according to the general provisions prescribed in an act entitled "An act to provide internal revenue to support the Government, and to pay interest on the public debt," approved July one, eighteen hundred and sixty-two.

SEC. 8. *And be it further enacted*, That, in order to prevent and punish counterfeiting and fraudulent alterations of the bonds, notes, and fractional currency authorized to be issued by this act, all the provisions of the sixth and seventh sections of the act entitled "An act to authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States," approved February twenty-fifth, eighteen hundred and sixty-two, shall, so far as applicable, apply to the bonds, notes, and fractional currency hereby authorized to be issued, in like manner as if the said sixth and seventh sections were hereby adopted as additional sections of this act. And the provisions and penalties of said sixth and seventh sections shall extend and apply to all persons who shall imitate, counterfeit, make, or sell any paper such as that used, or provided to be used, for the fractional notes prepared, or to be prepared, in the Treasury Department building, and to all officials of the Treasury Department engaged in engraving and preparing the bonds, notes and fractional currency hereby authorized to be issued, and to all official and unofficial persons in any manner employed under the provisions of this act. And the sum of six hundred thousand dollars is hereby appropriated out of any money in the Treasury not otherwise appropriated, to enable the Secretary of the Treasury to carry this act into effect. Approved, March 3, 1863.

TABULAR STATEMENT, *showing the* WHITE POPULATION OF EACH STATE, 1860—No. OF REPRESENTATIVES IN 38TH CONGRESS AND FOLLOWING (1863—1873): BANK CIRCULATION and BANK CAPITAL OF EACH STATE, JAN. 1863, and the CIRCULATION UNDER ACT OF 20TH FEBRUARY, 1863.

American Railroad Journal.

Saturday, April 18, 1863.

Stock Exchange and Money Market.

The market the last week has been in a feverish state, without any violent symptoms, or dangerous reactions, such as were witnessed some weeks ago. Gold on Tuesday morning opened at 158 and after various falls and rallies, closed at 154¾. Exchange was irregular and without a policy or a premium, that can be considered established, for the strange circumstance is at length perceived, that gold and exchange have parted company, and no longer sympathise with each other as they were wont, for Exchange is lower than gold. So, too, the share market seems to have thrown off its allegiance to the precious metal, and will not lower the quotations of its favorites, though gold does fall. Still more strange, the article has declined in the very face of the most unwelcome news, which is a piece of conduct as unexpected as remarkable in Wall street. The gold speculators have made their greatest profits on its rise, founded on the disasters of the country; and the greater these were, the more jubilant were the speculators for an advance.

At present, gold seems to be a commodity very much shorn of its power and attributes. Its functions are entirely limited to two forms: one, that of remittance abroad for balances due on goods, or to be purchased; the other, that of a custom house payment for duties on imports. Specie is not wanted for any other purposes at present, and it would therefore seem that the elements of excitement are not very favorable at present for any great movement upward.

Money continues to be plentiful. The absorption of the Government 5 20's continues on a large scale, and deposits in the Sub-Treasury are also continuous and in great volume. The share market has also participated in the apparent steadiness of the money market, showing activity and good prices, but no particular excitement. Harlem appears to be the favorite foot-ball of the Wall street players, and the operations in its stock are considered very mysterious by some of our cotemporaries. There is no mystery about it. It is precisely such a stock as can be handled with little money, it offers the possibility of a rise equal to that of the Hudson river, if either of these chances turn up in its favor; viz: amalgamation with the Central; the early construction of the Branch to the Central Park; and the union of the Housatonic with the Harlem at Dover, thus doubling the business of the road. Whenever the managers choose to press these matters to a conclusion, the Harlem will become a first class property; but if they prefer to make money out of it in some other way, they can do so and keep it forever on the curb stone.

The rise in Hudson has been attributed to a corner which appeared to be giving way a few days since, and Erie was literally scrambled for at an advance.

There has been quite a movement in Long Island. At the annual meeting of stockholders held on Tuesday, the usual report was not satisfactory and has been referred to a Committee for further investigation. The new Board propose to make great improvements in the working and management of the line, with a greater disposition to accommodate the local traffic. There is no reason whatever, why Long Island should not increase in production and wealth as rapidly as some of the Western territories which have been penetrated and made what they are by railways. It has a great deal of good land, and a great many branches of industry and commerce that should tell on the receipts of this road.

It is understood that after years of negotiation and difficulty, the Boston and Worcester, and the Western Railroads are finally to amalgamate. A very valuable history of the latter, has recently appeared from the pen of Col. Bliss, and those who wish to learn the obstacles which interpose to the execution of the best works, and to learn also how skill, capital and perseverance may remove them, should read this work.

In conclusion of our remarks for this week, we are compelled to allude to our public affairs, for as these come out in the end, will be the character and conclusion of the financial arrangements which now engross attention and absorb capital. The recent demonstration at Charleston was simply an experiment, showing valuable results. The next subject for the attention of Engineers will be how to pass obstructions in harbors, for forts can no longer bar their entrance.

It is the opinion of foreigners, who are writing upon the subject, that it is not the wish or intention of the master spirits at Washington, to close the war; that it is to be kept along for the benefit of whom it may concern, and finally that exhaustion is to do the work, reconstruct, harmonise and do what nothing else could. If this be true, then the money and the blood thus far expended are to be laid directly at the door of the demagogues who cherish such a policy, and who owe their greatness to their country's ruin.

The Hudson River Railroad Company have disposed of the 2,278 new shares of their stock—issued to build a new double track from Rhinebeck to Poughkeepsie—to Mr. John M. Tobin, at 104½ per cent.

We are informed that the railroad from Erie to Pittsburg, partly owned by the Buffalo and State Line Company, will be finished in good running order by the first of November next.

A meeting of the first mortgage bondholders of the Vermont Central Railroad was held at Boston, at which a committee was appointed to consider the question of a compromise with the Vermont and Canada road, if practicable, etc., to report at an adjourned meeting.

We give elsewhere a full abstract of the recent report of the Michigan Southern and Northern Indiana Railroad Company. It shows that during the fiscal year ending February 28, 1863, the gross earnings amounted to $2,813,831 40. The operating expenses were $1,352,555 61; and the net earnings $1,461,275 79. The proportion of operating expenses to earnings was 48½ per cent. The increase of earnings over last year was $563,313 49. Of this amount $181,721 03 was for gain on passenger, and $385,083 84 on freight engines. The overdue first mortgage bond outstanding last year, have been, with a very small exception, converted into Sinking Fund bonds. Other bonds which fell due have been paid off. The report says that there is no accumulated earnings on hand for a dividend, and that the question of dividend is strictly one of future, and not of past earnings. The funded debt is $9,527,078 33, showing a decrease of $223,629 18. The floating debt is $245,046 76, of which $140,218 31 is for pay-roll of February. The available cash assets are $282,402 27, or $37,355 51 in excess of the debt. The earnings of the road for March were $248,886—an increase over March, 1862, of $95,786.

The report of the Delaware, Lackawanna and Western Railroad Company is given entire.

The earnings of the Erie Railway for March were $946,041, against $638,006 in March, 1862—an increase of $308,035, or nearly 50 per cent. For the first three months of the year they have been $2,611,228; same time in 1862, $1,938,698—an increase of $672,530. The directors state that the earnings in January, February and March are 3½ per cent. on both classes of stock, besides interest and rents. The company did not owe a dollar of floating debt on the 1st of January.

The Illinois Central also shows an increase in March of $85,690; for the three months the earnings have been $803,032, against $607,851 in March, 1862—an increase of $195,181.

The increase in the earnings of the Pittsburg, Fort Wayne and Chicago is also large---being $165,544 in excess of those of March, 1862. For the three months the earnings have been $1,165,270, against $865,456 in the corresponding period of 1862---an increase of $301,814.

Cleveland and Mahoning Railroad.

The business of this road for January, February and March was as follows:

	1862.	1863.	Increase.
Gross earnings	$67,920 65	$88,893 48	$20,972 83
Expenses	33,122 82	37,365 98	4,243 16
Net earnings	$34,797 83	$51,527 50	$16,729 67

Fitchburg Railroad.

At a special meeting of the Fitchburg Railroad Company a vote was passed ratifying the contract of the directors, by which the Fitchburg Company, the Vermont and Massachusetts Railroad Company, and the Troy and Boston Railroad Company, in consideration that the Commonwealth of Massachusetts shall comple the Troy and Greenfield Railroad and Hosaic Tunnel, agree to pay each 20 per cent. of its gross earnings upon such passenger and freight business as shall pass upon or over any part or the whole of such railroad, subject to certain conditions.

The Irving House.

We are pleased to learn, as we do by an advertisement in another column, that this popular establishment still remains open for the accommodation of families and transient guests. The Irving is conveniently located on the corner of Broadway and Twelfth st., (entrance on Twelfth street). Attached to it is a first class *Restaurant*, the entrance to which is on Broadway. The Irving is conducted upon the European plan, which is a great accommodation to the guests as well as to the public at large. The rooms are airy and comfortable, the table well spread, and the charges unusually moderate. The proprietors, Messrs. HUNT & NASH, have had great experience in catering for the public, having been for a long time connected with first-class establishments in this city and elsewhere.

Erie and Pittsburg Railroad.

This Company was chartered, as the successo to the Pittsburg and Erie Railroad Company, April 15, 1858. Towards its construction the Erie and North East railroad company was required to subscribe, in stock, the sum of $400,000—this being one of the conditions demanded by the State of Pennsylvania for its quiet enjoyment of the right of way through that State. With the proceeds of this subscription, together with about $30,000 from individual stockholders, and some $250,000 advances by the Buffalo and State Line Railroad Company, the road was constructed, and opened for business in March, 1860, from Girard Station, (a point on the Cleveland and Erie Railroad, 15 miles beyond Erie,) to Jamestown, a distance of 40.25 miles. The southern section of the road, from Jamestown to Newcastle, 40.9 miles in length, is we understand, rapidly approaching completion, and will be opened for business in the whole of this year. At Newcastle, its southern terminus, commences the Pittsburg, Newcastle and Cleveland Railroad, 13 miles in length, also in progress, which will continue the line to Darlington, a point on the Pittsburg, Fort Wayne and Chicago Railway, 40 miles west of Pittsburg. At Newcastle, the Cleveland and Mahoning Railroad will form a junction. By way of Darlington and Newcastle, Pittsburg will be 138 miles from Cleveland and 133.34 miles from Erie.

Railways in Denmark.

The Danish Parliament has passed several bills, whereby the net of State railways may be regarded as settled. The net spreads over North Jutland and Fyen, and consists of a trunk line from Aalborg in the north of Jutland over Aarhus and Fredericia to Vamdrup on the Sleswig border, and a branch from Aarhus over Viborg to the west of the Limfiord. On Fyen the line will run from Nyborg over Odense to Strib, opposite Fredericia in Jutland. The connection between the Zealand line and the Fyen line, and between this and the Jutland, will be by means of a steamferry for goods and passenger waggons. As soon as a similar communication is established between Helsingborg in Sweden and Elsinore in Zealand, the whole Scandinavian north will have a satisfactory iron route to the European continent. The execution of this railway-net has been intrusted to Sir Morton Peto. Its whole length is about 300 English miles, and its total expense about 16 millions of Danish dollars. In order to complete the system, Sir Morton is bound to connect the Jutland with the long-since finished South Sleswig line; while the Zealand, whose line runs from Copenhagen to Korsoer and the Great Belt, is now throwing out a line from the capital over Frederickshorg, the King's former residence to Elsinore. —*Danmark.*

Railroad Earnings--Weekly.

The earnings of the Grand Trunk Railway for the weeks ending March 28 and April 4, 1863, were:

	March 28.	April 4.
Passengers	$22,640 53	$25,428 65
Mails and sundries	4,200 00	3,880 00
Freight and live stock	57,772 30	50,666 07
Total	$84,612 83	$79,974 72
Same weeks, 1862	92,083 37	85,018 41
Decrease	$7,470 54	$5,043 69

The traffic of the Great Western Railroad for the week ending April 3, 1863, was as follows:

Passengers	$22,512 66
Freight and live stock	44,970 74
Mails and sundries	1,526 69
Total	$69,010 09
Corresponding week of 1862	59,863 16
Increase	$9,146 93

The earnings of the Galena and Chicago Union Railroad for the 1st week of April, 1863, were:

Freight	$20,702 35
Passengers	9,768 69
Mails	1,250 00
Total	$31,721 04
Same week, 1862	21,844 92
Increase	$9,876 12

The earnings of the Cleveland and Toledo Railroad for the 1st week of April, 1863, were $29,884 00
Same week, 1862 21,225 00
Increase $8,559 00

The earnings of the Chicago and Alton Railroad for the 1st week of April, 1863, were:

Passengers	$10,358 22
Freight	16,851 78
Sundries	974 33
Total	$28,184 33
Same week last year	17,784 27
Increase	$10,400 06

The earnings of the Milwaukee and Prairie du Chien Railroad for the 1st week of April, 1863, were $18,358 20
Same week, 1862 8,850 33
Decrease $9,507 87

The earnings of the Toledo and Wabash Railroad Company for the 1st week of April, 1863, were $22,733 92
Same week, 1862 17,429 43
Increase $5,304 49

The earnings of the Michigan Central Railroad for the 1st week of April, 1863, were $47,841 00
Same week, 1862 32,293 00
Increase $15,548 00

The earnings of the Michigan Southern Railroad for the 1st week of April, 1863, were $54,117 00
Same week, 1862 39,032 00
Increase $15,085 00

The earnings of the Chicago and Rock Island Railroad for the 1st week of April, 1863, were $30,881 00
Same week, 1862 17,185 00
Increase $13,607 00

Delaware, Lackawanna and Western Railroad Co.

REPORT FOR 1862.

The President and Managers respectfully report, that the net earnings of the Company for the year ending 31st December, 1862, after deducting interest and expenses of all kinds, amounted to $753,463 07; out of which was paid, (in cash,) June 30th, six per cent., and December 31st, four per cent., on the capital stock outstanding at those dates respectively, the remainder being added to "income account," making the balance of that account on 31st December, $681,667 38.

The quantity of coal sold in 1862, was 1,197,424.12 net tons; of which 1,093,335.07 tons were sent to market during the year, the difference being taken from stock previously on hand.

The traffic of the Company suffered interruption from a serious flood, in June, and strikes at subsequent dates. The opening of the tunnel on the Warren Railroad, for the passage of trains, took place in September last.

At the close of the year, the Company's property is in the usual excellent order.

New York, December 31, 1862.

C. R. ROBERT, *President.*

Managers—Drake Mills, John J. Phelps, William E. Dodge, Moses Taylor, George Bulkley, John I. Blair, Henry Young, Charles H. Marshall, Samuel L. Mitchill, Rufus R. Graves, Lowell Holbrook, Simeon B. Chittenden, Samuel Wetmore, David Thompson.

Great Russian Railway.

We are indebted to the *London Railway Times* for the following abstract of the Report of the Council of Administration of the Great Russian Railway:

The new statutes sanctioned by an imperia ukase, dated Nov. 3, 1861, authorised the company to dispense with the execution of the proposed lines from Moscow to Theodosia and Orel to Libau. The passage through Moscow, which, according to the first plans proposed, was to serve as a common trunk to the Theodosia and Nijni lines, had also been separated from the network conceded, subject to the condition that the company is to be empowered to establish, within a period of three years, a junction between its Nijni line and the State system known as the Nicholas. In consequence of these modifications in the original concession, the undertaking has been reduced to the line from St. Petersburg to Warsaw, with its branch to the Prussian frontier, and the line from Moscow to Nijni-Novgorod, comprising altogether a length of 1,010 miles.

The line from St. Petersburg to Warsaw is 653 miles in length, and was divided into three parts during the period of construction—viz., from St. Petersburg to Dunaburg, 312 miles; from Dunaburg to Mergagery, 145 miles; and from Mergagery to Warsaw, 196 miles. At the moment when the works of the first part were terminated on a length of 310¾ miles, it appeared necessary to confide to a special service the important operations which remained to be completed on the last 1¼ miles comprising the passage of the Dwina and the fortress of Dunaburg. Towards the end of 1860 the first part of the Warsaw line was opened for traffic, but, as usually happens, works of final adjustment and completion had to be continued during 1861. The great station of the company at St. Petersburg has been considerably increased in size in order to enable it to cope with the extent of the traffic anticipated. Some idea may be formed of the magnitude of this terminus from the fact that it is proposed to lay 22 miles of rails in and about it, and that 17 miles have been actually laid. The establishment of these lines has required the laying of 100 switches, 31 turntables of 16 feet and 23 feet in diameter, and one great table 45 feet in diameter for a shed for twelve locomotives. The laying of the remaining five miles of rails contemplated is adjourned for the present, but will be resumed as the growth of traffic calls for an extension of accommodation.

The principal building for the accommodation of passengers was opened for service in April 1860; but various supplementary works were executed in 1861 and 1862, and last year the glass roof was removed for one of iron plates, the maintenance of it having been found too costly, other arrangements being made for securing a due supply of light, &c. The goods service of the station will comprise a succession of quays and sheds, each forming two groups of equal importance, and intended, one for the arrival and the other for the departure of goods. Confining itself, however, to the exigencies of the actual traffic at present existing, the administration has constructed at present only two sheds, one for forwarding and one for receiving goods, and these were opened for business in 1861. The ulterior arrangements contemplated will be proceeded with in proportion as the wants of the service develop themselves. Works for repairing plant, sheds for engines, storehouses, &c., have been erected on the right of the principal lines, and have been very completely and carefully fitted up. As regards the secondary stations, sidings have been laid, and goods warehouses, &c., completed in 1861 and 1862 at Mchinskaia, Louga, Pskow, &c.; and a new station has been completed at Suida, at about the thirtieth mile. The Divenskaia station is now provided with a reservoir for supplying engines with water, and a shed for six locomotives, with lodgings for the men employed. At Pskow a shelter for twenty locomotives, with repairing shops, lodgings, &c., have been completed, but the necessary tools have only recently been made available for service. A gas producing apparatus has also been got to work at the Pskow station, similar to the works established at St. Petersburg, Gatchina, and Louga.

The important earthworks, buildings, &c., arising out of the fortress of Dunaburg, as well as those connected with the junction to be effected with the Riga and Dunaburg line, and the very considerable operations arising out of the station of Dunaburg itself, induced the council to create a special division of inspection at that point. The earthworks prescribed by the military authorities under the fortress of Dunaburg have been partly executed, but long negotiations have been pending with the Government with reference to the execution, at its expense, of a portion of the works remaining to be carried out. A rotunda was completed towards the close of 1862, but the construction of definitive buildings for the accommodation of passengers has been adjourned with the consent of the State, which has recognized the present provisional arrangements as sufficient to meet actual wants. A great bridge over the Dwina was completed and opened for traffic March 16, 1862, before the breaking up of the ice. Special devices for enabling the piers to withstand the shock of the broken ice could not be completed before the close of the summer, but the traffic has not been interrupted. Several other bridges have had to be executed in the neighborhood of Dunaburg, two over military ditches, street structures in the old faubourg of Dunaburg, one in connection with the diversion of the imperial road, and another securing a passage for the Riga and Dunaburg line, with which a junction was effected in April 1862.

The works of the second division from Dunaburg to Mergagery were pushed forward in 1861 and 1862 with unequal activity, between Dunaburg and Landwarow on the one hand and Landwarow and Mergagery on the other. The first section forms part of the direct communication with the Prussian frontier, and was therefore carried through with all possible speed; but the second was not hurried on so much, as it could only be profitably worked when the third division from Mergagery to Warsaw was opened for traffic. The earthworks from Dunaburg to Landwarow were definitively completed in 1861, and a tunnel at Ponary was also terminated. Several rather serious viaducts, bridges, &c., occur on this division; and among them may be noticed one in the plain of the Dwina for the discharge of flood waters; another over the river Lawkessa, another over the Vilia, another over the Vileika, and another over the Vakka. All these were more or less difficult and delicate undertakings, but their construction was carried out with much success. In 1860 one continuous line had been laid from the shores of the Dwina as far as the Ponary tunnel, and this was continued and terminated throughout the section Dec. 18, 1861, when the passage of the Vakka was effected. The terminal lines at the various stations have been carefully developed and a second line has been established between Vilna and Landwarow, in order to facilitate the movement of trains between those two points, which are important in connection with the working arrangements, the first for centralising the management, and the second as being the bifurcation of the branch towards the Prussian frontier. The station buildings on the section were completed in 1861-'62, and comprise at Vilna a shed of masonry for twelve engines, a second of about the same dimensions, a building for workshops, &c. Other sheds for engines, workshops, &c., are provided on a smaller scale at Sventsiany, Landwarow, &c. The line from Landwarow to Mergagery was easy of execution, and comprised only one important bridge, that over the Meretchanka; the section has three stations, and various arrangements for facilitating the working are in gradual course of development.

On the third division of the great St. Petersburg and Warsaw line—that from Mergagery to Warsaw—the works were not brought to a close until 1862 had well advanced. The history of this part of the undertaking in 1861-'62 is one continued narration of successful struggles with the difficulties of construction. When we state that the division comprises 27 bridges in masonry, 13 metallic bridges with abutments in masonry, 8 viaducts, and a host of smaller works of art, it will be seen that these struggles were some of them of no ordinary kind. All the metallic bridges were terminated in May 1862, MM. Gouin and Co., of Paris, having thus creditably fulfilled their contracts two months in advance of the periods prescribed. In the course of the 196 miles which the division comprises there are fourteen stations—viz., a first-class structure at Warsaw, and others at Lapy, Porocze, Grodno, &c. Several of these besides Warsaw comprise sheds for engines, apparatus for supplying water, &c.; thus at Warsaw and Porocze shelter is provided for six engines each, at Lapy for twelve, and at Sokolka, Czyzew, and Lochow for four each, the management not appearing to mass its locomotives so much together as is ordinarily the case on English systems.

A branch line constructed from Vilna to the Prussian frontier is about 101 miles in length, and leaves the main St. Petersburg and Warsaw line at the Landwarow station. It may be divided naturally into two sections of about the same length, the first from Landwarow to the Niemen—the fatal Rubicon to Napoleon I. in his great invasion—and the second from the Niemen to the Prussian frontier. Pressed urgently forward by the representations of the Prussian Government, the administration hastened on as much as possible the execution of the section from the Niemen to the frontier; and although it was only in February 1859 that it was authorized to undertake the works, such efforts were made that two years later the section was opened for the circulation of passengers and goods upon it. The works of the first section from Landwarow to the Niemen were rather moderated than actively pressed forward in the first instance, in order that the contractors might concentrate their activity on the two principal works, the Kowno tunnel and the passage of the Niemen. These received a vigorous impulse in 1861, and the Kowno tunnel, which is of very considerable length, was completed Nov. 18, of that year, and has since stood the test of severe weather and the shaking of the engines in a satisfactory manner. The great bridge over the Niemen comprises four principal spans and reposes on tubular piers each 8½ feet in diameter, sunk in the bed of the river by means of atmospheric apparatus, so as to reach an incompressible and reliable soil. The first engine passed over the bridge Feb. 4, 1862, and severe tests to which it was subjected on the following day indicated its perfect stability. The number of stations between Landwarow and the Niemen is four—viz., at Kowno, Zosly, Evie, and Proweniszki; the first comprising accommodation for fifteen engines, and

all of them fitted up with more or less completeness. The second section, from the Niemen to the Prussian frontier was opened for traffic April 11, 1861, but the ballasting, station and other buildings, &c., were then in a very incomplete state, and various works had to be carried out in 1861 and last year to develop a full efficiency. Thanks to the efforts displayed, the works on the main line from St. Petersburg to Warsaw, between the Dwina and the Prussian frontier, were brought into such a state of advancement that in February 1862, the administration was enabled to organize a service of three preparatory trains weekly for the carriage of passengers and goods between the left bank of the Dwina and the frontier *via* Vilna and Kowno.

Vermont and Massachusetts Railroad.

At a special meeting of the stockholders of this company, it was voted to ratify and agreement made by the directors with the Commonwealth of Massachusetts, dated the 20th of February, 1863, in regard to the Troy and Greenfield Railroad and Hoosac Tunnel—to authorize the directors to execute any other agreements which may by them be thought necessary or proper to carry out the provisions of said agreement, or make any other arrangements or contracts which in their judgment may be expedient in relation thereto, and to authorize the directors to extend the time of the payment of the bonds of the company and the mortgage security therefor if they should deem it expedient so to do.

Grand Trunk First Preference Bonds.

The bonds are now stamped under the Arrangements' Act, and the overdue coupons are detached and interest debenture certificates issued for the amount of the latter. These interest debentures are represented by neat certificates, expressing on their face the nature of the security, that they will not begin to bear dividend until after December 31st, 1864, and for the years 1865 and 1866, not more than 3 per cent. per annum; that on and after Jan. 1st, 1867, they may be exchanged for first preference debentures, "having all the rights and privileges of the present existing first preference debenture capital."

First preference bonds may now be converted into first preference stock, by which means the eventual 6 per cent. per annum interest is rendered perpetual, and a right of voting given. Some bondholders have already availed themselves of this option of stock conversion, and within the five years, no doubt, all will, a perpetual 6 per cent. being in fact much more valuable than 6 per cent. bonds, payable off at par. For permanent holding the stock is decidedly better than the bond; for present speculative purposes, we dare say it is not.

Practically there is no difference in the legal rights of first preference bonds, and first preference stock, but the following additional rights and advantages are acquired by the first preference stock.

1st. The same privileges of voting and otherwise as the holders of shares in the original stock of the Company (See sec. 10, of the Arrangements' Act.)

2d. The *perpetuation* of the 6 per cent. per annum interest. (See sec. 11 of the Act.) This, hereafter, will doubtless make the first preference stock worth a considerable premium, while the bonds (if any remain after the 5 years within which they may be converted) being payable off at par, cannot be worth a premium, or anything worth speaking about.

3d. Being *registered*, instead of *to bearer*, most investors objecting to holding property, or much of it, "To Bearer."

We do not know whether the interest debentures can yet be converted into stock of the same class. —*Herapath.*

FINK'S PATENT IRON RAILROAD BRIDGE

THE undersigned is prepared to manufacture and build in any part of the United States and Canada, at reasonable terms, **FINK'S PATENT IRON BRIDGE** in spans from 20 to 300 feet. The same is favorably known, well tested and already extensively introduced, is stronger and more economical than any other Bridge now in use, requires no repairs, and no adjustment, but is perfectly adjustable. For plans and particulars apply to

An Invention of Rare Merit.

LONG WANTED, AND FOUND AT LAST!

A Kerosene Lamp Chimney, Easily Cleaned

AND WHICH

WILL NOT CRACK OR BREAK

FROM SUDDEN CHANGES OF

TEMPERATURE.

THE CHIMNEY in common use breaks from unequal expansion and contraction, caused by the upper portion becoming much more highly heated than the lower portion. This constant liability of the Chimney to be broken by being suddenly cooled or "over-heated," is entirely removed by a unique and beautiful invention, BROWN'S METAL TOP LAMP CHIMNEY, which, being made in accordance with the simple law of expansion and contraction, is found to be almost "fire-proof," as far as heating by the flame of the lamp is concerned.

The clear, positive superiorities of the NEW LAMP CHIMNEY over the old style, are—

1. It will not crack or break from sudden changes of temperature, or "over-heating."

2. The top can be instantly removed, and the glass wiped perfectly clean in a moment WITHOUT WETTING.

3. It is shorter than the common chimney, therefore less liable to accidents and more convenient for carrying about the house, it is of elegant proportions and a decided ornament to the lamp, which will be found to burn with a clear, steady and beautiful light.

It is really the ideal of perfection in a lamp chimney, and after using one for an evening you will wonder that you could tolerate the old expensive style.

A "BROWN'S METAL TOP LAMP CHIMNEY," **IS WARRANTED, with ordinary care, to last just as long as the lamp on which it is used.**

Price (with a small SHADE for common size,) Zinc-top, 25 cents, Brass, 31 cents, Silver-Plated, 50 cents.

Dealers will be furnished, per Express, with a SAMPLE BOX containing one-half dozen Chimneys, assorted styles and sizes, with circulars, colored show cards, Price list, etc., on receipt of $1.25.

BROWN'S

Metal Top Lamp Chimneys

ARE MANUFACTURED ONLY BY THE

NEW LAMP CHIMNEY MANUFACTURING COMPANY.

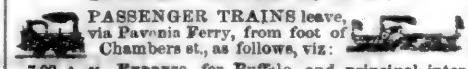
AMES IRON WORKS,

OSWEGO, N. Y.,

SOLE AND EXCLUSIVE OWNERS AND MANUFACTURERS, UNDER PAYE'S PATENT.



An imperfect sketch of our smallest size Machine.

PAYE'S PATENT FORGE HAMMER. A HAMMER ADAPTED TO BOTH HEAVY AND LIGHT FORGINGS, with an adjustable stroke of from one inch to three feet. This hammer is adapted to both heavy and light forgings; the force of the blow being entirely at the will of the operator, and for all forgings under six inches, either round or square, is the best hammer now in use, and requires but one-half the power used by every other hammer to do the same work. For an engraving and description of this hammer, see page 1, Vol. V (new series) of the SCIENTIFIC AMERICAN; some valuable improvements have, however, been since made. All communications should be addressed to H. M. Ames, Box 422, New York, or Ames Iron Works, Oswego, N. Y.

These hammers may be seen in operation at the Allaire, Neptune, Secor, Delamater, Fletcher & Harrison, Duncan & Cramnton, Anderson & Mclaren, Duhurst & Emerson, Charles T. Porter, all in New York City; Joseph Colwell, Jersey City; Wm. White, Newark, N. J.; Providence (R. I.) Tool Co.; Whiting & Wilcox, Kaigh's Point, Phila.; Mallory & Cottrell, Mystic, Conn.; J. Dillion, Rondout; James Horner & Co., Sing Sing; Henry Esler & Co., Brooklyn; James B. Eads, St. Louis, Mo.; Central Railroad Shop, Albany; Burlington, Quincy & Chicago Railroad Shop, Ames Iron Works, Oswego; M. Guinness, Albany; Sweet Brothers, Syracuse.

ERIE RAILWAY.

FOX LATHES.

F. W. BACON & CO.,

No. 23 PLATT, corner of GOLD ST.,

NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & CO., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT RE-OILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the loading case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.

Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past six years with uniform success, they confidently offer their services to those requiring such aid.

VENTILATION.

THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS**, etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

Address **HENRY RUTTAN,**
Coburg, Canada.

New York, Saturday, April 25, 1863.

New Railroad from Erie to Cleveland.

The extension of the broad gauge of the Atlantic and Great Western to Cleveland, thus in fact continuing the Erie to that point, necessarily brings out views, combinations and arrangements in the West, which are expressing and developing themselves in new enterprises. It so happens in this instance, that the controling interest in the company which operates the line of railway between Erie (Pa.) and Cleveland (Ohio,) the present track between those cities, is at the same time the chief promoter of the broad gauge connection now in contemplation, viz., a track from Ashtabula to Jamestown, Pa., a distance of thirty-five miles to connect with the Atlantic and Great Western, and an extra rail to be laid from Ashtabula to Cleveland. It is therefore supposed these two interests in combination might affect the business at present enjoyed by the shore line between Erie and Cleveland, and divert both freight and passengers from its natural routes along easy grades, to the southward over the high grades on the Delaware and Susquehanna. It is evident this diversion, if it were made, would be injurious to the interests of the Central, and seriously affect both the passenger and traffic business thus turned off at Cleveland to the broad gauge track. As then a strong competition might arise, and with competition unfavorable results be experienced by the diversion of this business from its present route, it has become an act of prudence on the part of Eastern interests therefore to guard against such a contingency. Every railway East or West with the uniform standard gauge is now compelled to consider what it might lose by a derangement of the present system of continuous transportation without change of cars and engines and the interruption henceforth at Cleveland by the new broad gauge intervention.

It was therefore to be expected some counter movement should take place to preserve the present continuity between Erie and Cleveland, free from the control of another and different interest, and a meeting was recently held at Buffalo, attended especially by the friends and managers of the Buffalo and State line road, and the Erie and North East road, at which it was determined to build a new independent line direct from Erie to Cleveland, parallel to the present one. The sum of seven hundred thousand dollars was subscribed at once to the stock of the new company, which is called the Lake Shore Railroad, and this is about one-third of the amount necessary to carry the project through. The balance will shortly be at the disposition of the public.

The inducements to subscribe to this stock appear to be very considerable. The Cleveland, Painesville and Ashtabula road, by which name the route between Erie and Cleveland is known, with a share capital of three millions, earns in gross receipts one million two hundred and fifty thousand dollars per annum, out of which was declared in 1861 a dividend of ten per cent. in cash, ten per cent. in bonds with a large surplus in cash remaining, the shares being held in the market at 200. Though we have not been favored with the report of 1862, we presume the results were the same as that of the preceding year. It is therefore very evident if the railway interests west of Cleveland and east of Erie control the new road, the business in both directions must pass over it, and so far as they can thus control it, it must take the new continuous route, and thus a transfer of the traffic will carry with it the profits and value which now attach to the Cleveland, Painesville and Ashtabula. If this view is correct, and it is entertained by those who are engaged in the new enterprise, as well as by others familiar with the subject, a very rare opportunity is offered to capitalists to come in and embrace the advantages which appear to be immediate and certain.

We of course are in favor of every thing in the shape of a railway, broad gauge or narrow. We wish success to every such project. We have seen since we commenced our thirty years life of Railway Journalism, results so vast and magnificent as to have surpassed the expectations of the greatest enthusiasts. States and cities have grown up under our eye. The work of centuries abroad, is here but the triumph of days. In this case, the only question to be asked is will the capital invested in it make a suitable return. By the fair contest of companies the public are always gainers. We presume there is enough for all the lines which are now operated or projected along the lake shore, or diverging southward from that base. At any rate, as between the present route between Erie and Cleveland, it may be safely predicated of the new enterprise, that with the powerful interests which will be exerted in its behalf, it must become one of the most profitable links in the great route between Buffalo and Chicago.

Massachusetts--Property, Taxes, etc.

The Hon. Oliver Warner, Secretary of State, has transmitted to the Legislature a document conveying information as to the aggregates of the polls, property, taxes, &c., as assessed May 1, 1862, compiled so as to give these several statistics from each of the cities and towns in the Commonwealth. The grand totals are as follows: polls, 276,443; tax on polls, $564,796 17; value of personal estate, $315,311,213; value of real estate, $548,669,113; total tax for State, town and county purposes, including highway taxes, $8,605,511 19; total valuation May, 1862, $858,980,326; dwelling houses, 178,450; horses, 87,478; cows, 151,756; sheep, 137,478; number of acres of land taxed, 4,397,368.

Boston and Worcester Railroad.

The gross income from operations of this road for the years ending November 30, 1861 and 1862, have been as follows:

	1861.	1862.
From passengers	$472,729 41	$967,718 75
" freight	414,683 98	
" rents	15,597 70	18,284 34
" mails	16,838 12	14,910 68
" interest	9,083 58	5,216 05
Total	$928,932 79	$1,006,129 82
Expenses, viz:		
Repairs of road	$73,157 35	$78,051 73
" engines	35,903 74	31,547 28
" cars	30,393 67	37,749 08
" buildings	13,198 69	10,459 74
" fuel	58,573 24	50,769 13
Oil and waste	7,885 70	6,617 12
Passenger expenses	68,455 53	73,412 37
Freight expenses	101,610 71	111,965 18
Taxes and insurance	12,013 70	13,554 33
Renewals of iron	31,146 85	22,222 53
Gratuities & damages	1,572 33	3,072 69
Rent of Agricult'l Br.	11,895 10	12,149 95
Salaries of officers, etc.	27,387 30	29,859 77
Western R. R. subsidy	12,000 00	6,000 00
Reducing curve	3,373 69	.....
Credited to depreciat'n	31,870 80	.....
Pass. house, Boston	.....	15,342 99
Government tax	.....	4,051 83
Total	$520,338 40	$515,825 72
Net income	$408,594 39	$490,304 10
Deduct dividends, Jan. and July 8 per cent	$160,000 00	
Government tax on January dividend	5,567 01	
		365,567 01
Surplus from income undivided		$124,737 09

The total expenses for working the road were $478,280 95—being 47.5 per cent of income. The total expenditures were 51.2 per cent of income.

Compared with the previous year, the gross income shows an increase of $77,197 03; with a decrease in expenditures of $4,512 68—making the increase in net income $81,709 71.

The road, road-bed, bridges and rolling stock are in excellent condition. The company have put down during the year 1,003 tons of new iron; also 726 tons repaired rails. 41,000 chestnut sleepers have been used, and the company have on hand for future use, 58 tons new rails, 1,149 tons second hand rails, and 49,937 new sleepers, 5,800 cords of wood and 2,936 tons of coal.

The number of miles run by passenger trains has been 365,958; by freight trains, 193,249; by other trains, 4,910—total miles run 564,117, an increase over the previous year of 36,597. The number of passengers carried in the cars has been 1,506,196; do., carried one mile, 24,542,655; do., carried one mile to and from other roads, 8,591,250. The number of tons of merchandise carried in the cars was 382,494; do., carried one mile, 14,876,747; do., carried one mile to and from other roads, 11,808,677. Estimated weight, in tons, of passenger cars, not including passengers, hauled one mile, 16,312,050; do., freight cars, not including freight, 21,456,442. A comparison of the past with the previous year shows that there has been an increase in the mileage of freight trains of 19,984 miles; and in passenger trains of 19,613. Increase of freight carried, 87,320 tons. ncrease of passengers carried, 29,802. Of the increase of income, as compared with last year, $30,580 32 was on local, and $46,616 71 on joint account.

Income, Expenses, Dividends, also Construction Account yearly since the opening of the road in 1834.

1862...	1,006,130	515,826	360,000	8	4,500,000

The construction account now stands as follows:

Main road	$3,708,811 05
Branches	353,672 63
Equipment—engines and cars	437,416 32
Total	$4,500,000 00

The amount of assets or property held by the company, in addition to the cost of the road, exclusive of Grand Junction bonds, which are of uncertain value, is $735,584 30; and the reserved income, $530,716 45. The report says:

The year has been one of great success to the Corporation. Much credit is due to the Superintendent, to the heads of departments, and the men under their charge, for their untiring efforts in the discharge of their various duties. The great advance in prices threatens to bear heavily on the Corporation as well as its employees, and justice seems to require that in those cases where the burden is most felt their compensation should be increased to a limited extent, although our expenses also will be thus somewhat increased.

Since our last Report, the Supreme Court have decided, in the action brought against the Corporation by the Trustees of the first mortgage on the real estate at East Boston, that the lien of their mortgage is prior to that of our lease of a portion of the premises. The action is still pending on their claim for mesne profits, and ours for improvements.

In order to prevent a possible forfeiture of the whole property by foreclosure, we have filed a bill to redeem the mortgaged premises, and to obtain a further determination of the rights of the parties. This bill has been referred to a Master in Chancery to report the amount to be paid for redemption, &c. In the mean time, some negotiation has taken place, with parties largely interested in the first mortgage, in regard to the formation of a new Company, comprising various interests, or a lease of the whole estate to this Corporation. It is claimed that an arrangement might be made, in one of these modes, which would save a large part of our investment, and ultimately realize the advantages hoped by our predecessors, who engaged in the undertaking, from a connection with deep water; but the present Board have not felt disposed to act unless there should be a clear prospect of success, without much additional hazard, and would be glad to have further instruction and authority from the Stockholders.

We have received from the Old Colony and Fall River Railroad $28,000 as rent for the use of our land, occupied by that Corporation, up to January 1, 1862, and $100 monthly since that date; and only await, for a final settlement of the case, the signing of an agreement prepared for that purpose.

The equipment of the road consists of 30 first class locomotive; 273 merchandize cars; 50 passenger cars, also 44.236ths of 22 running between Boston and New York *via* Springfield, and 45.-107ths of 5 running between Boston and New London *via* Norwich.

BALANCE SHEET, NOV. 30, 1862.

Construction	$4,500,000	00
Fuel and materials for repairs	144,861	52
Grand Junction bonds	100,000	00
Balances due from other roads and individuals	101,963	43
Land not in construction account	100,028	28
Notes receivable	33,865	15
Bills receivable for uncollected freight	86,377	95
Notes on collaterals	224,324	63
Cash	44,163	39
	$5,335,584	30
Assessments for capital	$4,500,000	00
Balance due to other roads and individuals	82,249	67
Unclaimed dividends	11,404	00
Depreciation of engines, cars and buildings	25,647	17
Reserved income	530,716	45
Dividend payable Jan. 1, 1863	185,567	01
	$5,335,584	30

President—GINERY TWITCHELL.
Superintendent—E. B. PHILLIPS.
Treasurer—HORACE WILLIAMS.

Railroad Decision in Illinois.

A case has just been concluded in the Knox County Circuit Court, of much importance, both as to the amount in question—it being some three millions of dollars—and as to the principles of law involved.

The suit was brought by Nathaniel Thayer and others, as trustees under the second mortgage n the Northern Cross Railroad, leading from Quincy to Galesburg, against the Northern Cross, now the Quincy and Chicago Railroad Company, the Quincy and Toledo Railroad Company, and others, to foreclose that mortgage.

The questions involved, among others, were 1. Had the Northern Cross Railroad Company, under their charter, the power to mortgage that part of the road above mentioned, so that the purchaser at the sale under the foreclosure of said mortgage would take the property discharged of any obligation to construct, maintain or operate the other portion of the same, originally embraced in its charter, and extending from Camp Point, a station on the Quincy and Chicago Branch to the Illinois River. 2. Had the trustees in said second mortgage the right to make a lease of the road, or that part lying between Camp Point and Quincy, to the Quincy and Toledo Company, which should extend beyond the foreclosure, and remain an incumbrance on the mortgaged property in the hands of the purchaser after the sale.

The case was ably argued on the part of the Quincy and Toledo Company, by Hon. O. C. Skinner and Jackson Grimshaw, of Quincy, and on the part of the trustees and bondholders, by James F. Joy, Esq., of Detroit, and James M. Walker, of the firm of Walker & Dexter, of Chicago.

The case was tried before the Hon. Chas. B. Lawrence, the presiding judge of the Knox Circuit,

who, in giving his opinion, exhibited that great learning and marked ability for which he has long been distinguished, held that the late Northern Cross Company had the right to mortgage that part of the road covered by the mortgage, and that the purchaser under such mortgage of that part would be under no obligations to maintain or operate any part of the road not embraced in the mortgage; and that the trustees, under such mortgage, had no authority to make a contract with, or lease to, the Toledo Company, which should extend beyond the foreclosure, or which should, in any manner, incumber or charge the property in the hands of the purchaser; and a decree was therefore made in accordance with the prayer of the bill, sending the mortgaged road and property to sale, discharged of all such liens or incumbrances.

Western (Mass.) Railroad.

The receipts from operations of this road for the years ending November 30, 1861 and 1862, have been as follows:

	1861.	1862.
From passengers	$613,365 08	$634,656 44
" freight	1,164,320 23	1,351,862 20
" mails, etc.	116,882 65	109,403 86
Total	$1,894,567 96	$2,095,922 50
Expenses, viz:		
Repairs of roadway	$244,617 16	$253,397 40
" engines	82,075 69	79,201 41
" cars	125,914 44	170,245 85
" buildings, etc.	84,878 48	59,317 61
Transportation exp.	533,637 50	529,220 80
General expenses	20,447 90	19,975 13
Total	$1,081,571 17	$1,111,358 20
Net income	$812,996 79	$984,564 30

Disbursements in 1862—		
Interest on State loans and exchanges	$364,444 11	
One per cent. to sinking funds	50,000 00	
Eight per cent. dividends	412,000 00	
Excise tax on dividends	6,371 13	
Loss on Pittsfield and North Adams R. R.	3,323 34	
		836,138 58
Surplus carried to contingent fund		$148,425 72
Add balance of do., Nov. 30, 1861		404,748 88
Total contingent fund Nov. 30, 1862		$553,147 60

Compared with the previous year, the gross receipts show an increase of $201,354 54; with an increase in expenses of only $29,787 03—making the increase in net income $171,567 51.

The earnings of the Pittsfield and North Adams railroad were $43,142,14; and the expenses, $19,465 48—leaving net earnings, $23,676 66. Two dividends of 3 per cent. each, amounting to $27,000, were paid—the deficiency, $3,323 34, being supplied by the Western railroad company.

The whole property of the corporation is in excellent condition; the trains have been run with great regularity, and almost entirely free from accident.

A little more than eight miles of second track have been laid the past season, leaving now less than 40 miles to complete the whole line between Worcester and Albany.

The equipment of the road consists of 18 passenger and 55 freight locomotives; 37 first class, and 8 second class passenger cars, 9 baggage, 838 box, 261 platform, 80 gravel and 46 hand cars. Also, 54-284ths of 21 passenger and 9 baggage cars, of the New York and Boston Express Line.

The number of miles run by locomotives with passenger trains was 862,981; with freight trains, 852,350; with other trains, 41,870—total miles run, 1,257,201, an increase over the previous year of 23,183.

The number of passengers carried was 558,047; of which 35,497 were through, and 522,550 way passengers. Of the through passengers, 32,634 were 1st class, and 2,863 2d class. Of the way passengers 512,005 were 1st class, and 10,545 2d class. The whole number of 1st class passengers was 544,639; 2d class 13,408. The passenger traffic shows a falling off of 5,093.

The number of tons of merchandise moved was 587,504, of which 428,198 was carried east, and 159,306, west. The through tonnage westward amounted to 22,785; do., eastward, 113,040. All other tonnage westward, 136,421; do., eastward, 315,158. Equivalent number of tons carried one mile, 51,994,206; equal to 333,296 tons carried over the whole road. The increase in merchandize traffic over 1861 was 79,325 tons.

An aggregate of 75,773,892 passengers or tons of freight carried one mile in 1862, against 70,933,443 in 1861.

The cost of transportation for each passenger and each ton of freight one mile has been 1.467 cents against 1.525 cents in 1861; or, assuming the cost of transporting each ton of freight to equal the cost of two passengers the same distance, we find the cost to be .700 cents per passenger, and 1.400 cents per ton for freight, against .910 cents per passenger and 1.820 cents per ton for freight per mile in 1861.

The cost of the Western, Albany and West Stockbridge, and Hudson and Boston Railroads, to November 30, 1862, has been as follows:

Western Railroad		$7,537,565 24
Equipment		1,095,712 97
Albany and West Stockbridge R. R.		2,388,359 22
Hudson and Boston Railroad		183,838 98
West Stockbridge R. R. Stock		13,000 00
Total		$11,218,476 41

The means provided for the construction and equipment of the same has been as follows:

Capital stock	$5,150,000 00	
Sterling bonds	4,319,520 00	
Albany City bonds	1,000,000 00	
Total means	$10,469,520 00	
Amount paid sinking funds	459,578 62	
	$10,009,941 38	
Dollar bonds and Hudson loan	1,100,000 00	
		11,109,941 38
Balance expended more than realized from construction funds		$108,535 03

It will be seen by reference to the annexed balance sheet that the present total value of the sinking fund is $2,714,356 56; of this sum the above amount of $459,578 62 was derived from construction funds, and from the proceeds of shares, leaving as actual profits $2,254,777 94—equal to $43.78 to each share of stock. Add to this the undivided earnings or contingent fund, $553,174 60, and it will be seen that the proportion of profits undivided to each share of stock on the 30th of November last was about $54.52.

The following statement will show the receipts and expenses of the Western and Albany and West Stockbridge Railroads from 1839 to 1862, inclusive:

	Total earnings.	Total expenses.	Net. receipts.
1839, 3 mos.	$17,609 15	$14,380 64	$3,228 51
1840	112,347 39	62,071 72	50.275 67
1841	182,308 99	132,501 45	49,807 54
1842	512,688 28	266,619 30	246,068 98
1843	578,882 51	203,973 06	269,909 45
1844	753,752 72	314,074 20	439,678 52
1845	813,480 15	370,621 25	442,858 90
1846, 11 mos.	878,417 89	412,679 80	465,738 09
1847	1,325,336 06	676,689 75	648,646 31
1848	1,332,068 29	652,357 11	679,711 18
1849	1,343,810 57	588,323 58	755,487 99
1850	1,366,252 47	607,549 36	761,964 32
1851	1,353,894 63	597,756 20	756,138 43
1852	1,389,373 09	656,687 17	683,194 92
1853	1,525,223 02	778,487 92	746,736 00
1854	1,763,944 26	1,045,241 19	718,703 07
1855	1,858,861 75	1,236,659 74	622,202 01
1856	2,115,820 05	1,228,219 46	887,600 59
1857	1,910,342 48	1,084,118 55	826,223 93
1858	1,700,293 60	890,930 40	809,363 20
1859	1,767,068 13	936,920 12	830,148 01
1860	1,881,350 72	993,096 30	888,254 42
1861	1,894,567 06	1,081,571 17	812,996 79
1862	2,095,922 50	1,111,358 20	984,564 30

Balance Sheet, Nov. 30, 1862.

The Marquette Railroad.

From a communication of Lewis H. Morgan, a director of the Bay du Noquet and Marquette Railroad, in the *Western Railroad Gazette* of April 11, written in answer to that portion of Wm. B. Ogden's recent address, before the Chicago Board of Trade, in which Mr. O. made allegations of "exhorbitant" charges against the Marquette road, we learn that:

"The Bay du Noquet and Marquette Railroad was commenced in 1853, and opened to the Iron Mines in 1858. The first year it carried down about 50,000 tons of ore; in 1859, 100,000; in 1860, 150,000; in 1861, 50,000, and in 1862, 150,000 tons. This railroad opened the iron district, and was the means of introducing this ore largely into the markets of the country. Last year it was extended south from the mines to the Esconaug river, which brings its present terminus within fifty miles of the Bay. It is the intention of the company to finish it to the Bay within three years from the present time, and sooner if circumstances shall demand it.

The distance from Marquette to the Jackson mine is a little short of 14 miles; to the Cleveland mine a little short of 16 miles; and to the Lake Superior mine 16¼ miles. These are the only mines worked in the country. The rates of freight last season on iron ore were 90 cents, 97 cents,

and 100 cents per ton for these mines, respectively, to Marquette. On all amounts above 40,000 tons furnished by either mine, the rates were reduced to 70, 75 and 77½ cents per ton, respectively. The last are called the 'Ogden rates,'—for this same Ogden established them himself in 1856. The difference on the first 40,000 tons does not represent the actual depreciation of the currency last year. The cars are drawn up empty, the grade being 860 feet in 16¼ miles, an average of thirty miles for each ton of ore, at an average freight of 95 cents per ton."

Grand Trunk Railway.

From the following report it appears that the traffic and other revenue receipts of the Grand Trunk Railway for the half year ending December 31, 1862, were £439,361; and the working expenses, £332,563—leaving a net balance of £106,798. For the half year ending July 31, 1862, the receipts were £382,992; and the expenses, £319,556—leaving a net balance of £68,436. For the whole year the receipts were £822,358; and the expenses, £652,119—leaving a net balance of £170,234. A comparison of the earnings and expenses of the last half of 1862, with the corresponding period of the previous year is given in the annexed report of the directors:

1. The accounts of income and expenditure issued herewith show that the traffic and other revenue receipts of the company for the half year ended 31st December, 1862, amounted to £439,631. The receipts for the corresponding half year of 1861 were £419,469, and the receipts for the first half year of 1862 were £382,992—therefore the receipts of the half year now reported upon, as shown in the accounts, are £19,892 in excess of the receipts of the corresponding half year of 1861, and £56,369 in excess of those of the first half year of 1862. But to exhibit the true increase of traffic, it is necessary here to state that in the corresponding half of 1861 an amount of £8,000 was included in the traffic receipts for carriage of the company's own stores, an item which is no longer taken credit for as traffic. There was also included a special receipt of £3,000 for conveyance of troops.

2. The working and other expenses of the half year have been £332,563, as compared with £323,761 for the corresponding half year of 1861 and with £419,556 for the first half of the year 1862. But in the half year £70,256 has been expended in renewals and improvements of the road as previously proposed, as compared with £35,878 in the corresponding half of 1861, or an excess of no less than £34,378, but for which the working expenses would have shown a very considerable reduction.

3. The net balance of the half year's working, after deducting the expenses, so augmented, is £106,798, as against £95,708 for the corresponding half year of 1861 and against £63,436 for the first half year of 1862.

4. From this sum of £106,798 there has been deducted an (estimated) amount of £13,813 for postal and military moneys accruing since the 8th of August last, when the Arrangements' Act came into force. Under this act the postal and military receipts are specially devoted to the liquidation of debts due by the company on the 31st December, 1861, to creditors in Canada and England. The amount of the postal moneys is, as hereinafter stated, still under discussion, and the sum on account of this item included in the deduction is simply taken in estimate, pending the final settlement of the whole question.

5. After deducting this amount, £92,985 is left, from which a further deduction of £7,418 has to be made for expenditure on capital account, less credits for elevator fund, sale of old materials, &c. The particulars of principal outlay on capital account thus charged to revenue are specially set forth in abstract L (page 24), and the details of the credits referred to will be found in the revenue account. The sum left is £85,567, which the directors regret to say is again reduced by a sum of £13,672, being balance of loss upon American currency received for through freight, caused by the heavy discount upon American legal tender notes as compared with gold and Canadian currency redeemable in specie. Measures have been taken to protect the company as far as possible, for the future, from this previously inevitable loss.

6. Out of the balance of £71,895 still remaining, £25,018 has been paid for rents and interest upon the British American Land, the Montreal Seminary, and the Atlantic and St. Lawrence (both American and sterling) debentures, and the balance of £45,977 has been carried to revenue account, which, having as shown in general balances in the previous half years' accounts, been overdrawn, at length shows a balance at credit of £37,985, the larger portion of which has been absorbed in paying the debts of the company for which proceedings were commenced in Canada prior to the 8th of August last and in liquidating a considerable portion of the debt owing in America not protected by the Arrangements' Act, which only operated in Canada. These American debts were in process of compromise, and would in all probability, have been settled on favorable terms had not the unexpected action of the Canadian Government in the matter of the postal arbitration destroyed confidence and produced new financial difficulties, leading some of the creditors to attach the company's property in United States territory, and thus compelling arrangements under duresse as regards those debts.

The only remaining old debt of the company in the United States is that due to the Portland Car Company (amount claimed about £25,000,) partly for new cars supplied and partly for repairs done to the company's stock. As the latter claim contains charges to which the company object, it has been resisted, and terms of compromise have been proposed with the object of getting rid of it on equitable terms. It will be observed that, under existing circumstances, the net revenue of the company has been the only means out of which to provide for claims not covered by the Arrangements' Act.

In discussing the settlement of the accounts relating to the "Three Rivers" branch with the Government of Canada and with the contractor, demands have been made which the board could not consistently assent to, desirous as they, nevertheless, were that the line should be opened, under fair arrangements, for public traffic. And the Managing Director has, without prejudice, proposed very liberal terms, which would have protected the public from inconvenience, and as these terms have been refused, the board have come to the conclusion that the whole matter should be referred to the legal advisers of the company.

7. Since the 30th June, 1860, after which date the company was compelled to suspend the payment of its debenture interest, the net profit shown in the company's accounts has been, making certain deductions for over-estimated credits, bad debts, &c., £333,339. Out of this sum the interest on the Atlantic and St. Lawrence bonds of all classes, also the interest upon the various classes of bonds issued in lieu of payment for land in Canada, and land rents and land mortgage interest due by the company, have been paid. These payments in this period and the loss on exchange have amounted to £165,904. In addition to this, a very large amount of debts of the company, mainly incurred on capital account, have been discharged, and postal revenue included in the company's accounts has been withheld, even during the worst periods of the company's financial distress, by the Canadian Government. These debts so paid and these stoppages will amount collectively to £163,854, to which must be added some current outlay on capital account paid for out of revenue, and in the past two years and a half the net revenue has been thus exceptionally absorbed. The appendices N and N 2 (pages 28—31) give an approximate statement of the revenue balances, and will also afford further detailed information on this subject.

In the current half year a settlement of the postal question and the arrangement of the remaining American debt will enable the net profit carried upon the company's undertaking to be regularly applied to its legitimate purposes. As the course adopted in reference to the postal arbitration has, as before stated, thrown fresh embarassments into the company's affairs, and has led to loss to the company by the subsequent proceedings of creditors, the fulfilment of the promises of the Canadian Government and the action of Parliament thereon must be awaited with anxiety.

8. In appendix P (page 34) will be found a copy of the memorial transmitted to the Governor General of Canada in Council, by order of the meeting of the 8th August last. Subsequently, viz., on the 30th October last, the Governor General in Council proposed by minute to continue the postal remuneration for the past at the inadequate rate arbitrarily fixed in 1858; but, in order to provide equitably for the future, to recommend parliament to pass an arbitration act, under which the postal claims of the company might be settled by referees, as in England. In appendix Q (page 36) will be found the reply of the board to the order in Council. The directors in Canada have been informed that a draught bill has already been prepared by the Government.

9. In the meantime, the passenger train service has been regulated so as fully to serve the limited amount of passenger traffic; and the postal department have been informed of the company's readiness to run any special trains required for purely postal purposes on requisition and proper payment.

10. The passenger receipts of the company, always hitherto meagre, have shown, when compared with the corresponding half year of 1861, a considerable falling off, arising partly from the embarassments in the United States and partly from the reduction, in the earlier part of the half year, of the through western passenger train service of the Grand Trunk Company, made in expectation of an early fusion with the Great Western Company and resulting for the time in considerable benefit to that company. This through service has been restored.

11. Some differences having arisen in Canada between the Grand Trunk and Great Western Companies, the board made an offer to the Great Western board in England to agree for some fixed term to refer all questions of difference between the two companies to friendly arbitration, and, although this offer was not accepted, the Great Western board expressed its desire to meet and endeavor to dispose of all such questions as they arose in the first instance.

12. The through working arrangements with the Buffalo and Lake Huron Company for interchange of traffic with New York and the Eastern States have been much improved during the half year; but traffic has been lost to the Buffalo Company for want of an adequate supply of rolling stock, and the rate of exchange has destroyed much of the profit on the traffic actually carried by this route. The directors will endeavor to preserve friendly relations and to extend interchange of traffic with all the railways connecting with the Grand Trunk. Now that the Toronto elevator is completed, enabling the transmission of grain in bulk from Sarnia, arrangements have been made for the running of propellers from Chicago and intermediate ports on Lake Michigan to Sarnia during open navigation.

13. Pending the settlement of the postal question, the directors have been in communication with creditors of the company, with especial reference to the securities held by them and the creditors, relying upon the pledge of the Canadian Government as to the Postal Arbitration Bill, have agreed to leave this question to the decision of the late select committee of bond and shareholders. Until this question is disposed of the works and requirements for an extending traffic cannot be supplied, nor can those improvements of the track which experience shows to be in every way desirable, and which mainly comprise the removal,

as soon as may be, of the hollow rails left on the main line be carried out.

14. The provisions of the "Arrangements' Act" in regard to the conversion or registration of the several classes of bonds of the company and the capitalization of the arrears of interest due thereon have been put in operation, and a notification of their readiness to carry the requirements of the act into effect having been issued by the directors at the beginning of January last, a very large portion of the bonds have already been sent in. The auditors' report is referred to in reference to the transfer of charges to the capital account.

15. The traffic of the line shows a gratifying progress; the expenses, though still very high, are reduced under many important heads; and if the Government and parliament of Canada will assist in the restoration of the credit of the concern by a simple and obvious act of common justice, better results, both to the province and to the bond and stockholders, will soon attend the working of the Grand Trunk.

16. The directors who retire by rotation are Messrs. Watkin, Chapman, Ferrier, and Potter; and the retiring auditors in Canada are Messrs. Taylor and Morland.

These gentlemen are eligible for re-election.

The bond and shareholders will also have to elect an auditor resident in England.

Notice has been received of the desire of preference bondholders to propose Mr. A. W. Young and Mr. James Caird, M.P., as candidates for seats at the board.

Bondholders and stockholders unable to attend the meeting may receive a form of proxy on application to the secretary.

EDWARD W. WATKIN, President.

Offices of the Company, 21 Old Broad street, London, E. C., March, 1863.

The True Standard of Valuation in the taking of Lands for Railroad Purposes.

VALUATION OF LANDS BY APPRAISEMENT—THE ONLY PROPER TEST IS THE OPINION OF WITNESSES AS TO ITS MARKET VALUE. EVIDENCE OF A SUM PAID FOR LAND IN THE SAME NEIGHBORHOOD IN A PARTICULAR INSTANCE, IS INADMISSABLE. DAMAGES MAY BE ALLOWED FOR INCONVENIENCE IN CROSSING A RAILROAD.

This action was brought by one Hiester against the East Pennsylvania R. R. Co.; and was an appeal by the plaintiff from an award of damages by appraisers, appointed by the court, for taking some seven acres and ninety-four perches of his land for the use of the defendant's road, and for injuries to certain crossings over the Reading Railroad, constructed for the use and accommodation of his farm. The trial was had in the Court of Common Pleas, *Berks County Penn.*, and resulted in a verdict in favor of the plaintiff for $3,000. The defendant then appealed to the Pennsylvania Supreme Court, and asked for a reversal of judgment on the ground that the Court made the following errors, viz:

1. The Court erred in admitting the following testimony of Richard Boone: "There was a sale lately of Levi Malsberger to Bushong; that was a lot of about five acres, at $300 an acre: this I was told by Bushong myself; I suppose about the same distance from the centre of Reading as the northern part of Hiester's is, I suppose that land not as good as Mr. Hiester's. Some of it—the five acres—rough. In a settlement with the Lebanon Valley Railroad, about four years ago, with Leitzinger's estate, the company paid $350 per acre. This land is farther from Reading than Leitzinger's, and on the opposite side of the Schuylkill, and is more inaccessible on account of the river Schuylkill; I don't know of my knowledge of any other sales."

2. The Court erred in admitting the following testimony of Anthony F. Miller: "I own a small tract near Mr. Hiester's, within 200 yards of his; sold a part; my part on track lies in the city altogether; I sold a seven acre lot adjoining Mr. Hiester's; obtained $500 an acre; for tracking purposes; no improvements; made this sale about seven years ago."

3. The Court erred in answering as follows the defendant's first point: "If the plaintiff has been put to any inconvenience on account of the crossing mentioned in this point, the plaintiff would be entitled to recover such damages as the jury thinks he deserves."

The following opinion was rendered by the Supreme Court at the decision of the case:

THOMPSON, J.—The first and second assignments may be considered together; and they arise upon bills of exception to the admission of that portion of the testimony of Richard Boone and Anthony Miller, objected to by the plaintiff in error and admitted by the Court.

After the witness Boone had expressed his opinion of the value of the plaintiff's land, through which the defendant's road passes, and that this was his judgment from sales of other lands in the neighborhood, he was inquired of against objection by the defendant, "what sales of land he knew of in the neighborhood of Reading, in which $300 an acre was realized?" In answer to this he said "that L. Mulsberger had sold five acres to one Bushong for $300 an acre; this he said he was told by Bushong himself. And further, that, in a settlement with the Lebanon Valley Railroad Company, about four years ago, with Lietzinger's estate $350 per acre was paid. This land was farther off than Hiester's and on the opposite side of the Schuylkill."

We cannot hesitate to say that this evidence was improper, and should not have been received. The hearsay portion of it was not objected, specifically, and had there not been a graver error in the admission of the answer in other particulars, it would scarcely have been worth noticing; as it stood it was erroneous under the objection made. The subject of inquiry before the jury was to find the value of the plaintiff's land per acre, and especially that portion of it taken by the defendants. This was to be ascertained by the application of certain tests; its value as estimated by witnesses, in view of its location, productiveness, or other uses, not speculative, or by the market value, or more properly, the selling price of land in the neighborhood. This last test was approved in Searle *vs.* Lackawanna and Bloomsburg Railroad Company; and it is there said that sometimes the value cannot be ascertained in any other way. There certainly can be no objection to this test, but the evidence received went far beyond it. It did not pretend to fix the market value of the land, but assumed to ascertain it by the special, and it may be, exceptional cases named. This will not do, for if allowed, each special instance adduced on the one side must be permitted to be assailed, and its merits investigated on the other; and thus would there be as many branching issues as instances, which, if numerous, would prolong the contest interminably. But even this is not the most serious objection. Such testimony does not disclose the public and general estimate which, in such cases, we have seen is a test of value. It would be as liable to be the result of fancy, caprice or folly, as of sound judgment, in regard to the intrinsic worth of the subject matter of it; and consequently, would prove nothing on the point to be investigated. The fact as to what one man may have sold or received for his property, is certainly a collateral fact to an issue, involving what another should receive, and if in no way connected with it proves nothing. It is therefore irrelevant, improper and dangerous. Not so with a market value. This is recognized as a fair test. It holds good, let the demand and supply be as they may, and is equally reliable, whatever may be the relative value of money and property, or the circumstances of the country. It is supposed to represent the judgment of the community, and approximately fixes the value of a given article or thing, as it may do the character of a person. The practical application of these principles is recognized in Chapin *vs.* Boston and Portland Railroad Company; Upton *vs.* South Reading Railroad Company; Wyman *vs.* Lee & Camb Railroad Company; cited by the counsel for the plaintiff in error, and in Searle *vs.* Lackawanna and Bloomsburg Railroad Company, cited by the defendant in error. Had the proposition been made by the defendant to prove that some designated owner had received, by compromise or otherwise from some railroad company, for land alleged to be as valuable as that of the plaintiff, the sum of $5, $10, or $50 per acre, for the purpose of establishing what the plaintiff should, in this case, be obliged to put up with, I can imagine that it would have somewhat astonished the Court; yet it is the same thing in principle as the evidence received, perhaps only a little more palpably erroneous. But if the plaintiff be allowed to introduce such testimony, every principle of even-handed justice would require that the defendant should have the same latitude. The rules of evidence, however, do not allow it to either party. The question might be proper by way of cross examination, to test the accuracy of the witness, but not otherwise. A jury would be very much inclined to say, upon such testimony, that if one man receives so much from one railroad company, another ought to receive the same. The inquiry would thus be, not to ascertain the value of the land taken, which the law requires to be compensated, but what was the highest penny wrung from a corporation without regard to value. This the law does not allow. Compensation in full is what the constitution requires, and the ascertainment of that it leaves to the law and the Courts, upon the usual and known rules for estimating and fixing what that shall be. The testimony of Miller so far as objected to, was of the same character as that of Boone, and was inadmissable for the same reason. The first and second assignme of error are therefore sustained.

The second assignment of error is to the answer of the Court to the defendant's second point. The answer allows the jury to consider the damage incident to the taking of the land arising from inconvenience in crossing the road, and interference with crossings already established. This we think was right. In this particular, damages should not be included for making the crossings themselves, for they are to be made by the company, but for the damage by the reason of their not having been constructed. As it was the duty of the company

to construct them in the first instance, without any demand, damage for not so doing, commensurate with the injury, is an incident of the taking, and may be allowed. Notwithstanding this, the company continues liable to construct convenient causeways or crossings, if required; or in default thereof, the plaintiff may proceed to recover damages in the manner provided for by the act, as well as to indemnify him for such non-compliance. To save future controversy, it would be well that the verdict should set forth the grounds of the finding. We do not see, however, that the Court erred in the matter of this exception.

The fourth error is assigned upon the ruling out of defendant's testimony to prove that the plaintiff had offered, that if the company would locate the road where he might wish it, he would claim no damages; and that at some time afterwards, when the company called upon him to designate the location he desired, he declined doing it. It is too plain for elucidation that the testimony proposed was but an unaccepted proposition, not binding. The company did not accept it when it was made, and the plaintiff was not bound to adhere to the offer for a moment afterwards, if he did not choose to do so, much less for days or weeks. He was in no respect bound or answerable for not adhering to this offer. The testimony was properly overruled. For the errors designated in this opinion the judgment must be reversed.

Judgment reversed, and a *venire de novo* awarded.

Steam Navigation.

We notice with satisfaction the indications of largely increased steamboat facilities for transportation of merchandise and passengers from and to the city of Boston—to be developed by the enterprise and capital of our city the ensuing year.

Among these enterprises, is the establisment of a line of steamers to Liverpool, with a capital of $5,000,000—to be organized in part by the same parties, as we are informed, who had established a line—for which two fine sea-going steamers have been built in Boston—to New Orleans. This New Orleans line was started under some discouragements, but we learn that after making large dividends, the stock of this company is now sought for at one hundred per cent. above par.

We are also specially pleased to observe that a permanent line of steamers—boats safe and competent for all weather—is to be established between Boston and St. John, New Brunswick, touching at intermediate ports. This line will be sustained by Boston capital mainly—under a company to be organized, under a special act of the Massachusetts Legislature, granted at its present session, with a capital, if required, of $2,000,000. This enterprise has been projected by some of our most active and enterprising merchants, several of whom are named in the act of incorporation. In advance of an organization, several gentlemen who have projected this scheme have (to occupy at once the route, which promises to be from its start profitable,) purchased two very fast iron side-wheeled boats, that formerly ran between Holyhead, England, Dublin, and Ireland. These boats have the reputation of running fifteen miles an hour in all weather.

We understand the charter of the United States Steamship Company was obtained with a purpose to build, in Boston, two large splendid sea boats to accommodate hereafter the anticipated increase of business on this route. Should this not be realized, as we fully believe it will be, we understand the charter of the company authorizes them to occupy routes to the gulf ports, the West Indies, &c., &c., or to charter or sell to the U. S. Government. We have seldom had occasion to notice a Boston enterprise that combined in its outset more of the elements that go to make up a profitable and successful corporation.—*Boston Traveller.*

Washington and Alexandria Railroad.

It is understood that the Washington and Alexandria Railroad Company have concluded a contract with Post & Co., bridge builders of New York, for the erection of their intended bridge across the Potomac. It will be built along side the present Long Bridge.

The Leased Route to Buffalo—Contracts Signed.

The contracts in the matter of the lease of the Elmira and Williamsport Railroad by the Northern Central Railroad Company and of the Buffalo, New York and Erie Railroad, by the Erie and Northern Central Railroad Companies, the Pennsylvania Railroad Company being also a party in the compact as lessee of the Philadelphia and Erie Railroad, and also in her own behalf, were signed in this city on Thursday last. On the first of May, the agreement will take effect; and, thereafter, the "favored nation clause" will assure advantageous intercommunication between Philadelphia and Baltimore on the one part, and Buffalo and Rochester—Canada and Lake Ontario—on the other part.

As consummated, the scheme, instead of being a measure to regulate a blockade at Elmira, (as was feared when the original field of negotiation was bounded on the North by that point,) comprehends a broad commercial policy, and contemplates a diversified intertrade with Western New York, Buffalo, Rochester and Canada West.

In the movement of lake commerce, Buffalo is a main portal at the end of Lake Erie as Chicago is a main portal at the end of Lake Michigan. With its influence reaching to the lakes at Chicago, Cleveland, Erie City and Buffalo, the Pennsylvania Railroad Company will participate on a larger scale in the business of the Northwest.

The first and immediate gainer from this ramified negotiation is unquestionably the Elmira and Williamsport Railroad Company, which, for the term of nine hundred and ninety-nine years, is assured of interest on mortgage (road and basin) bonds and preferred stock, and, we believe, five per cent on common shares and chattel loan, the whole annual guarantee amounting to or about $165,000, equal to six per cent on a principal sum of $2,750,000. The length of the Elmira and Williamsport Railroad is 78 miles.

"Solitary and alone I roll this ball," said the Hon. Thos. H. Benton, when he introduced his famous expunging resolution into the Senate of the United States, and by perseverance compassed its passage. "Solitary and alone I roll this ball," said Thomas Kimber, Jr., mentally, when he set on foot a negotiation which enlisted powerful coadjutors, and finally achieved a legal result that augurs important consequences.—*U. S. Railroad and Mining Register, April* 18.

Railroad Earnings—Weekly.

The traffic of the Great Western Railroad for the week ending April 10, 1863, was as follows:

Passengers	$22,210 05
Freight and live stock	42,472 11
Mails and sundries	1,304 01
Total	$65,986 17
Corresponding week of 1862	51,654 11
Increase	$14,332 06

The earnings of the Michigan Central Railroad for the 2d week of April, 1863, were $52,269 48
Same week, 1862 ..... 36,717 40

Increase	$15,579 08

The earnings of the Cleveland and Toledo Railroad for the 2d week of April, 1863, were $31,114 00
Same week, 1862 ..... 20,298 00

Increase	$10,816 00

The earnings of the La Crosse and Milwaukee Railroad for the 1st week in April, 1863, were $15,245 60
Same week, 1862 ..... 9,351 48

Increase	$5,894 12
Second week in April, 1863	$22,027 78
" " " 1862	9,925 58
Increase	$12,102 20

The earnings of the Chicago and Alton Railroad for the 2d week of April, 1863, were:

Passengers	$12,574 05
Freight	21,718 34
Sundries	1,035 83
Total	$35,328 22
Same week last year	17,165 15
Increase	$18,163 07

	From Jan. 1 to April 15. 1863.	1862.
Passengers, freight, etc.	$376,926 97	$252,314 51
Military	34,495 90	84,107 18
Total	$411,422 87	$336,421 69
Increase	$75,001 18	.....

The earnings of the Galena and Chicago Union Railroad for the 2d week of April, 1863, are:

Freight	$20,948 51
Passengers	8,667 91
Mails, etc.	1,250 00
Total	$30,866 42
Same week, 1862	19,931 93
Increase	$10,934 49

The increase for two weeks is $20,810.

The earnings of the St. Louis, Alton and Terre Haute Railroad for the 1st week in April, 1863, were $26,273 20
Same week, 1862 ..... 15,509 87

Increase	$10,763 33

The earnings of the Chicago and Rock Island Railroad for the 2d week of April, 1863, were $28,283 00
Same week, 1862 ..... 15,492 00

Increase	$12,791 00

The earnings of the Chicago and Northwestern Railway for the two weeks ending April 14, 1863, were $42,194 91
Do., 1862 ..... 23,521 34

Increase, 79 per cent.	$18,673 57

The earnings of the Toledo and Wabash Railroad Company for the 2d week of April, 1863, were $33,221 48
Same week, 1862 ..... 18,568 88

Increase	$14,652 60

The Michigan Southern road earned the second week in April an increase of $18,000—or $33,000 for the two weeks.

The earnings of the Illinois Central Railroad for the 2d week of April, 1863, were ... $65,676 02
Do., 1862 ..... 49,487 50

Increase	$16,148 52

The earnings for the two weeks of April were $121,404 35, against $85,558 98 last year.

The earnings of the Milwaukee and Prairie du Chien Railroad for the 2d week of April, 1863, were $19,042 27
Same week, 1862 ..... 9,659 04

Increase	$9,383 23
